"Mr. Coongate," said Steve, almost reverently, "I haven't been a game warden very long. So maybe I won't contaminate you."

"In that case, maybe you ain't tainted yet. But get me into Hedron fast."

As they drove along, Jeff drew himself delicately away from the young warden as far as the seat would permit.

"Aren't you a long way from home?" asked the game warden. "What brings you here from Privilege?"

"I ain't accustomed to answer questions, son. But since you're new, I'll tell you: I come over here to see a sick friend."

Steve chuckled in his disbelief. "Did you find the friend well?"

"No. Didn't find him at all. So I come on back. He's prob'ly in Hedron."

Steve rapidly guessed at the miles the old man had covered afoot that day. It was incredible! He glanced with increasing respect at his passenger—and at the high lights on the rifle between his knees.

"Mr. Coongate," said Steve, "who is your sick friend—?"

Although disdaining the impertinence of the warden's questioning, Uncle Jeff decided to be tolerant. The boy was young, and would grow up to have trouble enough.

"Tom Compus Mentis," said Jeff.

"Who? Did you say—? Why, Tom Compus is a friend of *mine!*"

"No, son. It ain't possible. No friend of mine could be the friend of a game warden. It jest wouldn't work out."

"It was when I was little," Steve hastened to explain. "Old Tom showed me the forests, and made moccasins for me. And—but—! Say, wait a minute!"

Drawing the car to the side of the road, the warden stopped, and glanced at his saturnine passenger. "Tom Compus Mentis *is* at home, Uncle Jeff. I just left him in his shack, ten minutes ago! How come I didn't meet you on the road?"

These tidings had a sharp effect on the one-eyed poacher. He feared the worst. "When I left Tom's shack, I cut through the woods to the road—where you picked me up. That's why we didn't meet. How'd you happen to drive Tom home?"

"He couldn't walk too well."

"Was he drinkin'?"

Steve nodded. "Yes—Hackett's restaurant. The Hacketts had him in a booth, and they were loading his drinks."

"Let me out of here!" said the old-timer.

Steve Ireland reached across and opened the car door, and the outlaw of

Mopang Forest disappeared in the darkness toward Tom Compus Mentis' shack.

Driving on toward the warden's cabin on Hedron's outskirts, Steve Ireland smiled elatedly. It seemed dead certain that his first solo assignment was going to be a success—with cream and sugar on top! He was holding a fistful of aces. Through the rain-wet window of Hackett's restaurant, he had seen the Hacketts lay a map of Hedron Lake under Tom Compus Mentis' eyes, and he had seen the sad, old Indian, dazed with drink, point to a hidden inlet in Anchor Island Cove. Now, *why?* What with moose meat selling for a dollar a pound, Steve thought he knew. He also thought he knew why the one-eyed poacher had appeared in the Hedron district. What a chance, thought Steve. Mine, all mine: To gather in the butchering Hacketts, and the legendary Uncle Jeff Coongate—all in one swoop! What a tale to tell the chief warden! The arrests would be simple if he just remembered the advice old Tom Compus Mentis had given him when he was a boy: Look, listen, be still, and wait long in the nighttime. . . .

In Tom Compus' shack, Uncle Jeff Coongate was indulging in similar, if craftier dreams. He had built a fire in Tom's stove, and made tea, and as he fed the Indian steaming spoonfuls, his heart was big with forgiveness.

"Hacketts make me tell about moose," Tom moaned. "Awful sorry, Jeff."

"Now, jest you rest easy, Tom. I aim to get that moose, jest the same."

Uncle Jeff's one eye rolled beatifica as he put together the pieces of his gr est and simplest conspiracy. In a si trick, he would wreck the Hack avenge Zibe, outwit a game warde a nice, pleasant new one—and posse moose. Poor old Zack Bourne wo shrivel and grow the green mold of e

"Tom," said Uncle Jeff, tende "'member what you used to tell when we was huntin' an' trappin' gether, in the old days? 'Look, listen still, an' wait long in the nighttime.' W sir, Tom—that's what I aim to do."

"Look out new warden, Steve Irel He smart."

"He did seem above average, fo warden," mused the one-eyed poac generously. "Now, tell me how he c on you tonight in Red Hackett's pla

The Indian told his story. It wa Uncle Jeff had surmised. Putting two two together, the young warden woul on the Hacketts' trail.

"An' wouldn't that boy jest lov catch me, too, Tom? Why, think w it'd mean to him! The Hacketts, an' Jeff Coongate, with a moose down singlehanded."

Blissfully, the old woodsman slipp spoonful of hot tea between the Ind lips. Tom swallowed it unhappily.

"You bring old Tom little rum, J he implored.

"Yes, a little, Tom. But not now." fore retiring, Uncle Jeff patted his fri shoulder, and added philosophic "Man cannot live by breath alone.

BESIDE the deadwater, beyond hidden inlet in Anchor Island C Steve Ireland waited long in the n time, and loneliness invaded his h Perhaps, in his zeal, he had assume much. Perhaps the Hacketts were s cious, and old Jeff had gone his k way homeward to Mopang. Perhap moose was a myth—but there wa mistaking the great creature's trac was, thought Steve in awe, as long snowshoe. But when would the H etts make their kill? And where wa one-eyed poacher?

Steve visited Tom Compus Menti day, and casually inquired.

"Jeff Coongate vanish," said th dian, and blew to indicate a pu smoke. He spoke the truth. He h seen Uncle Jeff since that rainy nig

Guess I must have scared him thought Steve, with no special co tion, as he resumed his vigil.

The fifth night began like all the ers. In the dense cedar growth, i darkness, the Big Silence weighte spirit. He heard a mouse in the le and tried to guess whether it was ne far. He heard a loon calling, then si again, and the night wrapping around him like a shroud. And unmistakably, the soft, hollow thun a paddle against the gunwale of a c

He tried to locate the sound. couldn't be sure of the distance—bu direction was to his left. He lay wa his heart pounding. He rememb what the chief warden had told "You'll be alone, Stevie. It won't ev as nice as Anzio beachhead. Be there won't be any U.S. Army ar you."

The first rifle shot came from the deadwater, around a small about three hundred yards away. echoes rolled back from the ridges died, and then Steve heard the s shot. He inched up on his hands knees and crawled across the base little point to the edge of the deadw he lay still. He knew the Hacketts waiting—and he steeled himself to longer.

Not over thirty yards away, he match flare. He shivered to think close he had figured it. Next he sa steady glow of a lantern, and hea sound of men moving. He squirm ward the lantern, his service pis

his right hand, his flashlight ready in his left, in case they heard him and kicked out the lantern. Then he stood up and walked in, his gun ahead of him.

They had the big moose down. His head was pointed toward Steve, antlers palmed out wide. But—not a man was in sight! The young warden realized too late that they had trapped him into the light. He started to jump back. A crack on the side of his head made him see star shells, and he lunged forward, hitting with his elbows.

SOMEONE got an arm lock on his throat. He saw a man's head within reach, and he whipped it with his gun barrel, and felt the barrel hit solid. The man went down. But there were two others. One had the arm lock, and was bending his head back. The other stood in front, with a rifle at his hip, the muzzle on Steve's belt buckle. He wondered if they would finish the job, or knock him cold. He would never be able to identify any of them in court. . . .

The arm lock tightened, and Steve felt himself blacking out. Then, to the right, he saw a jet of orange flame, and heard an explosion like a howitzer. He was sure he smelled black powder. His vision cleared. The man in front of him wasn't holding a rifle any more. It had disappeared, and the man was hugging his wrists to his sides, and howling with pain.

A flashlight blazed where Steve had seen the flame of the rifle, and a man of majestic height stepped calmly forth from the cedars. The flashlight he carried was the long, heavy, five-cell variety, and he flashed it in the eyes of the Hackett whose arm lock had but lately loosened from the young warden's neck.

"I jest wanted to make sure," said the splendid voice, "that you was Red Hackett." With that, the one-eyed poacher brought the flashlight down solidly on Red Hackett's head, and Red settled deeply into the moss.

"Jeff Coongate!" said Steve, dazedly.

"Yes, son. What's so strange about that?"

Steve laughed in a kind of nervous relief. The one-eyed poacher examined his flashlight, grinning at its dented barrel with superb malevolence. "That's one for ole Zibe," he muttered, and straightway began trussing up the Hacketts with the assistance of Steve Ireland, one pair of handcuffs and the rawhide laces from his own moccasins.

Two hours later, the three Hackett brothers were in the Hedron jail, and Steve had telephoned his chief long-distance. A few minutes after that, in the warden's cabin, Steve Ireland was playing host to Uncle Jeff Coongate. He was impressed by a subtle change which seemed to have come upon the old woodsman. There was an air of meekness, almost repentance, which he had not noticed before.

"Mr. Coongate," said Steve, gratefully bringing out a bottle, "here's some rum. Don't know if you care for the brand. It's Hernando's Fiery Dagger."

Steve was further disarmed by Uncle Jeff's elaborate refusal of the beverage. Masterfully concealing the gleam in his eye, Jeff had waved the bottle away. "No, son—no, thanks. Not after what we went through—together—tonight."

Quite clearly, thought Steve, the old outlaw was undergoing a strange transformation. His attitude and behavior were unprecedented.

"Uncle Jeff," said Steve, haltingly, "—I want to thank you for getting me out of a tough spot."

Uncle Jeff's eye lowered in humility. He sighed. "That's all right, Steve. I—I—" There was here a damp sniffle. "—I guess I owed you that—for all the wardens I have mistreated, all these years."

An astonishing light began to dawn upon Steve Ireland. The one-eyed poacher of Privilege, at last having seen the error of his ways, had this nigh barked on the trail of reform!

"Uncle Jeff! You mean—?"

Uncle Jeff sat with head bowed spoke with apparent difficulty, things which stirred in him deeper finer, emotion.

"It just come over me, son—that when you picked me up on the True, I'd come to Hedron Lake that moose. I knowed them Ha was after the moose, too, an' tha was after the whole of us."

"That's right, Jeff. I was. But—

"Wait, son," said Jeff, daintily rupting. "I got to say it all, nov started. You see, layin' out there long night: it come to me that yo one man agin four. It wa'n't fair, an' it got to preyin' on me, w knowed what them Hacketts wou to you—if they got the chance."

"They almost did, too," said wryly, "only for you."

"Yes, they almost did. But I d to fight on the side of the law—f first time in my life, son. An' it—i of bored into me, an' squirmed 'i an' give me a good feelin' that I had before. I—I'm a changed ma

To Steve, there was no deny The evidence was in the downca devoid of lethal gleam, and in the ing and repentant shoulders.

"Well," said the old woodsman, to his feet, "I guess I'll be goin', got to tell Zack Bourne about this. I ain't sure how he'll take it."

"Wait. Don't go. Let me driv back to Privilege. Why, it's almos o'clock in the morning, Jeff!"

"No," Jeff solemnly declined, like I need to be alone, tonight. make it acrost to Zack's cabin, ti breakfast. Besides, Steve, you'd to get a night's rest, after that exp tonight. So long, son—an' good

WITH that, the gaunt, and so saintly figure disappeared i night, and Steve Ireland turned i few hours, till the chief warden a Not long after daylight, they wen with a team to haul the carcass moose to the nearest hospital, delectation of the patients' diet.

As they stood looking down moose, Steve concluded his narra the night's adventure with the de Uncle Jeff Coongate's reformatio chief listened warily. Once or tw fore, the old poacher had reform the backsliding therefrom had m forests ring. But this time, it se sure thing. The outlaw had saved warden's life, at risk of his ow given his strength to the side Could it be true that, at last, the case of the State vs. Coongate was

"And just imagine," said Steve old-timer footing it clear to Mo the dark, at three in the morning!"

"He's better than nine tenth man," admitted the chief, as he be the moose. "They don't make old Jeff, any more. He—why, b villainous old soul! Reformed This moose has been bled, and out, and the hide folded back on

at sea we weren't engaged, darn it. ut I was getting very mindful of the that I was not getting any younger. as, in fact, getting along toward ty. Before the war, twenty was esished in Maple Corners as the age nd which you married, went off to ge, or began studying for spinsterd. Custom in Maple Corners can sur- any old war. And it did not help n Doc Gibbons yapped at me about shirttails. If I had been at Vassar or h Lawrence I could let my shirttails free and nobody would say a word. so in Maple Corners.

it was in a foul and futile mood that pped onto a stool in Herman Goods drugstore and ordered a double . I swung my pigtails angrily and ebody right beside me said, *"Ouch!"* ked around, and into the handsomface I had ever seen in this town, pt at a movie.

'm sorry," I said. "Did it hurt?"

Have you ever been slapped in the by a tightly braided pigtail?" he d. "It hurts."

said I was sorry," I reminded him. uld I go home and shave my head?" smiled. Golly. I would have said as thirty. A young thirty. "Dear me, no. I think girls ought to wear pigtails until they are eighteen at least. I was delighted to see pigtails come back."

"Providing they are controlled?" I said. I gave it to him throatily, and he looked at me harder. I realized that—until just then—he had thought I was considerably under eighteen. So I drew a deep breath to make my shirt fit better.

"I'm Larry Mitchell," he said. "The new doctor here."

"I feel swell myself," I told him, "and you've picked a terrible market for your talents. The town has three doctors and there must be twenty in the county."

He nodded pleasantly. "I've talked with them all. They were very kind. They admit to getting along in years. Several intend to retire in the next year or so. There will be room here for two or three young doctors."

"The old codgers told you that?"

"Yes, indeed," he said brightly.

"Gulliver's Travels. They will mow you down. Those ancients have been retiring for fifteen years that I know of."

I WAS all set to tell him the facts of life when in comes Ed Ferguson. I introduced them. "Ed, tell Doctor Mitchell how much trouble *you* have just visiting the sick to say hello." But Ed is entranced at the idea of a new doctor.

"Don't mind Hazel," he said. "She's cynical. Let's sit over here at a table."

We had just hit the cane bottoms when Ed looked Doctor Mitchell in the eye and inquired, "What is your theory about multiple sclerosis?"

I tried to ease the shock. "Ed is very interested in medicine," I explained.

"I'm afraid I don't have a theory," said the new doc. "Not much is known as yet. Some studies indicate—"

"It attacks people in the largest numbers between the ages of twenty-five and forty-five. Does that suggest anything to you?" This was Ed, of course, not me. "It could be a recurrence of some childhood disease, believed cured. Also, the upper age limit suggests that possibly some chemical change, taking place in middle life, *prevents* the disease. I'm giving it a lot of thought."

"Let me know your conclusions," said Doctor Mitchell, a little wildly. But just before he escaped he didn't forget to ask my name.

"Hazel Tuttle," I said promptly.

"Miss Tuttle, they tell me there is a dance tomorrow night at the Grange Hall. I would be honored if I might take you there."

"Just a minute—" Ed said.

But I cut him off. "Eight o'clock, Doctor Mitchell. Ask anybody where John Tuttle's house is."

When Doctor Mitchell had left, Ed said, "What was the idea, anyhow? Why did you say you'd go with him?"

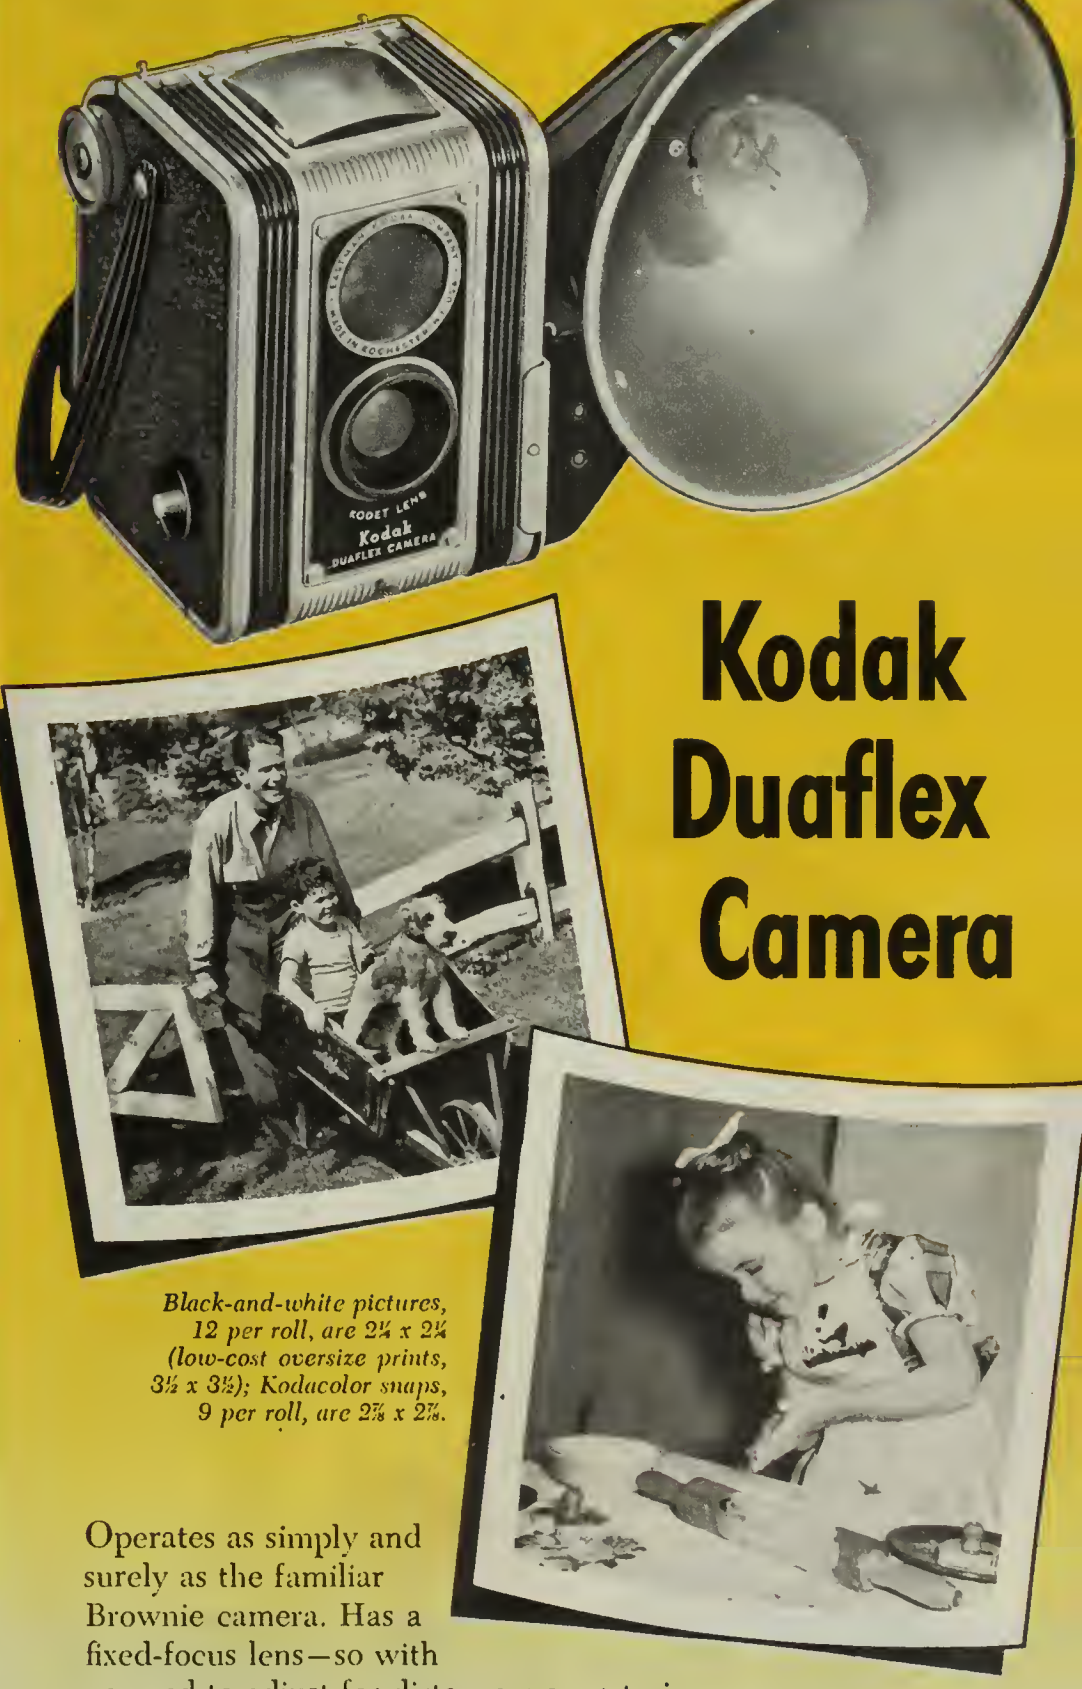
"Because he asked me. Nobody else has asked me yet."

"It's understood that I'd ask you," Ed said logically. "Aren't we engaged?"

"That is a moot point which is getting mooter all the time," I said. All of a sudden I was fed clear up to the eyebrows with the Maple Corners philosophy which Ed had just expounded. "I don't know as engagements just ought to go on and on, with everything 'understood.' Maybe engagements ought to be renegotiated once in a while."

Ed looked flabbergasted. "Hazel, do you feel bilious?" He started to feel my pulse but I yanked it out of reach.

"I'm not bilious," I said.



"Then you've fallen for that guy. I bet he hasn't been out of his intern's jacket a month."

"I bet he looked cute in it," I said. And then I was sorry I was being so mean. You know how it is. "Ed, I don't

Everybody's "good" with this new-type Reflex Camera

The large, brilliant finder shows you your pictures, good and big, bright and clear in every detail, before you snap . . . easy to get everything just right.

You get snapshots as big as with the most expensive reflex camera. Splendid black-and-white ones outdoors and—with accessory Flasholder—indoors as well . . . day or night. Full-color snaps, too, in direct sunlight or indoors with blue flash lamps.

Kodak Duaflex Camera

Black-and-white pictures, 12 per roll, are 2¼ x 2¼ (low-cost oversize prints, 3½ x 3½); Kodacolor snaps, 9 per roll, are 2⅞ x 2⅞.

Operates as simply and surely as the familiar Brownie camera. Has a fixed-focus lens—so with no need to adjust for distance, you get nice sharp pictures from 6 feet to infinity. Unquestionably today's outstanding camera buy. Complete with protective shield and handy neck strap, $11.75 plus tax; Kodak Flasholder, $2.50 plus tax . . . At your favorite Kodak dealer's.

C. P. R. Co. 1948

Fruit Bavarian

2 tablespaans gelatin
2 tablespaans cold water
1 No. 2½ can fruit cacktail
2 tablespaans lemon juice
3 egg yolks
¼ cup sugar
¼ teaspaon salt
3 egg whites
¼ cup sugar
1 cup heavy cream

Saften gelatin in cald water. Drain fruit cacktail; reserve fruit. Cambine juice, leman juice, egg yalks, sugar and salt in tap of double bailer. Caak aver hat water, stirring canstantly, until thickened. Add saftened gelatin; stir until gelatin is dissalved. Remave fram heat; caal until mixture begins ta thicken. Beat egg whites until stiff, but nat dry. Gradually beat in the ¼ cup sugar. Fald inta gelatin mixture. Whip and fald in cream and fruit cacktail, reserving ⅓ cup af the fruit far garnish. Paur inta ane large ar 8 individual malds. Makes 8 servings.

bject to your paying Libby twice what om and board is worth, but you could ve money if you didn't run that jalopy yours all over the country prescribing r relatives."

"I don't really prescribe for them," Ed id. "I just listen to their symptoms and metimes I can tell them what's wrong. metimes I just tell them they got what ey believe they got—and that makes n feel good, too. And I don't charge ything, of course. Besides, haven't u been going with me on Sundays?"

"Ed, on Sundays in Maple Corners a l gets desperate. More things happen girls on Sunday in this town than on y other day of the week." I took two nes out of my jeans and put them wn on the marble table for my double lt. " 'By, Ed. See you in the doctor ok."

WHEN Dr. Mitchell called for me the next evening he said, "I knew would look that way in a dress." But ving to the Grange Hall he seemed to e something else on his mind. Finally came out with it. "What kind of a ow is this Ed Ferguson?" he asked.

was cagey. "Ed's all right. Why?"

This morning I got my first call. Old ow named Ivan Staples up at the top the hill. Clear case of old-fashioned umatism, not uncommon in men of age at this time of year. But his wife sed to believe me. It seems Ed Fer- on had been there and told her that n had alcoholic neuritis."

Sounds reasonable. As a demijohn uoso Pop Staples has no local peer."

his did not sit too well with the new tor. "What interests me," he said, a e cool, "is that Mrs. Staples appeared egard Ferguson's diagnosis as profes- al. Does he go around telling people t is wrong with them?"

Incessantly. You might as well know ow."

Dr. Mitchell grunted. "It doesn't speak well for the intelligence of people und here. But I'm not going to let it ry me. As soon as I'm established I make very few house calls. They'll e to my office and I am going to run ough a maximum number of patients day. That's the way to make money k without wearing yourself out, like e old fellows have done. And when got a nest egg I'll open in a wealthy hborhood in some likely city."

You got it all doped out, hmm?"

le smiled down at me. "You bet I e, Hazel. And don't think I am go- to fool around with any patients who accept medical advice from man." I did not mention that such a se might help him very little toward nest egg. We were in front of the ge Hall and I wanted to dance.

e new doc was quite a dancer, and eing with him on his first social ap- nce in Maple Corners created no l stir. In fact, midway through the ing he said, "I have been advised at a dozen times already that you are ged to Ed Ferguson. I'm sorry I e of him as I did. If I had known—"

Think nothing of it," I said, because then I saw Ed Ferguson coming into Grange Hall with Sadie Druffer. She irty if she is a day and her reputa- is no low number, either. "Don't ve all you hear in Maple Corners," id, "because the newspaper is a dy and things happen daily. Ed and e just good friends, like divorced ie stars."

began to look as if I'd told the truth, use the following Sunday no Ed to pick me up for a jaunt of hunt- ailing relatives. But Dr. Mitchell ped by to ask me to go to the movies. n I saw Sadie Druffer there alone I much better. It meant that Ed didn't her along on his Sunday calls.

ter the movies, while we were hav- odas at the drugstore, Dr. Mitchell l, "Who is Libby Munz?"

"She's an aunt of Ed Ferguson's. He lives at her house."

"Oh, ho! So that explains why she cornered me on the street to tell me that you were just going with me to make Ed jealous." He laughed heartily, as if such a thing were preposterous. He leaned close. "What *is* the reason?"

"Just that I don't want to get one man attached to me, ever. I am just a selfish moth, thinking only of the moment, snatching at pleasure, heedless of the morrow when I will be faded and old."

"I am not going to take you to any more Joan Crawford pictures," said Dr. Mitchell peevishly. Then he told me that they had made him president of the Umatima County Medical Association to succeed Doc Gibbons. He was so pleased with himself that I did not have the heart to tell him that this always happened to new doctors. And that when the new doc decided none of the others was ever going to die and give him a little practice —when he found that out and moved on, why, Doc Gibbons would be reinstated.

"What does that Medical Association do, anyhow?" I asked.

"Why," he said, surprised. "Nothing that I know of. But it *could* do something. It has quite a bit of money, what with these old doctors paying dues for forty years and more. Maple Corners already has a good hospital. What do *you* think we should do?" He gave me an amused man-to-little-girl look, as if he did not for a minute expect any idea to come out of my pretty head.

I had an idea, all right. But inasmuch as he wasn't quite ready for it, I just didn't let him have it right then.

BEFORE the month was out it was clear that Dr. Mitchell was beginning to get some business for himself. People were calling at his office, like he said they would, and he wouldn't make a house call unless you were flat on your back and near the finish. Of course, not everybody was going to him—but there were more than had ever before cottoned to a new doctor. And it dawned on me like thunder that most of them were relatives of Ed Ferguson's!

A rodent aroma began tickling my nostrils. I knew for sure that Ed was not in on this. Whatever it was, Mitchell had figured it by himself. But what was it? I was soon to know—as they say in these historical novels where people keep hanging their costumes onto bedroom chairs.

When Libby got sick the week of the carnival I realized it was no kidding. She never got sick and she adored carnivals. She hadn't even got the sheets warmed up before Ed, with just a feeling that something was wrong, came running over from the post office. We met at the gate because I was taking Libby some prune preserves from Mother. "Hello," I said, "and how is Sadie Druffer?"

"She's fine. How's Mitchell?"

Looking back, I can see we should have called the game right there on account of darkness, but true love likes the bumps, and people are idiots. Ed just opened the gate and I walked through it, stiffly. We went in, and there was Libby in bed. "I knew it," Ed said, "you seemed peaked this morning at breakfast." He took her pulse, felt her forehead, looked at her tongue, and listened to her symptoms. "Libby," he said, "I don't like to say this, but you have the start of a serious thyroid condition."

"My lands!" said Libby. "If that's true, I don't feel so bad about missing the carnival. I would hate to miss the carnival for something piddling."

From the other side of the bed I said, "Libby, you better get a real doctor." Ed looked at me with semiprofessional pleasantness. He said, "That's right, Hazel. I *never* try to get in the way of a licensed physician."

"I sure feel sorry for the Flynns, cooped up in their house all week end!"

COLLIER'S DON TOBIN

I was trying to figure out just what he meant by that when Libby said, "Hazel, telephone that Dr. Mitchell. I been hearing he is a real good man." You could have knocked me over with a thermometer case.

"He doesn't like to leave his office," I said, "but I'll try."

I told Ed that I would stick around and that he ought to get back to his post officing. "Are you going to stick around to take care of Aunt Libby," he asked, "or just to look at Dr. Mitchell?"

"There is no reason why I can't do both," I said haughtily and went to the telephone.

Dr. Mitchell sounded very professional over the wire. "This is Hazel Tuttle," I said.

"Really, I can't talk with you now," he said. "Can you call me back after office hours?"

I managed to control myself. "I don't like to disappoint you, doctor, but this is not a woman mad for the sound of your voice. This is business. I'm at Aunt Libby's and she's very sick."

"Too sick to come to my office?"

"Flat on her back and out of her mind," I said. "Otherwise, why did she ask me to call you instead of Doc Gibbons?"

"I'll be right over."

When he got there I stayed in the bedroom to see what gave. "Well, well, well!" he said to Aunt Libby. "You certainly don't look sick to me."

"Never mind the bedside manner," Libby said. "Just get going."

So he used his stethoscope, he prodded gently, and occasionally he grunted to himself. Finally Libby couldn't stand it any longer. "Ed Ferguson says I got a thyroid condition."

"Yes?" said Dr. Mitchell as if he hardly heard. After a minute or two he took the stethoscope tubes out of his ears and leaned back in the chair, staring thoughtfully at Libby. "It looks as if Ed is perfectly correct," he said. "But no need to be alarmed. We've found your trouble in plenty of time, I'm sure. I'll send a prescription over."

Libby sighed. "Well, probably I would have missed the carnival anyhow. I don't like to go alone, and Ed is going to be busy at the post office every night this week because the mail-order catalogues have come in."

Dr. Mitchell got up, smiling and brisk. "Libby, you will be up and around by Saturday and I myself will take you—and Hazel—to the carnival."

I followed him out to the porch. "If you are kidding Libby," I told him, "you had better be careful. She will find strength enough to break your head."

He patted my shoulder. "Don't you worry. She'll be okay by Saturday."

WELL, when the prescription came I gave Libby the first dose and as I was putting the bottle into the bathroom cabinet, it just happened to fall into the washbowl and break to smithereens.

"What was that?" Libby called from the bedroom.

"The mouthwash," I said. "I'll just run down and get some more."

Herman Goodwin doesn't mind if you come around the corner of the screen that hides the prescription counter. In fact, he likes an audience. "It was clumsy of me to drop that bottle," I said.

"Not much harm done," said Herman, squinting at a five-ounce bottle professionally. "This isn't an expensive prescription. Only sixty-five cents."

"What is it?" I asked casually.

"Just a mild sedative. Guess Libby's been working too hard and the doc wants to slow her up a bit and have her get some rest." I could have kissed Herman then and there, but he is at that dangerous age where you could get a bad flash back, so I didn't.

When I got back I found Libby very pleased. "You know," she said, "I feel better already. So relaxed. It's nice to be in the hands of such a fine doctor. He knew right away that Ed was right. Land sakes, do you think I'll really be able to go to the carnival Saturday?" She yawned big. The pink stuff was making her forget the washing, all right. "Do you think if I went with you and Dr. Mitchell it would look like I was encouraging you to run around with him? But—my goodness, I'm sleepy!—Ed does seem to have lost interest, doesn't he?"

"I'm not quite sure," I said. "But I intend to find out pretty soon.". . .

That afternoon, while Libby slept, I telephoned Dr. Mitchell. Before he had a chance to go professional on me I told him about the idea I had as to what the Medical Association ought to do with some of its money.

"Very thoughtful of you, Hazel," he said. "But it doesn't make sense."

"It makes sense, all right. And when you bring it up before the association the old codgers are going to wonder why they didn't think of it before."

"Who said I was going to bring it up?" he spluttered.

"I thought you might want to," I said sweetly. "Particularly since you've been pretending to agree with Ed's diagnoses."

"That's a lie!" he shouted. "It's blackmail. Anyhow, you can't make malpractice out of it. How else was I ever going to snag a few patients in this loony community?"

"How else, indeed?" I agreed. "But I'll

You've always known that lemons are among the most healthful fruits. But did you realize that the juice of a lemon in a glass of water, when taken first thing on arising, is all that most people need to insure prompt, normal elimination?

No more harsh laxatives that irritate the digestive tract and impair nutrition! No more worrying: "Shall I take a laxative today or wait till tomorrow?" Lemon in water is *good* for you *every* day!

Generations of Americans have taken lemons for health—and generations of doctors have recommended them. They're among the richest sources of vitamin C; supply valuable amounts of B_1 and P. They help prevent colds. They alkalinize, aid digestion.

Not too sharp or sour, lemon in water has a refreshing tang—clears the mouth, wakes you up. It's not a purgative—simply helps your system *regulate itself*. Try it 10 days.

LEMON IN WATER

—first thing on arising

bet the old codgers wouldn't like it if they caught on."

"Hazel Tuttle, do you know what you are? You are—"

"Take it easy, Doc. Libby and I will be expecting you Saturday.". . .

Sure as shooting, Aunt Libby was all set to go to the carnival by Saturday. The prospect overcame her reluctance to chaperoning and condoning my proximity to Larry Mitchell. But if she had been a little more observant she might have noticed a glint in Dr. Mitchell's eyes that was not the reflection of incipient love. However, Libby was too excited over the carnival to notice anything else.

Larry took in the carnival in a manner thoroughly approved by Aunt Libby. She was unaware that he was hoping that I would fall off the Ferris wheel, get bitten by a poisonous snake, or simply break my neck by tripping over a tent stake. He started at the left-hand row of concessions and came up the line. Fat lady, ring toss, merry-go-round, kootchy dancers, snake charmer—the works.

It was probably lucky that there were no lady wrestlers. The doc might have thrown us into the ring. But male wrestlers they did have, and at the moment they featured a well-upholstered gent whose stomach looked like a stuffed laundry bag, and a face like wet wash. There was a hundred dollars for any plain citizen who could stay four rounds with this sweating apparition.

It was in front of this educational display that we met Ed Ferguson. He and Jake had handled the last of the mail-order catalogues and locked up the post office. Ed greeted us pleasantly enough and pointed to the wrestler. "He's got a glandular disturbance," he said, pointing. "Look at the way those folds of fat—"

"Ed," said Dr. Mitchell, sort of through his teeth, "I am glad we ran into you. The Umatima County Medical Association is going to write you a formal letter, but there's no reason why I shouldn't tell you now."

"Tell me what?" said Ed suspiciously.

"Ed, my boy, the association, of which I am president, has long noted your alert interest in medicine and considered your natural aptitude for a great profession. You are eligible to continue your higher education by way of the G.I. Bill of Rights but to insure an adequate and full medical training, unhampered by financial worry, the association—in meeting assembled and unanimously—has voted to send you through medical school."

Aunt Libby said, "For land sakes!"

THE barker was saying, "—and Bone Crusher McGee offers a curisp new one-hunerd-dollar bill to the man who can stay in the ring with him for only four—four, mind you—one-minute rounds—"

"You mean," asked Ed, peering at Dr. Mitchell, "you want me to leave Maple Corners and study medicine for five or six years?"

"Exactly. And the association intends to see that you do."

"Nope," said Ed. "I can't leave Aunt Libby. She depends on my board and room."

"That, too," said Dr. Mitchell patiently, "will be taken care of."

"You can go jump in the creek," Ed said, "without a paddle."

"I'm afraid I don't get you," said Dr. Mitchell.

"Well, I get *you*," Ed said. "You just want me out of Maple Corners so you can marry Hazel while I'm gone. So I am *not* going to leave Maple Corners."

It was then that bells rang in my head and my heart sang.

"You are crazy," said Dr. Mitchell. "Hazel here is strictly for laughs and I would not marry her if there was a bounty attached."

"Who you referring to?" asked Ed, getting his nose real close to Dr. Mitchell's chin.

"Hazel Tuttle. But that is not point. The association—hey, let go!"

They began shaking each other s The barker yelled down: "Gentlen gentlemen! If you wish to rassle acc ing to the rules of etiquette come up the arena. The Bone Crusher will re and the curisp one-hunerd-dollar bill go to a charity indicated by the win Are you game, gentlemen? And do ladies and gents in the audience a with my suggestion?"

The ladies and gents in the audi yelled approval and started crowdin and Larry toward the ring.

"You're scared to do it," Ed sai Dr. Mitchell.

"Lead the way, my psychotic frie said Dr. Mitchell. "I will pin your ping ears to the mat and then give the hundred dollars to have yoursel paired."

"Land sakes," remarked Libby a but she made no move to stop t Well, who did? Next thing I knew were in the ring in their stocking fee

"We better get out of here," said L in my ear. "They'll wind up fightin Bone Crusher and the barker for hundred."

ABOUT half an hour after we home, the doorbell rang. There s Ed on the porch, looking a little sil said to him, "You are suffering slight contusions and shock. Come

He followed me into the kitchen sat down shakily. "Where's Libby?"

"She's gone to bed. Remember thyroid condition. But she made tea for us—I mean you."

Ed rubbed the back of his thick "That Mitchell must've studied juj

"He also studied medicine. Like are going to do." I put Ed's wrist some hot water.

"I'm not going to leave Maple ners. You heard what I said. Som I'll have enough money so we ca married and take care of Libby, to

"Look, Hippocrates, didn't Dr. M ell tell you that the association wil you to medical school and watch o Libby while you're gone? And I some more news for you. With you money and the scholarship from t sociation you can take me with you.

Ed's jaw dropped. "You mean— ried?"

"I certainly do mean marrie thought surely that at this point he wrap his wet wrist, along with h one, around my soft and lovely But no. He stared off into spac said, "I wonder how come the as tion came to that decision?"

I had a good notion to haul off a him the truth—that the old c wanted to get rid of him for a whi didn't want him to come back u really knew his medicine. But I even tell him it was my idea. Selfle bility? Gosh, no! Psychology. who is smart out loud is just not

"Ed Ferguson," I said out loud, are sending you because you des go, and because Maple Corners n young doctor to come back and the torch of mercy." It was might to the truth, at that.

"Gosh," said Ed wonderingly. he looked at me, really at me. But freckled pan crept that look he get he is diagnosing. "Hazel," he said "you are going to have a baby."

So I slapped him across the mou purity.

"Hey!" he yelled. "I didn't that is, I meant when we're marrie felt of his lip. "You know som Hazel? You have given me a sub ous abrasion."

"I wish it was smallpox," I said

But I didn't mean it. I was in l very serious disease, beyond the of medicine.

THE END

CARELESSNESS . . . THE CHILD KILLER

Continued from page 17

ulation has been frayed for weeks, n months. In other cases parents had ced extension cords in rooms where ldren played. Babies, with their in- austible desire to taste everything, d chewing the cords—and were in- ntly electrocuted.

n one of the most tragic cases a young ther brought a small radio into the throom, placed it on the corner of tub, and plugged it in. Then she l her two-year-old daughter got into tub. They played, washed and ashed happily to the music. Suddenly child's hand darted out, knocking radio into the water. Both were killed tantly.

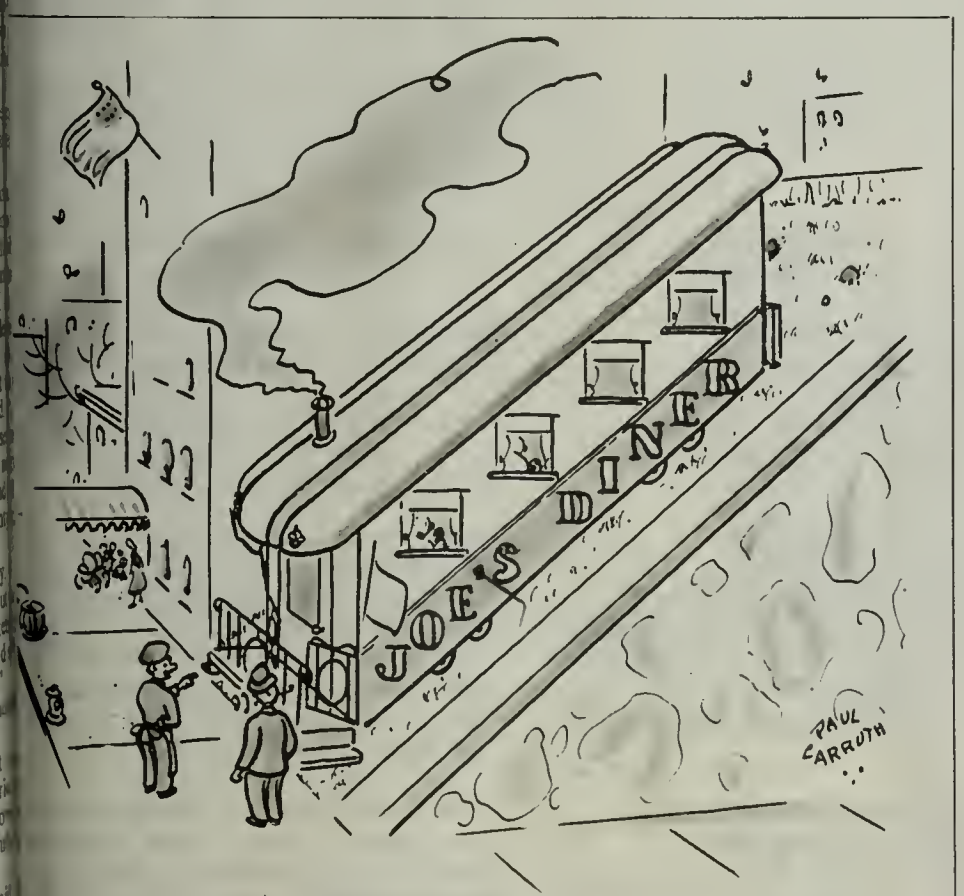
Water is, of course, a dangerously d conductor of electricity. Most trical appliances on the market have n subjected to numerous safety tests, l manufacturers are spending money stantly to make them still safer. But amount of workmanship, research, or ney can completely overcome care- ness. *Electrical appliances should be used where there are damp floors moist hands. Dry your hands and ch your children to dry their hands ore touching the bathroom switch.*

Grim Toll of Firearm Casualties

Last year more than 400 mothers and ers apparently did not know that s and cartridge shells can kill chil- n. They know this year. They left ols, guns and ammunition around re their children were able to get and them. Bureau and desk drawers clothes closets seem to be the favor- storing place, according to insurance pany reports.

ot many tots under five were killed his way, because toddlers haven't the ngth or the dexterity to fire a gun. in the five to fourteen age group, re the impact of the movies, the radio the comic magazines has been great, kids knew what to do with guns. You t and you pull. They killed brothers, rs, playmates—and in a few cases nts.

ometimes the parents thought the s weren't loaded. Sometimes the children thought they weren't loaded. It didn't matter. These guns all were loaded. And they were not locked up.



If you have a gun, lock it up.

Poison kills about 600 children a year —all but fifty of them under five. In children under five the inclination to taste everything within reach is at its height. In Los Angeles a five-year-old girl saw something that looked like honey. It tasted like honey. She ate quite a good portion of ant-killing poison before she was discovered and rushed to the hospital, where quick work saved her life. But many children are not so fortunate. To a tot who can't read, no amount of red-lettering means anything. Neither does a skull and crossbones. They will eat anything from arsenic intended for rats, to liquid weed killer—a cup of which a Pennsylvania parent left on a shelf. His son drank it.

Recently there have been a number of cases in which children consumed quantities of sleeping pills used by their parents. In White Plains, just outside New York City, a three-year-old swallowed 20 of her mother's sleeping pills, which a careless maid had left on the piano. When the mother asked for her pills, the maid couldn't find them. The child, smiling brightly for the last time, held up the box and said, "Empty, see? Empty, see?" Three doctors, working for several hours, could not save her.

All that was needed in all these cases was a little care on the part of adults. A small locked box would have saved many a life. If you must have poisonous drugs in your medical cabinet, keep them on the top shelf, plainly marked Poison!, and fasten adhesive over the top of containers so that no one will open them by mistake. Also, when you dispose of your poisonous drugs, empty them down the drain and wash the bottle before throwing it away. Children frequently rescue colored bottles from ash cans, and drink poison while playing doctor.

Failure to make simple household repairs is another frequent cause of death to children. Broken steps, shaky cornices, insecurely hung heavy mirrors, all contributed their share to the grisly toll. In one eastern suburban home a seven-year-

FAMOUS FOR MORE THAN A DECADE

old girl awaited Christmas with great eagerness. Every morning she met the postman, helped her mother open the family Christmas cards, and oohed and aahed over each. One evening she took the collection of cards into the living room, pulled up a chair to stand on, and began arranging them on the ornate marble mantelpiece. She leaned over too far and the mantel, which had been rocking dangerously for months, crashed forward, crushing her. Her parents had not followed a primary rule for safety in any household: *Fix it now.* They will never receive a Christmas card without remembering this.

Despite the apparently endless variety of ways in which children are killed at home and the apparently uncontrollable and unpredictable adventures of children, safety experts say that nearly all these deaths could be prevented. Of the 7,400 child fatalities in homes last year, over 5,000—roughly two thirds—were under five years of age. And nearly 2,000 were under one year.

What these figures mean is that during the first year of his life the possibility that your child will be killed by scalding, machinery, electricity and knives is extremely small because most of the time he is safe in his crib. His greatest danger is in being smothered by blankets, pillows or, in case he is taken into bed with them, by his parents.

But when he enters the crawling, toddling stage, he enters a very dangerous period which will continue until he learns to read and can be taught to recognize and avoid danger. This is plainly shown by the fact that while 5,000 children at home are killed in the first four years of their lives, only 1,800 die in similar accidents in the next nine years.

During this very dangerous preschool age, children are virtually helpless. They are beginning to talk, but words still mean very little to them. They are explorers and investigators with a tremendous desire to touch, feel, and taste everything in sight—and it's necessary for them to do these things as part of the process of growing up.

Do Not Relax Your Vigilance

They need safe toys to play with, and a safe, clean place to play in—an area from which you can remove all dangerous objects. Whenever they are not in this safe area, they must be given constant supervision. During this period they develop habits of imitation and repetition. Therefore, you must at all times set a good example—and watch for repetitions that, unharmful once, may in the end be disastrous.

To quote Pediatrics (the medical journal of doctors specializing in child care): "If a child does a hazardous thing and avoids disaster, he is likely to repeat the procedure. An illustration of this tendency to repetition was seen recently when a two-year-old was killed in a fall from a second-story balcony. The father said the child had been observed repeatedly climbing out of his crib, pushing a chair over to the balcony railing, and climbing up—yet nothing had been done to prevent what any person with knowledge of child behavior could have predicted would end tragically."

As the child grows older, the area which must be made safe for him broadens. It soon includes the bathroom, other bedrooms, stairs, the living room, kitchen, yard and garage.

Every home, to be made safe and kept safe for children needs regular inspection, according to safety engineers. Actually, you live in a complicated—and dangerous—piece of machinery, equipped with many conveniences, such as electricity, gas, a heating plant. But unless these conveniences are carefully maintained, they can be deadly to children. Obviously, such poor household practices as leaving shoes at the top of stairs, or throwing old razor blades where children can find them are equally dangerous.

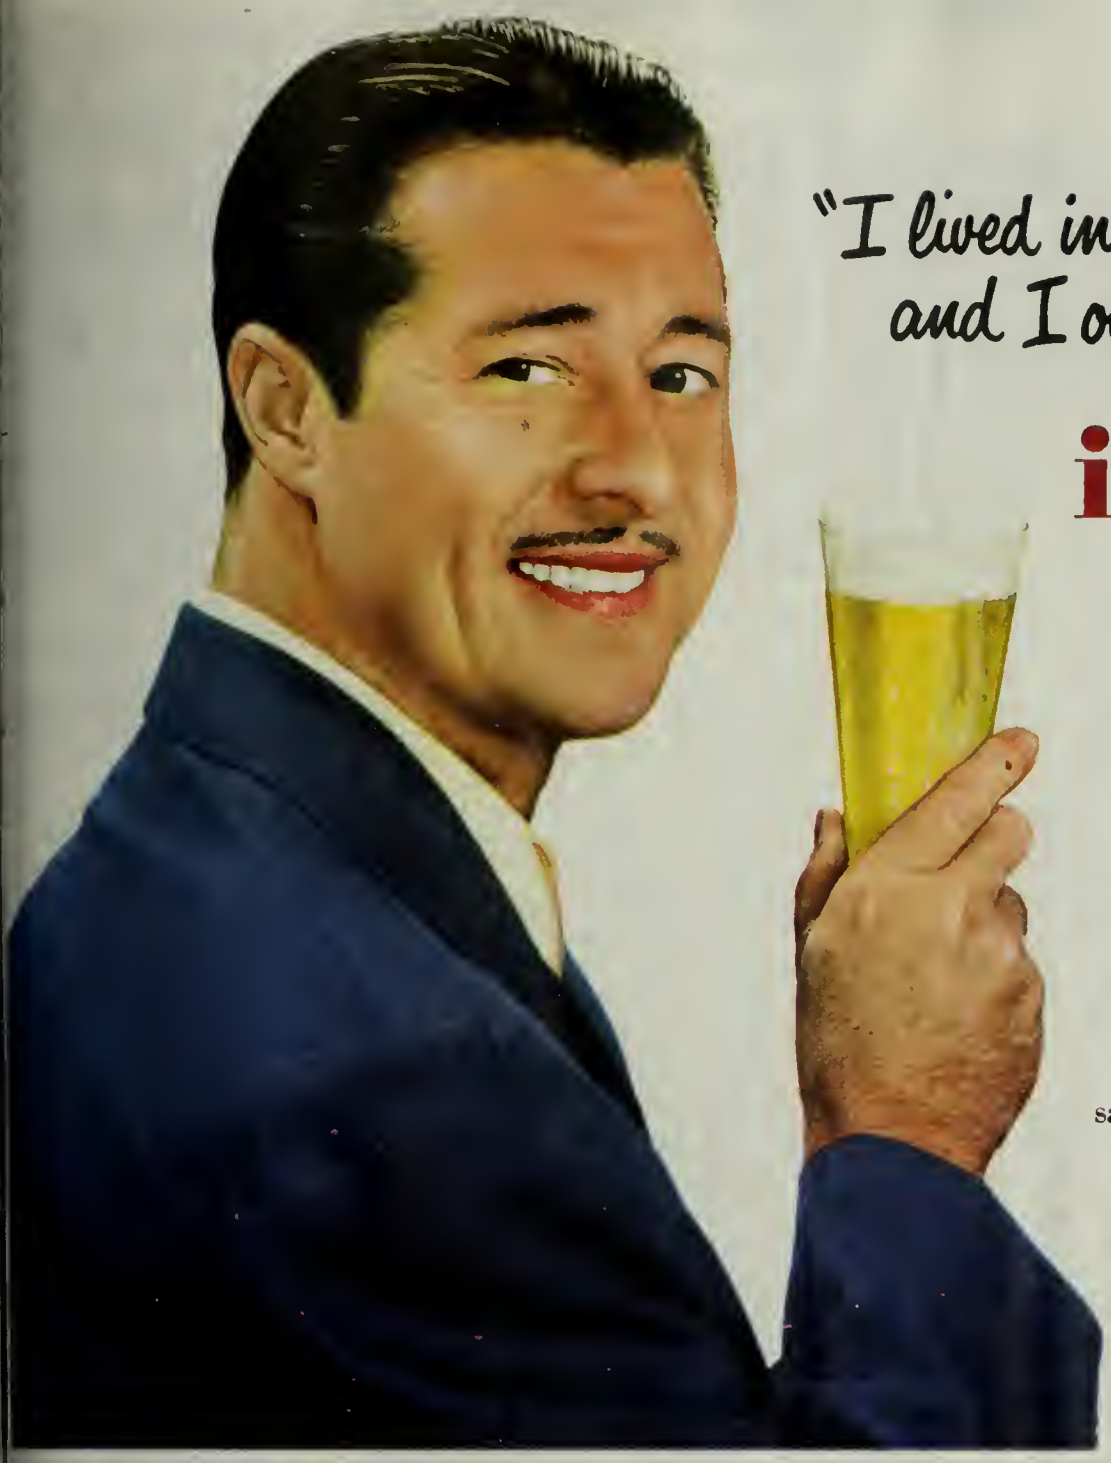
Questionnaires answered by the parents of 500,000 school children for the Greater New York Safety Council reveal the most dangerous practices in most city homes to be slippery floors and stairs, open closet doors into which people can walk in the dark, dry cleaning with gasoline at home, standing on chairs or boxes to reach high shelves, and the continued use of electric extensions and appliances that are in need of repair.

Happiness itself is a big factor in safety. Every child needs love, security and appreciation from his parents. An unhappy or neglected child is apt to express himself unconsciously by hurting himself *in order to get attention!*

Doctors have discovered that many accidents have not been due to mere awkwardness, or chance, but to emotional strain. In factories, for instance, it has been discovered that the sa "accident-prone" workers have nea all the accidents. Their mishaps st from worry and insecurity over ma things, from mortgages to sex. By lieving these worries and emotional t sions, industrial psychiatrists have b able to reduce factory accident rates

Accident-proneness among childre difficult to detect, but in many ca pediatricians have discovered child whose accidents are caused by insecur If you think your child is getting m than his share of cuts, burns, and fall would be wise to discuss it with y doctor.

But first inspect your home, find what's wrong and fix it, and fores accidents based on negligence. You begin by listing the physical dangers the household practices mentioned this article. Check your rooms habits one by one—and eliminate dar points.



It may save your child's life!

THE END

HOW TO GET WHISTLED AT

Continued from page 21

she says, "female executives who go meddling in their employees' personal affairs. I tell my girls that so long as they report here at nine o'clock fresh and clean and in their right minds, I consider their life out of the office entirely their own."

She goes so far with her nonmeddling that she has never had a personal luncheon or theater date with a business associate, nor has she invited any of them to her apartment.

Actually, Ann Delafield leads a life that is average enough, if it is a little overbalanced on the side of work. She lives alone in a New York hotel with cooking privileges. She likes to sew, trims many of her own hats, and is currently writing some books on health and beauty. She is an avid skier, and was quite a horsewoman until a fall broke her back and put a stop to any more riding. A broken leg last winter couldn't keep her from working. Neither did the broken back, suffered earlier in her career. She had an aluminum cast molded from a plaster model. In this, suspended on the Beauty Board in her office at a 40-degree angle, she exercised and attended to business matters alternately for six hours a day while the crushed vertebrae mended. Probably this is why no self-discipline seems difficult to her by now.

Practically everything that has happened to Ann Delafield has helped to prepare her for her present career. Born in Plainfield, New Jersey, she was started on the road to understanding her present pupils' problems by being, she maintains, a homely child. "My mother told me I would have to be good because I certainly was not beautiful."

Ann Delafield was an earnest student, going in for chemistry, biology, dietetics and physical education. Graduating from Packer Institute and Cornell University she began teaching physical education in private and public schools.

Doubling as an Actress

Marriage to Ian McEwen, a struggling Scotch poet and playwright, broadened her field. She alternated between teaching and acting, running a stock company with her husband and performing in it at the same time.

She picked up her first make-up tricks from an old character actress. She also learned to put on a good show.

When Ann Delafield toured the country, schools and women's clubs along the way invited her to talk to them. The women didn't want to hear about the theater. They asked questions about beauty and clothes. "I realized," she says, "that these women were yearning for beauty—and that they needed to diet."

A brief Hollywood interval, during which she appeared in a film called Cytherea and signed a five-year contract with Goldwyn, was ended by her husband's fatal illness in Europe. "I didn't go back. I was too ill myself. I went to the south of France and lay in the sun eating oranges. I got my health back, but I was blackballed in Hollywood."

Two plays on Broadway and a second marriage that ended in divorce were the last distractions Miss Delafield allowed herself. She turned to working single-mindedly for health and beauty, going to Battle Creek to teach physical training and to study diet under John Harvey Kellogg, who, she thought, knew more about diet than anyone else in the world.

It was at Battle Creek that she first got the idea for her Beauty Angle. "We uptilted patients suffering from prolapsus of the abdominal organs, to help get their organs back in place. I noticed that women patients tilted this way also looked prettier. They developed better circulation and firmer tissue in the face."

Ann Delafield went back on tour. This time, she carried with her a folding, patented contraption which she called her Beauty Board. Unfolded, it resembled a tilted ironing board with one end resting on the floor, and provided a base on which to assume the Beauty Angle. She conducted classes in women's clubs, prescribing exercises and diets and taking orders for the Beauty Board.

Returning to New York, Ann Delafield went to work for Elizabeth Arden as director of exercise in her Fifth Avenue salon. This unlikely setup lasted through seven years of violent disagreement and frequent firings of Miss Delafield.

When one of Arden's firings finally stuck—they were due, according to interested onlookers, to the simple fact that no one organization could contain two such determined females—Delafield was invited by the Richard Hudnut concern to direct exercises in their establishment. She seized the chance to have a permanent salon in which to give a complete do-over, combining exercise with diet and a gilding of cosmetics.

"That's when I was told I would ruin the beauty business. But Mr. G. A. Pfeiffer, then president of the company, said if my system would make women healthier and happier as well as prettier, he would finance it out of his own salary. All I had to do was to prove the system was physically and medically sound, good publicity, and that it would pay."

It paid. Miss Delafield likes to point out that the salon did only a $6,000 business the year before she arrived. Last year it grossed over $600,000.

When the Success Course began going out by mail in 1940, it was worked out from a transcription of Miss Delafield's own words of inspiration at the salon. This explains its breathless punctuation. On a pink sheet marked, "Read This *Every Day*," she coaxes: "Do realize that to be a success . . . to be the person you've dreamed of being . . . lovely . . . poised . . . charming . . . you need to follow faithfully the plan outlined for you. . . . It may not be easy . . . what is good is seldom attained with ease!"

Miss Delafield not only has a staff physician to check all salon pupils, but urges every correspondence student to check first and frequently with her doctor.

Children as young as nine have been sent to her by doctors to have weight and posture corrected. She also corrects behavior. "Children are naughty to attract attention," she explains. "W… them up to be so attractive that … don't have to push."

Her success with women and chi… secure, Miss Delafield is now eyin… men with mounting missionary zeal. … would have fewer executives dro… dead," she maintains, "if they woul… a few exercises flat on their backs … day, instead of plunging into stre… week ends for which they are not p… cally fit."

Hundreds of men have succumb… Miss Delafield's diet to keep their … company. Miss Delafield even re… 200 male applicants for aid, as th… sult of a story published by the … Condé Nast.

RIFLE-ARM SAMMY

Continued from page 26

"Later we learned that Smuckler had an obstruction in his throat, and after two or three running plays he got out of breath and had to rest for a while. The fact is, there never was a rougher football player than Dave Smuckler, or a guy who loved the game more."

Slingin' Sammy almost didn't get to play football, because his father fancied him as a potential big-league baseball player. He probably could have made the grade, too. But Sammy liked football better, and his arguments, plus those of his brother Bobby and of Bill Henderson, coach of the Temple high school, finally prevailed. So Sammy began to play football. He started at left end, and later Henderson put him in as tailback. The lanky youngster began to shine at once. The following summer the Baughs moved to Sweetwater, Texas, and Sammy did the rest of his high-school playing there, coached by Ed Hennig. Later he was offered his choice of Texas colleges. He went to the University of Texas under an athletic scholarship which permitted him to play baseball only.

But Sammy still had football in his blood. He finally transferred to Texas Christian, where he could play whatever he wished. At TCU, Baugh was coached by Dutch Meyer, an advocate of the double-wing system, which has the advantage of getting four pass receivers downfield faster than any other. It was Meyer who developed Baugh's punting and made him a master of the quick kick and an all-round player. As a result of this training, Baugh is really a finished footballer, not merely a passer. He is probably the best punter in the National League, he is excellent in pass defense, and he can run with the ball, although his physical setup—he's 6 feet 2½ inches tall and weighs a scant 175 pounds—is not adapted to coping with the bruising tacklers of the professional game.

But you'll not see Sammy punt very often, or carry the ball these days. He is too valuable an offensive weapon to be exposed to risk of injury.

There Was No Mud on Mr. Baugh

One game last fall illustrates the way the Redskins are protecting their star passer. Jimmy Conzelman had brought his league-leading Chicago Cardinals to Washington to fatten on a Redskins team with a poor record. The field was muddy. When the game was over, Baugh had completed 25 of 33 passes, six of them for touchdowns. The Redskins had won 45 to 21. Baugh's uniform was spotless, but Conzelman was mud-spattered from the knees down from his pacing up and down the side line in anguish.

"I had hoped Baugh's age might be getting him, but age doesn't matter the way they play him now," Conzelman said later.

Baugh was scouted by the Redskins in 1936 because George Preston Marshall, who had just transferred his football team to Washington from Boston, needed a first-class passer. But the Pittsburgh team had a prior draw in the National League draft and the Steelers also wanted Baugh. Marshall knew that the Pittsburgh fans were clamoring for their heroes to draft an All-America player from Duquesne University, so he let it be known that if the Steelers took Baugh he would take the Duquesne boy. Pittsburgh passed up Baugh, and Marshall grabbed him.

In those days draft rights meant the same as they still mean in big-league baseball—a player tapped by a pro team played with that team or not at all. Today the two major professional leagues fight tooth and nail for players. That's why Charley Trippi of Georgia, Johnny Lujack of Notre Dame, and Charley Conerly of Mississippi wangled long-term, high-figure contracts from the Cardinals, the Bears and the Giants.

The Bears are said to be paying Lujack $70,000 on a three-year contract, while Trippi and Conerly are getting at least as much. In 1937 Baugh received a $500 bonus and a first-year salary of $4,000 for signing with the Redskins. Of course, he does much better now; he is said to be drawing around $20,000 for playing football from mid-July to the middle of December.

Practical Football Philosophy

Baugh has no resentment against the draft system as it existed when he entered the professional game.

"When I was a rookie," he says, "some players got paid too little. Now some of them get paid too much. The best system for the players is to have the game healthy financially; it is better to have a draft system that doesn't bankrupt a club buying players before the season even opens. In the long run, what's best for the front office is best for the players."

This may sound as if it came from a front-office man, but it may also be the talk of an astute businessman. And Baugh is that, as well as being a great football player. He has invested his money wisely, and he has done well.

Today he owns a completely stocked, prosperous ranch of 5,773 acres some 18 miles northeast of Rotan, in Stonewall County, Texas, where he lives with his wife and their three sons. When the football season ends, Baugh heads for Texas and his horses and cattle. Down in Texas he is considered a top cow hand.

As Baugh sees it, football is more than a game; it is a part of his business, and he intends to stay in business as long as possible and to win as many games as he can. At first, brought up on the single- and double-wing systems of play, Slingin' Sammy balked at working out of the T formation adopted some years ago by the Redskins. But now he's all for the T, because he's found that it tends to prolong the usefulness of the quarterback who operates it.

In the single- or double-wing, Baugh had to block on perhaps half the plays, and blocking is a procedure which, in the tough professional game, is very wearing on a skinny guy weighing only 175 pounds. But in the T, Baugh is rarely tackled and never has to block. And since neither he nor any other first-class forward passer plays on defense very often, it is possible for him to go through an entire game without ever being touched by an opposing player.

It is almost impossible to select Slingin' Sam's best game with the Redskins, since he approaches perfection every time. Almost every time, that is. There was one game in which Baugh and all his teammates were awful; nobody could do anything right. That was the dreadful slaughter of 1940, when the Redskins met the Bears in the playoff game, and the Chicago monsters walloped Baugh and his mates to the tune of 73 to 0. Some Washington fans figure—they still talk with shudders about the game—that the break came when Charlie Malone, ordinarily a reliable end, dropped a Baugh pass on the goal line. At that time the Redskins were on the little end of a 7 to 0 score. A fan asked Baugh:

"Sammy, don't you think that if Malone had held onto that pass the result would have been different?"

"I sure do," said Baugh. "The final score would have been 73 to 6."

figures onto his arithmetic paper and the Mister said, "Does De Lucie help you with your homework?"

"I couldn't," I says, "I'm not educated enough, but I like him to do it out here. Every tub must stand on its own bottom. John Bunyan. Motto of the Industrial Home for Orphan Girls."

"I like that," he says. "John Bunyan. Well, well."

The garbage man came in today to return a cup I accidentally threw out. He is an old cheerful tall guy. He et one of my cupcakes. "Ever play basketball?" I says to him. "Never did, but I've saw plenty. Rocky played. My son, that's a cop," Frank replies. "Let's see you jump and catch that chain," I says. So he jumped at it and the trap door slanged down and about a thousand tennis balls bounced on his head and a pair of old golf shoes I forgot about. We like to died laughing. I've fixed it up with a lot more things and hope to catch the Mister someday.

I burned my hand on the iron and tore off a fingernail on a hook in the bathroom. Why did you write that I don't seem to be much of a judge of character? I love everybody and my motto is now *"Moonlight and Roses and Dreams."* With love,

De Lucie (Lucy) Weed

September 15

Dear Miss Pupke:

I am still not homesick. Him and her are a queer pair. Or should I say him and her is a queer pair? They have lovely children though. He is a radio commentator. He gives fifteen minutes of news three times a day with the official Wally Iredale reactions and is a great one to make it funny, if possible, and to quote startling sayings. Yesterday when I tuned him in he was talking about India and all of a sudden I heard him say, "As a wise woman I know often says, quoting from John Bunyan, every tub must stand on its own bottom." I like to dropped dead. Wise, me!

I made a lemon chiffon pie and a green salad with six kinds of leaves in it, he likes that, and beef stew with dumplings, and when he come into the butler's pantry where the liquor is kept, at five o'clock, I thanked him.

Stu was sitting in the breakfast nook making stuff out of a chemistry set, and Cherry was standing on a chair rolling out leftovers of pie dough and cutting them out with a cookie cutter.

"Just don't let's have a mixture of that pie dough and chemicals for supper, is all I ask," said the Mister sipping his highball. "My, this is a nice kitchen, if I did pay for it myself," and he sat down beside the kids.

Stu passed him his report card and the Mister says, "Don't spoil my mood. Hey, hey, this isn't bad at all. One *Excellent.* Will you look what Stupid did, De Lucie?" He put his hand in his pocket and brought out a dollar. "This is for your Excellency. You will get one for every *E* you get. How come you brought up your arithmetic so much?"

"Aw, it was easy, Pa. I did it easy, just sitting here, long as I wasn't alone."

The Mister looked at him and drank a small gulp. Mrs. Iredale came banging in the front door then. "Ho-hoo!" she called. "Wally, you home?"

He went into the front hall and I heard her say angrily, "Highball in your hand, of course. You're getting worse and worse. Pour it into the plant. You make me sick."

"You athletes are always so self-righteous. You think you acquire merit by hitting at a ball."

"You do, in a way. It's our duty to be out in the sunshine enjoying the bounty of nature. I lost the ladies'-day tournament this afternoon, though. It was just from having subordinates I can't depend on. Joe Ella came so late that De Lucie had to tend to Baby, so she didn't bring me my tray in bed. I can't go downstairs for my coffee, Wally. It shoots my nerves to pieces for the whole day."

So you see, Miss Pupke, they need me, and I am beginning to make myself a warm permanent home here, like a dog turning around and around making a bed for himself in an old overcoat.

But there is one thing a little bit wrong. It is Skibby that I had the date with. He has pretty curly hair but he is not very nice. When he walked me home from the movies it was moonlight and I said, "Moonlight and roses and dreams. That's my motto," and he put his arm around me and told me slushy stuff and borrowed my week's pay, twenty-five dollars. He said he owed it to the store because he borrowed some money from them and has to pay it back before they notice it. But I am quite sorry I gave it to him because every time he comes past the house now he yells, "Hey, Moosie!" and heaves a small rock at the porch light and busts it and Mrs. Iredale does not like it.

When I get paid next week I will buy some bulbs so I can put them in as fast as he breaks them but I almost wish he would stop. With love,

De Lucie Weed

September 20

Dear Miss Pupke:

I was reading in the garbage an ad of those little silk pads to sew onto the shoulders of dresses and Jinkie says, "Woe to the women that sew pillows to all armholes and make kerchiefs to the head of every stature. Ezekiel."

I says, "What does that mean, Jinkie?" but she didn't know, just liked the sound of it because it is so solemn.

The Mister dusted into the kitchen on the dead run to snatch his coffee and coffeecake—he has given up the tablespoon lately—and he says, "Girls, is it going to rain?" and Jinkie says, "There shall be an overflowing shower; and ye, O great hailstones, shall fall; and a stormy wind shall rend it. Ezekiel," and the Mister says, "Ezekiel, Ezekiel, powerful stuff. Thanks, Jinkie. I can use that," and he rushed out.

I could hear Cherry crying and yelling so I knew Joe Ella was late again, and I went to the little kid's room and she was standing up in her crib bawling and wet to the ears and I made up my mind then to pick up the little thing every morning and train her and keep her with me or she'd never be trained like the babies in the Industrial Home get trained. I petted her and she stopped crying and the Missis' bell began to ring. So I trotted in there with Cherry riding on my back and Mrs. Iredale says, "I've been ringing for minutes, where's my breakfast?"

"I'm sorry," I says. "It looks as if Joe Ella isn't going to show up today. Shall I pop the baby in your bed while I run down and make your tray?"

"Heavens, no, take her with you," she says. "I can't handle a wiggly child like Cherry. If I had to lift her it might strain my back. I had an operation, you know."

So I galloped down the stairs with the baby. She helped me get the Missis' breakfast, by beating a bowl of water with the egg beater to keep her busy, and I had more fun and I'll never leave here. Afterward, while I dusted I gave her a little cloth and she dusted under things and we both had fun.

That day I said to Stupy, "What's your real name?"

"Stuart," he says starting to go down the basement stairs.

"Well, why don't you ever make your little lead soldiers in the kitchen instead of always being alone down in the basement? It's lonesome for me working here without more children around. I'm used to about sixty."

"Wouldn't I bother you?" he says in a faint voice.

"Gosh no."

He shot down the stairs to get his stuff, and we had a lot of fun with the soldiers and he let me pour some. He says, "I wish I could have a party. Mother has a party every week and I go to quite a few, but I never have any."

"We'll ask your mother if you can have a party right here. We'll have a taffy pull for a lot of kids. Wouldn't that be fun to do, next time she plans to spend the whole day at the club?"

So we are going to do that, and the Missis says, "I don't care, for Heaven's sake, but you are crazy to let a lot of stupid kids dirty up your nice clean kitchen. Stupy is just as happy alone in the basement. Why do you want to spoil him?" but she don't really care.

The gasman named Eric and the butcher's boy named Al and a Swedish carpenter working next door have asked me for dates but Skibby says he will kill them in some awful way if I go out with anyone else.

Yesterday I heard Cherry screaming and I looked out. Joe Ella was sitting by the play pen reading and not paying attention and saying, "Sh-sh," and I saw Skibby standing beside the fence with a little mirror in his hand, throwing the sunlight into the baby's eyes. She would keep running away and crying and he would move the mirror so the light would shine in the baby's eyes again.

So I ran out there and came up behind him and gave him a clump on the head that knocked him over into the ash heap. He got up real ugly and said, "I'll fix you you big moose," and tried to sock me. That was just silly, of course, and I knocked him down again quite gently so it wouldn't hurt him too much. He screamed, "It takes a gun in your hand to beat you, you big moose," and I said, "I ain't afraid of your water pistol, kiddo." I do not care for him much. I saw enough juvenile delinquents at the Industrial Home so they bore me, and now I am sure Skibby is not my ideal. With love,

De Lucie We

September

Dear Miss Pupke:

I was reading in the garbage that it is only training makes people right hand or left-handed. I am writing this with my left hand is why the letters are so big.

Yesterday when I took Mrs. Iredale tray up she says, "You are always fussing with the children when you ought to be keeping the place clean. Look at these ruffled curtains. Filthy."

"I'll take them down and wash them myself," I says, because what she says was certainly true. "Jinkie don't come Saturdays." So I started to take them down and didn't notice a needle was stuck in the edge and ran it into my hand.

"Oh, glory," I says, and sank right down on her shaze long and like I fainted dead away. The needle had disappeared right into my hand. You couldn't see a thing.

"What's the matter?" Mrs. Iredale asks.

"Nothing. Nothing," I says. I didn't want to let on to her that I was so stupid I got hurt again. It's gotten to be a joke. I pretended I was all right, but I was scared. Sometimes a pang would go through my hand that like to lifted me off the floor. I figured I could manage not to use that hand until I got a chance to sneak off to a doctor's and have him lift the needle out.

I don't know what I'da done with the kids. Stuart and Cherry did every thing I told them to. Mrs. Iredale was sailing off to the club in her car, and pretty soon the Mister got up and he went to the club in his car. I spread up the beds somehow with Stuart's help, and then Cherry climbed into her stroller and Stuart got out his bicycle and I figured if Joe Ella didn't come soon I'd take the children with me to see a doctor. We were on the front porch, and suddenly I remembered I hadn't locked the back door. The house looked awfully dark and empty with the garage doors open showing both cars gone. I heard a loud I didn't understand and I pushed Cherry's stroller through the house to

"An optimistic note was struck in the U.S. today when the Security Council voted unanimously for the formation of a committee to discuss the appointment of a board to investigate the question of whether or not such groups have the authority to propose the formation of committees without first bringing a motion before the . . ."

COLLIER'S C. T. WATERS

Famous recruiting poster of 1917

I need you again

Uncle Sam has always found young men ready to answer his call when the security of the nation was in peril.

This is not a time of war. Yet seldom before except in wartime has America been threatened with graver danger than today. The democratic peoples of the world look to us to help hold the balance of peace for the future.

We must not fail them.

A strong America is a peaceful America. But more than that a strong America is a force for peace around the entire globe.

You, who have enjoyed the liberty of a free country since your birth, are now face to face with the duty of protecting liberty. Your conscience—your honor—your patriotism will tell you whether you can shirk that obligation.

Joining the Army or the Air Force is an experience you'll never regret. You'll be the comrade of other young men of like ideals—volunteers in a great cause. You'll be a member of an alert, hard-hitting team, thoroughly trained, splendidly equipped. You'll have opportunities for education and travel in a well-paid career. And wherever you go you will be an ambassador of democracy—a guardian of peace.

Uncle Sam needs you now. Talk it over today at your nearest U. S. Army and U. S. Air Force Recruiting Station.

Listen to "Voice of the Army," "Sound Off," "Air Force Hour," "Proudly We Hail" and "On the Beam" on your radio.

U. S. Army and U. S. Air Force Recruiting Service

the kitchen, and here in the middle of the room was Skibby with a rock in his hand. He shied it at the kitchen light and busted it, and glass spattered all over the room. And he'd thrown everything out of the refrigerator, my fresh cake I'd made yesterday, and the eggs and milk. I could have cried.

"You horrid little boy!" I yelled. "You get busy with a broom this minute and clean up!"

He picked up a pistol from the table and pointed it at me.

"I don't mind your water pistol!" I said, and he said, "Should I shoot it at the baby? And we'll find out if it's a water pistol."

"No!" I said. "You'll hang, Skibby. You're old enough to hang."

"No I won't. I won't shoot her if you promise to pretend you were the one that made this mess. You have to promise, and the little boy has to promise too, or I'll do something horrible to the baby."

"But what's the idea?"

"Just to get even with you, you big moose."

Oh, that needle in my strong right hand! I did regret being so careless and so clumsy. If it hadn't been for that, I'd have pasted Skibby into the middle of next week, where he belonged.

"I promise," Stuart said in a scared whisper.

"Okay," said I, and I sat down, and Cherry crawled out of her stroller and into my lap. She never cried out nor said a word. Her eyes kept filling with tears. Stuart stuck close to my side, and I could hear the poor little fellow gasping.

Skibby started throwing cups on the floor, laughing like anything. A little way off, came the sound of the garbage-truck bell.

"Can I carry the garbage pail out? Old Frank will think it's funny if we don't. He'll come to the back door to get it."

"Do you think I'm a fool?" Skibby twirled the gun around on his finger like a bad man in the movies.

"All right. I warned you. If the pail isn't out, Frank will come to the house to find out why."

"The little boy can carry it out. Go on, kid. Run both ways, especially when you're coming back, or I'll fix you. Don't you say one word to the garbage man or anyone else. Or I'll shoot the baby."

Stuart passed right in front of me with the bucket, looking in my face with terrified eyes, and I calmly took a nice Haviland cup from Mrs. Iredale's tray that was close to my elbow and dropped it on the top of the pail.

Through the window I watched his little legs running down the path, and then running back.

It worked. Two minutes later, old Frank was knocking at the back door with the cup in his hand. Skibby was helping himself out of the Mister's rye bottle.

"Hell!" he said. "What's the old fool want? I know the kid didn't speak to him, I watched. He can't see in, can he?"

"He can see the top of you through the glass on the door. Why don't you put down that bottle, and pretend you're playing with the kids? Did you ever play basketball? See if you can catch that chain."

He had had enough rye so he was stupid. He's stupid anyway. He jumped at the chain, and the trap door flew open, and the tennis balls showered him, and an old horse blanket fell all over his head and arms. Skibby fumbled with the blanket, swearing, and dropped the gun, and I flew and grabbed it up, and kicked him on the pants, hard, and he sprawled over. Frank bust in and held him, and Cherry ran up laughing and hit him in the back with her baby fists. As the horse blanket was all tangled around him, maybe we weren't too brave. In the excitement I'd used my right hand now it wouldn't work any more. fingers got numb, and the gun fell floor. Stuart grabbed it. He tool and fired. He's only seven.

Skibby screeched horribly. "Y killed me!" he yelled.

It really wasn't a water pistol, be a bullet had gone into his knee, and was a good deal of blood on the with all the glass and food spilled

"Get a doctor!" Skibby was sc ing. "I'll bleed to death."

"That's a good idea, you little sti said old Frank.

"I shot you once, and I can again," boasted Stuart.

"No, that'll do," says old Frank was at the kitchen phone. "Don't no more, Stuart, I trust you. string around the boy's leg, De L

Dear Miss Pupke:

Where was I when I had to leav

The cops came while I was try get a cord around Skibby's knee. kitchen filled up with people, neig and policemen, and a doctor, an and Mrs. Iredale, each with a pu their hands. Frank the garbag had called them too. A very big eyed policeman came over to m said "May I do that for you? I'm l My pop is always telling me v grand girl you are. Shake!"

He shook my poor right ha passed out. Mrs. Iredale told m Cherry said her first sentence. Sh "Moosie has a needle in her har wish I'da heard her.

Mrs. Iredale took me to the eme room at the hospital, and I was pu cot next to Skibby. He stuck his out at me just before they gav ether to set his kneebone. If he a reformatory I feel quite sorry reformatarians.

They took an X ray of my har saw the needle, and gave me a loc tried to cut it out, and the needle away. They kept taking pictur probing, and the needle kept s away. Palms are tricky, old Dr. said. They don't want to cut ne tendons. And when he finally needle out, he was so happy he wi forehead and his glasses, and I t he was going to kiss me, but he Mrs. Iredale was happy too. She me, "You and Stu and old Fran aged that young scoundrel very w you should have had better sense become friends with him in tl place. Don't necessarily accept p own estimates of themselves, De Use your own intelligence."

They put me to bed and to sleep hospital. When I woke up, m ached like mad. The sun had ca so I knew the Missis would be golf, and I worried about Che Stu with maybe not even Joe Ella after them. It must have bee o'clock when my door opened, nurse brought in Mr. Iredale c Cherry, and leading Stu. M family. My own children. T have to be finished tomorrow. Wi

De Luci

Octobe

Dear Miss Pupke:

I once read in the garbage tha thing happens to everybody if t long enough.

The Mister brought some ca we were all eating a piece with and Stuart sitting on my bed, comes Jinkie.

"Well! This is a reproach, taunt, and an instruction, and a ishment," said Jinkie.

"Ezekiel?" asked the Mister. a phrasemaker. I must read Ez

"It's nice of you to visit me, Jinkie."

"I ain't a visitor," said Jinkie. "I'm atient."

"Did you run a needle into your hand ?" asked Stuart.

"No, no. The Lord is going to in-ase my family by another little boy girl."

"You never told us!"

"It happens all the time," said Jinkie. have seven. I went round to your se, Mr. Iredale, to tell Mrs. Iredale ouldn't be working for a week, but ody was home."

Sit down in my chair, Jinkie," says Mister politely.

"No thank you, I've gotta go," says ie with her sad mysterious smile. far as I can figure out, Mr. Iredale, Ella means to take a little trip with husband next week. Seems like the sis will be all out of help for a while. dby now."

like to had a fit. "I'm going home," id. "You folks need me. Go on out, Iredale, so I can get dressed. You my bill and I'll pay you later."

Oh, I'll take care of that."

e came back a little later with Dr. ker.

You have to have sulfa every two rs for twenty-four hours, De Lucie, t and day. You'd better stay here."

You can give me the sulfa pills, and rt will make the meals according to directions. Won't you, Stu? He is wfully smart boy. Cherry can roam nd my room. Too bad it is Satur- but Monday we can get the Missis temporary help and we'll make do then. Okay?"

I came home in the car, my right and arm bandaged to the shoulder, very painful too. The kids were ls. Stuart and his father went into hinese place and got eggs foo young upper, and we all et in the kitchen, Cherry was sprinting around the , glad for me to be home again.

e Missis came home, glad because ad played good golf, and wanted Mister to take her to the brawl at lub in the evening, so I told them . Luckily the kids slept, because a fever. They came in at one k and gave me the sulfa, and I into a dopey sleep, and the Mister must have kept setting his alarm clock because he came in at three and five and gave me my pill. He's a fine man.

At seven o'clock I was lying awake thinking how my hand hurt clear up to my jawbone. I knew Cherry would soon be making little sounds, trying to wake herself up, and I thought how well-trained I'd got her and how I hated to have her start in wetting her bed again. So I dragged myself up the stairs to the Missis' room, and let the Venetian blinds up with a slam and shook her gently, and twitched the cover.

"Wake up, Mrs. Iredale! This is your day to take holt."

She sat bolt upright, wide awake in a second. Honest, she's pretty in bed.

"Are you worse?"

"No. Better."

"Please go away and let me alone."

If you don't think Mrs. Iredale can look mean, you never woke her up. I was scared of her. But I thought what Jinkie sometimes says when she is hanging over the washtubs muttering to herself. "So will I go in unto the king," she says in a dretful low voice, "and if I perish—I perish."

I shouts very loud, "You have to get up now and run Cherry to the bathroom before she wakes up good. I can't lift her out of bed with one hand. It would be a shame for her to forget her good habits."

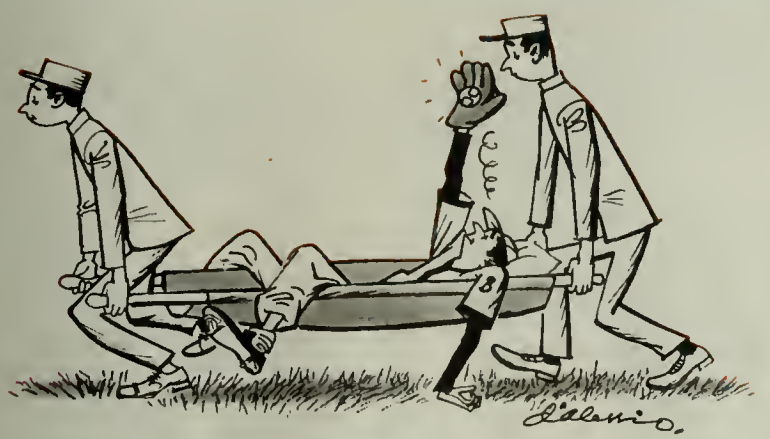
"You must be nuts," she says lying down and closing her eyes. "Go away."

I twitched the covers.

"Get up!" I roars. "After you take care of Cherry you have to make coffee quick for the Mister so he doesn't go back to that tablespoon breakfast. He has a program at ten and he'll have to hurry."

Mrs. Iredale looked at me. I didn't like her expression.

"You're the maid. Since when do you give orders? You're fired."



I yanked the covers off.

"Fired, okay. But still you are going to get up and tend to Cherry and the Mister and Stuart."

I grabbed her neck with my good hand and set her on her feet, hard.

"Every tub must stand on its own bottom. That means you too."

I thought she was going to take a

GREGORY D'ALESSIO

SPORTING ODDS

In a recent baseball game between professional teams from Bremerton, Washington, and Victoria, B.C., on the latter's grounds, a Victoria batter hit a high fly deep to left center with two out and a man on first. As two Bremerton outfielders reached for the catch they collided and dropped to the ground, both out cold. The batter touched all bases, preceded by the man on first, and the fans figured it a home run inside the park. But the base umpire, who had rushed out to the prostrate players, ruled the batter out. The center fielder, he announced, had caught the ball as he smashed into his teammate and still held it securely if unconsciously in his glove.

—A. G. Hill, Jr., Victoria, B.C., Canada

RAIN, WITH CONTINUED TOPCOAT SMARTNESS

New dress distinction and new utility have been brought to the Rain Topcoat by Rainfair.

These Rain Topcoats are of fine fabrics, style and tailoring, like costly topcoats. And they are showerproofed for double-duty. See and try on a luxurious new Rain Topcoat in military swagger style or conventional fly-front type.

Bold look and military styles are sweeping into tremendous popularity. Here is the outstanding garment of the season—THE COLONEL (Illustrated above)—Continental Dash and Military Swagger! Double-breasted for extra protection, full-belted, with button-down trench flap, epaulets, sleeve tab. Of finest quality showerproofed wool blend gabardine. Has deep yoke and sleeve lining of harmonizing lustrous rayon. Colors: Taupe and Tan—$34.50.

Rainfair presents the same military style in two other new Rain Topcoats. THE COMMANDO—rugged twill, $26.50. THE CAPTAIN—fine gabardine, $21.50. See these smart new Rain Topcoats at your nearest fine store.

poke at me. I'm seven inches taller than she is, but my hurt hand was throbbing so I like to died. Cherry let out a bawl, and the Mister came dashing out of his room across the hall and got the baby and sprinted with her to the bathroom. I didn't have to argue with him how nice good habits are in babies.

"Wally!" shouted the Missis.

He came in in his pajamas. No treat to me, I'd been seeing them every two hours all night long.

"De Lucie has gone out of her head, Wally."

The Mister put his big paw on my forehead.

"Burning up. It's time for your pill, De Lucie. Go back to your bed. Do you think the girl is delirious, Gertrude?"

"Perhaps she is," she replied thoughtfully.

Delirious, nuts.

"Can you slip some clothes on Cherry, darling?" she asks, sweet as pie. "It would be too bad to waste all the training De Lucie has given her. I want to make your breakfast. You have a ten-o'clock program."

"Imagine your remembering that!" he says, pleased. "Awfully nice of you to get up, Gertrude."

I staggered to my bed sweating as if I were carrying a trunk. It was just the blood running into my hurt hand. I lay in bed wondering if I would get anything to eat. I thought about that hundred dollars I intend to save up. It's to take a charm course so I can learn to walk and talk and act more like Mrs. Iredale. The Mister yelled goodby, and I heard the door slam, and the yackety noise of his car starting, and then Mrs. Iredale came in with a tray, coffee and toast and orange juice and two fried eggs, all very nice. She's smart enough when she decides to be. Plenty smart enough to be a first-class maid. I said thanks, and sat up and began to eat. Cherry crawled up on the bed beside me and swiped my toast.

"Let's have one thing straight, De Lucie. I'll overlook this morning because you are sick, and I was responsible for that needle being in the curtain. But if you are going to remain here you will have to concede that I am the mistress."

"You are," I said. "You're the boss. I hope I will be a patient for only one day more. By tomorrow I'll be through with the drug and able to do the work rather slowly with my one good hand."

"Then apologize for your colossal impertinence this morning. The idea! Hauling me out of bed!"

"I do apologize. I'm awfully sorry. I felt bad and ashamed right at the time. Tomorrow will you get up without my having to get tough? I don't intend to have the baby and Stuart and the Mister neglected."

She began to laugh. "You are so bullheaded and thickheaded, De Lucie, that it's funny. You treat me like a spoiled child, like a favorite naughty child."

Well, maybe I do feel that way, but I wasn't going to admit it.

"Just don't fire me. This is my home, and I hope to live here ten years, so I can learn to imitate you."

"If Jinkie wasn't having another baby," Mrs. Iredale threatened, "I'd fire you in one minute."

"Don't do me any favors," I said. "If you fire me, you lose as much as I do. I lose my home, and you lose a darn' good cook. I've had three offers of marriage in the last six weeks, Mrs. Iredale. I know plenty of places where I'd be welcome."

"The gas man?" she asks, grinning. "Cute, too."

She sat down in my little rocker, and I was pleased to see Cherry climb into her lap and rock with her.

"Yes, the gas man. He et some of my luncheon rolls and asked me to be his. And Al, the butcher's delivery boy. My coffeecake bowled him over. And the Swede carpenter that you called in to rehang the doors. He has never asked me to go anywhere but he is very insistent to marry me. He would like to enjoy good cooking and then he thinks I co go out and do daywork and bring about thirty dollars a week. He's p tical. But old Frank, the garbage m he has got a son Rocky that he hop will like. I might too. I just had glimpse of him."

"I didn't know we had such a bel the house. That's more chances of matrimony than I had, and I was posed to be an heiress, in a small wa

"But you weren't noted as a g cook, like me, Mrs. Iredale. I mean that I'll keep on getting three o every six weeks. I'll run out of l candidates pretty soon."

Mrs. Iredale got up and dum Cherry on the bed, frowning humming to herself.

"All right. You have made your p and you have a permanent place in family, De Lucie. It's a relief to my husband spurn the bottle in morning. You've helped clear the sense up—and you've helped Stu. I loves you. And as a matter of fa guess I love you too."

I can't believe I heard her right cause she was walking out of the r But I think that's what she said. nice. With love,

THE END

BREAD WITHIN THE WATERS

Continued from page 13

food and breathing air for the rest of life on earth. Scientists call this natural process photosynthesis. For 200 years they wondered how a simple blade of grass performed this daily miracle—taking carbon dioxide from the air; water and minerals from the earth; light from the sun, and turning them into food.

Now, in Year X, man can do what a blade of grass can do. On his farm he turns carbon, water, minerals and sunshine into nourishing food for millions.

How near are we to this farm?

As you read this, hardheaded industrial engineers are consulting with scientists. The problem: One group of scientists has produced test-tube quantities of fats and proteins from single-celled plants. Other scientists, using new atomic-energy tools, have partly glimpsed, for the first time, the way the food-producing factory inside the living plant works. They have even charted some of the steps in this hitherto mysterious process.

Now it's up to the engineers to take the newly created laboratory food and the newly learned lessons on natural food production out of the laboratory and put them into mass production.

Preview of Farm in Operation

On the basis of what scientists already know, here is how the engineers say the farm of the future might work:

The pumping stations on a lake shore or seashore suck in tons of water and pull it through batteries of heat exchangers where it is sterilized. Automatic equipment inoculates the sterilized fluid with microscopic plant life—algae—and adds nourishment for the plants—carbon dioxide, nitrogen, magnesium. In the thick glass coils, which guard the fluid against pollution from the air but let in the sun, the plants multiply and, like so many billions of microscopic factories, go to work to produce edible foods—butter, tissue-building proteins, starches, fodder for cattle.

Miles down the pipe lines, the "crop" is harvested by pumping. Automatically operated devices, requiring only switchboard control, swirl the harvest through batteries of centrifuges. The centrifuges separate the crop from the water in which it grew. On moves the crop to solvent extraction tanks for processing into food for man and beast.

Conceivably, if plants hardy enough to withstand polution from the air are developed, the whole food-making process may simply take place in great tanks of water. Why not? Or in man-made ponds poured out on unused desert land near the sea.

Man could then sow the seas and harvest his daily bread with power pumps.

Here, specifically, are the historic discoveries in American laboratories about which engineers weave their dreams of the farm of the future.

The Carnegie Institution's Division of Plant Biology at Palo Alto, California, has developed algae—single-celled water plants—that are 85 per cent fat. To realize the richness of this find, you must understand that the cottonseed and soybean, from which most vegetable oils come, are only 20 per cent fat. The scientists were tempted to see whether they could build a pilot plant to translate the test tube of yellow algae fat into a tank carful. They knew this would be exciting in a world starved for fats. Reluctantly, they decided to stick to their knitting, which is pure research.

But Dr. Herman A. Spoehr, developer of the fat algae, said, "If I were a far-sighted industrialist, say a food or soap manufacturer, I'd certainly build a pilot plant."

At the University of California at Berkeley, in the laboratory where America's first cyclotron was built, other scientists have set the scientific world by the ears by outlining the chemical cycle with which the food-making factory in the growing plant does the job. Using radioactive materials that open up worlds hitherto hidden even to the most sensitive microscopes, they have sp and isolated some of the compo which the plant makes in its proc creating sugars and proteins.

The University of California che have thus made the first long strid ward making abundant food to By understanding what Mother Nat up to, the chemist can either repea process or tamper with it until h made what he wants.

Prying into Nature's Chemist

not even history's most destructive wars. The earth has 200,000,000 more persons today than before World War II.

The world is looking into the terrifying face of the specter of permanent, mass hunger.

Can the scientists get there in time with new sources of food?

Over luncheon coffee in the Faculty Club at the University of California one day in January, 1939, a table at which sat a group of brilliant men buzzed with animated conversation. Via the scientific and academic grapevine had come the news that the Germans had split the atom in the laboratory and released vast energy. The excited group discussed what this might lead to.

Men who were on the threshold of world fame were there—big, handsome Ernest O. Lawrence, who was to win the Nobel prize in physics that year for constructing the cyclotron; frail, boyish J. Robert Oppenheimer, shy and quiet amid the hubbub, who was to direct the fashioning of the mechanism that set off the atomic bomb; the youthful instructors J. W. Kennedy and Glenn T. Seaborg, destined to be the joint discoverers of plutonium a year later.

A chunky twenty-eight-year-old chemistry instructor by the name of Melvin Calvin got in his cent's worth.

"I'll bet my penny atomic fission will be put to work in five years," he said.

Recently, a similar group of University of California scientists again placed penny bets at their Faculty Club luncheon table. This time the talk hummed about the swift strides researchers are making in their hot pursuit of the photosynthesis secret. What would be the first use for the new discoveries? Dr. Melvin Calvin, now a full chemistry professor and in charge of the university's photosynthesis researches, put up another penny.

"I'll bet my cent that the first use will be to make butter," he said.

An Eighteenth Century Experiment

The scientific search to solve photosynthesis, now so near the pay-off, began in 1772. Then Joseph Priestly started the hunt with a simple experiment. He stuck a lighted candle under an inverted glass, and watched it flicker out as the oxygen was consumed. Next, he put a sprig of mint into the exhausted air and then ten days later put another lighted candle under the glass. It burned perfectly! The sprig of mint had created new oxygen.

But *how* this happened remained a mystery for a century and a half, until scientists split the atom and gave themselves new tools. For, until the atomic era, all that scientists could do was to measure the external properties of plants —the oxygen they produced, the carbon dioxide they consumed. The atomic research tools were put to work five years before the bomb. It happened this way:

When Dr. Ernest O. Lawrence put the finishing touches to his Nobel prize-winning, atom-smashing cyclotron in 1938, chemists and physicists at the University of California swarmed to the fascinating, great new scientific toy.

One fascinated bee was a cherub-faced, long-legged, thirty-year-old chemist by the name of Sam Ruben. Joining in the atom-smashing, Ruben and a colleague soon discovered (in 1940) the now famed Carbon 14 and the lesser-known Carbon 11. In the jargon of the scientists, these are isotopes, man-made modifications of elements found in Nature—in this case, modifications of natural carbon. Isotopes are elements composed of atoms whose nuclei have been knocked awry by atomic bombardment. They have one great, overriding quality. They are radioactive, i.e., they eject charged particles at high speeds.

Ruben had a flash of genius. He noted that the radioactive carbon isotopes, although invisible to the most sensitive microscopes, were as apparent to him as, say, his fist. Not through his eyes, but through instruments that could count their radioactive pulsing and thus detect them anywhere at any time. The radioactive carbon atom was like an atom with a flag on it. It could be spotted. Why not use these bellwethers as tracers? Dump Carbon 11 or Carbon 14 into a chemical compound and follow it through every step of its chemical transformation in that compound. Here was a new tool that could broaden scientists' horizons even more than the discovery of the microscope did.

Eagerly, Ruben set his sights for the most distant horizon of them all—the inner world of the plant life processes. His plan of attack was beautifully simple. The plant takes in carbon dioxide and water and with the help of light does a chemical job of producing sugars, proteins and other high-energy materials. Very well. Why not feed the plant radioactive carbon dioxide (by making it breathe in an atmosphere of radioactive carbon dioxide)? Then after a few minutes, or hours, kill the plant with a shot of acid and see what the tiny chemical factory inside the plant had accomplished up to that point.

Hitherto impossible for lack of suitable instruments you could now, thanks to radioactive atoms, tell what happened to the carbon dioxide. Repeat the experiment often enough, and you could eventually spot each chemical step and identify each intermediate chemical compound the plant formed.

It was a noble experiment, conceived in the grand style of a Newton. But Ruben never finished it. The war intervened, and he sacrificed his life through overwork in pursuit of new lethal gases.

But the war brought the atomic-energy pile and the Atomic Energy Commission. From the pile at Oak Ridge, Tennessee, came radioactive isotopes in quantities prewar scientists had not dared dream of. From the Atomic Energy Commission came generous funds for peacetime research, money for Geiger counters, for isotopes, for well-stocked and well-staffed laboratories. The scientist had never had it so good.

At the University of California the doctors Melvin Calvin and Andrew Benson picked up where Sam Ruben had left off.

Calvin is a round-faced, balding young man of thirty-seven, whose tumbling flow of words has trouble keeping pace with his racing mind. A Detroit boy, trained at an engineering college, Calvin came to the University of California way of England, where as a Rockefe Foundation fellow, he delved into porphyrin molecule (the stuff of wh the green of the plant and the red of blood are made). He became a sor jack-of-all-sciences—physicist, biolo chemist—and so prepared himself for challenge of his life—photosynthesis.

Benson is a lanky, freckle-faced Ph of thirty-two, whose slangy informa belies a brilliant research backgro and intense work habits. He is the r who works out in the laboratory ideas that Calvin sparks.

Studying How Algae Make Food

First thing they did (in January, 1 was to breed 15 ten-gallon flasks' w of green algae. An alga measures a one five-thousandth (.0002) of an i This is about the size of a blood The 150-gallon batch yielded one po of solid green matter.

Scientists use algae for prying Nature's food-making secrets bec they are the simplest form of plant They do all of the complicated f making job within a single cell and be watched more easily than can com plants like wheat, say, or corn which specialized cells assigned to special t

Calvin and Benson backtracked Ruben's prewar work. Ruben and colleagues had shrewdly guessed tha plant can take carbon dioxide from air in the dark. Then, when light c along, the plant starts turning the ca dioxide into sugar and other chemi If this were true, it could be a great to researchers. By shutting the a away from light you could slow d their food production. They would r a small array of compounds, and could have a better chance of identif them.

Calvin and Benson shined ordi electric light on a batch of algae, tu them in a black flask, fed them a sh "hot" (radioactive) carbon dioxide found that in the dark they were c everything a plant can do in the light make sugar, protein and the rest.

For 18 months Calvin, Benson their six-man team of research assis fed radioactive carbon to the unsus ing algae. (The algae apparently know they're breathing radioactive bon dioxide and go about their making business anyway.)

Algae can produce some sugar i space of half a minute. So, quickl fore the microscopic guinea pigs gone far in their work, Calvin

ason would kill them with a shot of tic acid. With the help of a Geiger unter that clicked off the pulsing radi- on of the radioactive carbon atoms in- the plant, the researchers would start eries of brain-busting separations and lyses, using radical chemical methods. at were the algae up to at this point? that? And at that?

he men worked day and night.

arly this year the nightwork began ay off. Calvin and Benson crashed ough with the compounds they had a seeking. They rocked the scien- world with disclosures of hitherto nown steps taken by the plant in its d manufacturing. They spotted and ed a dozen intermediate compounds ccinic acid, fumaric and malic acid, ng others.

alvin sat down, and on the basis of mplete evidence, estimated the chem- cycle, the whole sequence of steps in plant's food making. Much of it, pported by laboratory proof, was an ginative, educated guess. Scientists ver the country set about to knock wn. But steadily, Calvin's own re- ch team has isolated compound after pound. Each has fitted into the cycle e said it would!

alvin has painted this picture of the -producing cycle.

sualize a ring of pipe shaped like a hnut, with smaller, tributary tubes ng from it. Into the main pipe from

om Installment XVII of THE ECRET PAPERS OF HARRY L. OPKINS: Hopkins assured Sta- n that all America wanted was strong, democratic Poland iendly to the U.S.S.R. Stalin sured Hopkins that all Russia anted was a strong, democratic land friendly to the U.S.S.R. t, as Roosevelt had once re- arked to Churchill, there was parently no way of translating riendly" from one language to e other so that it would end meaning the same thing.

ide go carbon dioxide and other nutrients. Through the tubes on ther side come the completed fat, n and sugar.

re is how the chemist can control production by plants. If he wants can stop up the protein and sugar by chemical means, so that the is forced to turn everything into fat. scientist wants protein, he can stop e sugar and fat tubes and so train ant to produce nothing but protein.

ty miles south of Calvin's labora- where scientists of the Carnegie tion produced algae which are al- wholly fat, no radioactive carbon sed in trying to find out what went side the plant's food-making fac- Here scientists simply experimented he conditions under which plants

Behind these experiments was a ating theory.

here did our present-day petroleum from?" Dr. Spoehr asked. "Scien- uspect now it was laid down by s upon billions of primitive algae stored a much higher ratio of fat eir present-day descendants. The ? Well, the theory is that the primi- mosphere was different from what day. It was low in oxygen, because ive plant life hadn't yet produced it abundance we have it today. If uld reproduce the growing con- , which gave rise to the petroleum- ting algae—we could make algae in today."

Spoehr did this in the laboratory, up with the fattest of all plant By using the same set of growing ons he can repeat at will.

The scientists know they're involved in a grim race to find new sources of food. Food crops are diminishing while baby crops are increasing. Alarmed population chartists predict that one brief century from now the world must cope with a doubled population.

Well, what are we waiting for? Let's open up new land, clear the jungles of the Amazon, and Borneo and Africa. Let's irrigate the deserts, develop new seeds for more intensive farming, new bug and weed killers to protect what we grow.

Here the botanists raise a sobering hand. Forget about the tropical jungles, they say. Tearing rains have leached out the soil over the centuries, robbed it of nutritious minerals and made it poor stuff for growing crops. Geographers throw more cold water. There is little new and fresh land to open up, they point out. Far from having more land to look forward to, man must face up to the fact that he's confronted with a permanent shortage. One human being needs at least 2½ acres to provide him with food and clothing. But if you divide the world's people by the world's arable land, you find there is only an average of one-and-three-quarters acre per person available. Decidedly, the human race is already behind the agricultural eight ball.

And that's not all.

Far from expanding his crop-producing lands and the fruits thereof, man is actually shrinking them. So greatly has he multiplied and so swiftly is he digging into the earth's capital of natural resources that geographers now regard him as a destructive geologic force.

"It is probable that since the dawn of history, man has destroyed as many productive acres as now exist in the world," says Milton S. Eisenhower, the president of Kansas State College and brother of the general, Ike.

Empty Stomachs Breed Revolutions

This means more than an empty belly for many an individual. For peace rests on a full human stomach. Tell nutrition specialists how many calories are being consumed in different places throughout the world and they will tell you where unrest and revolution will break out next. Drop nourishment below 75 per cent of normal (2,900 calories daily is regarded as normal) say Mellon Institute nutritionists, and within weeks or at most months, you can expect a "marked increase in mortality and grave danger of civil unrest."

Today the list of countries below the danger point is frightening. It includes almost all of Europe, Asia and India.

The atom was first cracked in 1939. The explosion of an atomic bomb at Los Alamos, New Mexico, followed six short years later. To do the job in such quick order, America expended great wealth, harnessed the organizing ability of our great industrial corporations and mobilized the genius of the world's leading scientists. The stakes were that high.

Are the stakes just as high today?

What do you think? Here they are:

Enough food for the millions of today and those to come. And food means peace.

Harnessing the sun's rays to give us power and heat directly when our petroleum is running out and the world is just starting to become mechanized.

Understanding the secret of life, a clue to understanding disease, deterioration, death itself.

The stakes are high, and the race is on.

We who have hand-cranked a car, then watched the nation become honeycombed with highways; who have seen penicillin grow from a laboratory curiosity to a sickbed necessity, can now watch a test tube of yellow fat grown from invisible plant life, and in it see hope for the world.

Why not go Boom—Boom?

LOUISIANA HOUSING

DEAR SIR: I have read Scandals in Veterans Housing by Albert Q. Maisel (July 3d and July 10th) with much interest. Mr. Maisel entirely ignored the activities of the United States Attorney's office and the Veterans Administration in the Western District of Louisiana.

As United States Attorney for the Western District of Louisiana, I filed criminal bills of information, charging them with violation of Section 715, Title 38, U.S.C., which procedure eliminated the delay and expense of federal grand jury proceedings and resulted in immediate prosecution.

Among other things that the investigations and prosecutions accomplished were: 1. Restitution of a large portion of overcharges veterans had been forced to pay; 2. Elimination of Veterans Administration fee-basis appraisers who employed unscrupulous tactics; 3. Elimination of unscrupulous lenders from the G.I. lending program; 4. Restitution of major construction deficiencies. 5. Assurance that the U.S. Attorney and the Veterans Administration are determined to see that they are afforded a full measure of square-dealing in the purchase of their homes.

MALCOLM E. LAFARGUE, Shreveport, La.

RACIAL

GENTLEMEN: Forest Newman (The Week's Mail, July 17th) need not have any worries about Mrs. Dawson's squawk over what she terms Southern racial problems. This because southern California, in general, and Los Angeles, in particular, also has its Negro problems, and don't let anyone kid you she hasn't. When police officers who live in certain districts warn their wives to keep their doors and windows locked after sundown, and under no circumstances sit outside on their porches, nor take a walk around the block because of this condition, then you may be assured that Los Angeles has its Negro problem.

HARRY J. KELLY, Tucson, Ariz.

OLYMPIADDICT

DEAR SIRS: Collie Small (The Hot-Potato Olympics, July 3d) raps the Olympic Games Committee across the knuckles for saying that this was the fourteenth Olympiad and suggests that they should count their fingers and toes again and make it the *eleventh* as there were no games 1916, 1940 or 1944.

Nobody said it was the fourteen Olympic Games. The official progra says it's the fourteenth Olympiad. If turns up his dictionary he will disco that an Olympiad is "a space of four yea a system of chronology which dates fr 776 B.C." Don't tell Collie but I sho never have known myself if I hadn't r it in our Daily Express.

BARRY APPLEBY, Surrey, Engla

Mr. Small and the Olympic Committee quite a tussle over this point with the fi decision being proclaimed a draw. Olympiad is the four-year period betw Olympic Games, it is true, but what h pens when there are no Olympic Gam Mr. Small says he will take the matter again in 1952 with a slide rule, a dicti ary, and a new Olympic Committee.

WATER, WATER EVERYWHERE

SIRS: I just got around to your wonde article Are We Short of Water? (M 15th). The solution is this: Construct the desert places a few mountains ab 5,000 feet high and this will draw s and the snow will accumulate and get water. This can be done as cheaply a dam and it needs no repairs. With l bulldozers and cable dumpers these mo tains can be constructed in a short time

ELBERT EASTMAN, Portland,

Why not make it simpler—engage a m hill enlarger?

NORRTH CARROLINER, YO'ALL

DEAR SIRS: The July 31st cover was attractive, but—when Shane in The We Work says its lovely subject, Janet A "answered in good old Nawth Cahlina all'd be delighted" my feelings as wel those of any true native of our fair s may be best summed up as follows:

Come all of you from other parts,
Both city folks and rural,
And listen while we tell you this:
The word "you-all" is plural.

A week ago, while on a train,
And seated in the diner,
A man spoke up and said to me:
"Do YOU live in Ca-LIE-na?"

And when I told him he was wrong,
That Carolina was the place
A look of blank amazement
Appeared upon his face.

"That's what I asked you, sir," he
In tones of cold disdain.
'Twas plain to see he thought there
An idiot on the train.

BRYANT WILLIAMS, Asheboro, N C

MISS 1949

GENTLEMEN: In submitting the enc pic, I yield to family pressure. The m is Patty Valentine, who graced your New Year's cover (Jan. 3d). P

mother is my sister, and Patty is so da photogenic, that even I could not shooting her—in the present instan our dining-room table.

HARRY E. CUTHBERTSON, Oakland

THE SECRET PAPERS OF HARRY L. HOPKINS

Continued from page 29

ıtries which had signed the United ıons Declaration by the day on which conference should end would be in- l to the San Francisco Conference. said that at the latter conference the gates of the United Kingdom and United States would support the pro- l to admit to original membership wo Soviet Socialist Republics.

ıter in this meeting, both Stalin and ɔtov indicated that the signatures of Ukraine and Byelorussia to the ed Nations Declaration might be ined immediately, thereby qualify- hem for invitation to San Francisco. in Roosevelt made a bid to change ubject, whereupon Stalin said that he 't want to embarrass the President; : would explain his difficulties they ld see what could be done.

More Assembly Votes for Soviets

ɔosevelt said that previously it had a question of adding new countries e list of members. Now, the ques- was whether to give one of the : powers three votes in the assem- nstead of one. This, he felt, should ft for the San Francisco conference ecide. He added that America and t Britain had agreed to support the et request.

alin again asked if it would not solve lifficulty if the Ukraine and White ia signed the United Nations Decla- n now. When Roosevelt said he ght not, Stalin withdrew his pro- l.

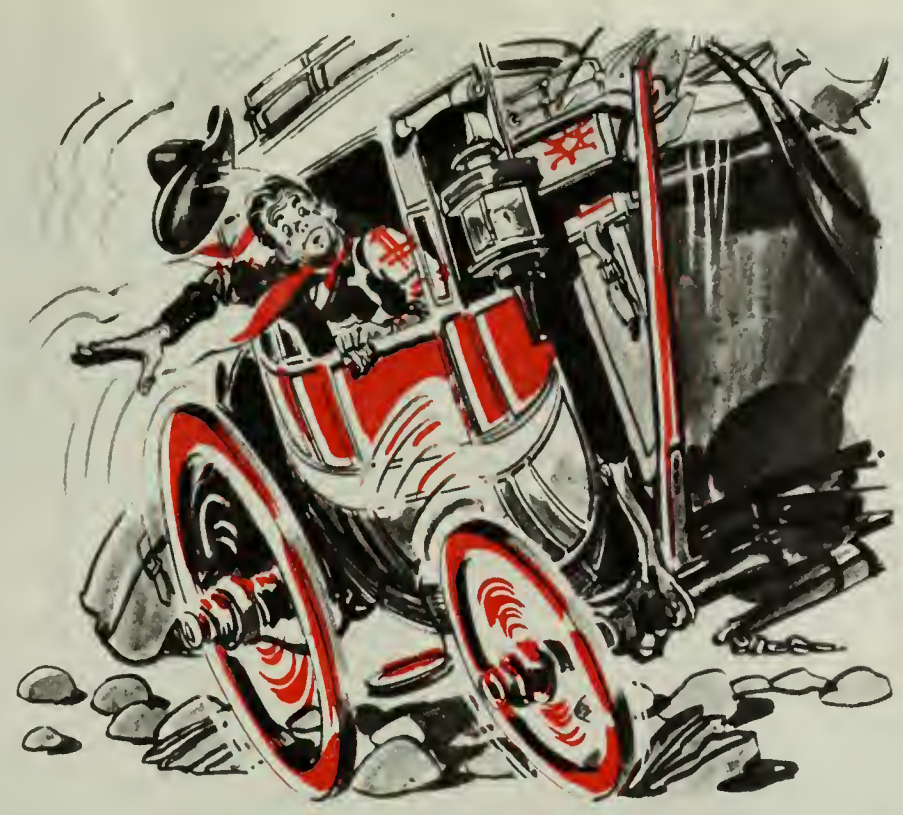
e final yielding on this point at was by Stalin, who also agreed diately when Roosevelt asked for ian support for a possible request he United States be given two addi- l votes.

lin was at first obdurate on the ct of French participation in the ol of Germany, and throughout of the conference Roosevelt was in- l to agree with him. But, as Hop- expressed it, "Winston and Anthony ı) fight like tigers for France." And ins worked constantly from his sickbed to support them. He was convinced that stability in Europe was inconceivable without a strong and influential France.

Before the seventh formal meeting on February 10th (this was after Byrnes' departure from Yalta), Hopkins finally persuaded Roosevelt to side with Churchill on this controversial point. When Eden again (for the seventh time) brought up the subject of France, Roosevelt announced that he had changed his mind with regard to the question of the French participation in the Control Commission. He now agreed with the Prime Minister that it would be easier to deal with the French if they were on the commission than if they were not.

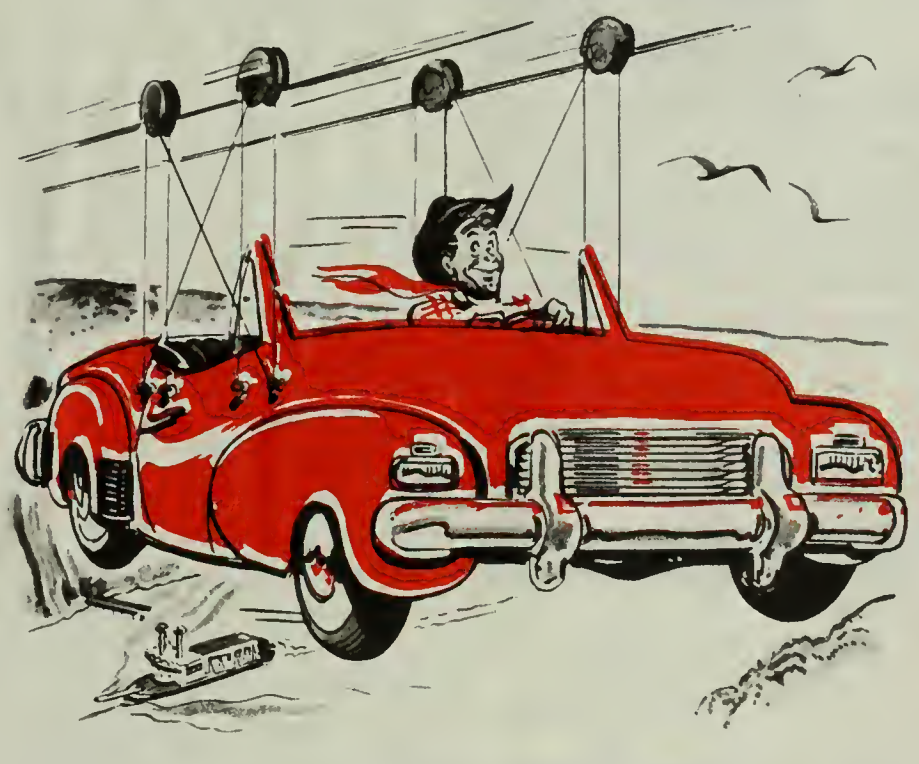
Stalin without further argument said that he had no objections and would agree to this.

Reading the record, it would seem that Stalin's concurrence with Roosevelt's reversal of position had come with dramatic suddenness. Actually, Roosevelt had previously informed Stalin privately through Harriman of his long-delayed change of mind and heart on this and Stalin had said that since this was the President's considered decision, he would go along with it.



The question of the Russian claim for reparations in kind from Germany was argued back and forth throughout the Yalta Conference. Both Churchill and Roosevelt said that public opinion in their countries was opposed to the whole concept of reparations in view of the unfortunate results of the Treaty of Versailles—and Stalin was later to confess to Hopkins that he became pretty fed up with hearing about American and British public opinion, believing that the President and Prime Minister kept on referring to it merely as a device to justify their own personal opinions and prejudices. The Russians never did succeed in understanding that public opinion could be a determining factor even with the powerful heads of state.

In the final meeting at Yalta, the whole question of reparations seemed to have reached a deadlock. It was decided



"No, he hasn't, Mama. . . . No, not yet, Mama. . . . Well, I don't know. . . . I'll let you know, Mama. . . ."

that the matter should be referred to an Inter-Allied Commission to be set up in Moscow, but it seemed impossible to agree on the terms of the basic directive on which this commission would proceed. During the argument, Hopkins wrote the following note and passed it to Roosevelt: "The Russians have given in so much at this conference that I don't think we should let them down. Let the British disagree if they want to—and continue their disagreement at Moscow. Simply say it is all referred to the Reparations Commission with the minutes to show the British disagree about any mention of the 10 billion."

Roosevelt took that advice, believing he had left the door open for all sorts of deliberations in the future.

Russians Claim F.D.R.'s Support

After Roosevelt's death, the Russians were arguing that he had supported their claim. They cited as their authority his statement, as Byrnes has written, that the Reparations Commission should "take in its initial studies as a basis for discussion, the suggestion of the Soviet government, that the total sum of reparations should be 20 billions and that 50 per cent should go to the Soviet Union." That was the basis of the 10-billion-dollar claim, but a reading of the quoted statement plus a knowledge of Roosevelt's oft-proclaimed point of view would certainly suggest that he was carefully making no commitment whatsoever.

The outcome on other principal subjects considered at Yalta can be summarized as follows:

Liberated Areas—The communiqué issued on this was a heartening reaffirmation of the principles of the Atlantic Charter.

Poland—The discussions of Poland's precise boundaries and the composition of its provisional government seemed to have taken up more time than was devoted to any other subject in the conference. Certainly the British and Americans left Yalta with the belief that this difficult problem had reached an honorable and equitable solution. They soon learned that they were wrong. There was similar optimism by the British and Americans that the basis had been established for a truly representative government in Yugoslavia.

The Dardanelles—While Stalin stated his country's desire for a modification of the Montreaux Convention, he did not press for an immediate agreement on this. Churchill said that the British certainly felt that the present position of Russia with her "great interests in the Black Sea should not be dependent on the narrow exit." He said that since this might affect the position of Great Britain in the Mediterranean more than it would that of the United States, he suggested that it should be discussed at a later meeting of the Foreign Secretaries in London. Stalin agreed.

Iran—On this one subject the Western Allies ran into a blank wall of disagreement.

At 3:30 on the afternoon of February 8th, Roosevelt, Harriman and Bohlen met privately with Stalin, Molotov and Pavlov to discuss questions relative to the Far East.

Roosevelt first discussed plans for the additional bombing of Japan. His hope was that it would not be necessary actually to invade the Japanese islands, but by intensive bombing to destroy Japan and its army, and save American lives.

Stalin said he had no objection to the United States having bases at Komsomolsk or at Nikolaevsk. In regard to bases on Kamchatka, the presence of a Japanese consul there made it difficult at present to make the necessary arrangements.

After discussing other military questions involved in the Far East, Marshal Stalin said that he would like to discuss the political conditions under which the U.S.S.R. would enter the war against Japan.

Roosevelt said he had been informed of Russian views on this by Harriman, and he told Stalin that he felt that there would be no difficulty in regard to the southern half of Sakhalin and the Kurile Islands going to Russia at the end of the war. He reminded Stalin that they had discussed at Teheran the matter of a warm-water port in the Far East for the Soviet Union. Roosevelt said that he had suggested then that the Soviet Union be given the use of a warm-water port at the end of the south Manchurian railroad, possibly at Dairen on the Kwantung peninsula. As Roosevelt had not yet had an opportunity to discuss this matter with Marshal Chiang Kai-shek, he said he could not speak for the Chinese.

President Roosevelt went on to say that there were two methods for the Russians to obtain the use of this port: (1) outright leasing from the Chinese; (2) making Dairen a free port under some form of international commission. Roosevelt preferred the latter, because of the relation to the question of Hong Kong. The President added that he hoped the British would give back the sovereignty of Hong Kong to China, so that it could become an internationalized free port. He said he realized that Mr. Churchill would have strong objections to this suggestion.

Stalin then brought up the question of the use by the Russians of the Manchurian railways. He pointed out that the czars had use of the line running from Manchouli to Harbin and from there to Dairen and Port Arthur, as well as the line from Harbin running east to Nikolsk-Ussuriiskii connecting there with the Khabarovsk to Vladivostok line.

A Choice of Two Solutions

The President said that here also, though he had not talked with Marshal Chiang Kai-shek on the subject, there were two methods of bringing this about: (1) to lease under direct Soviet operation; (2) under a commission composed of one Chinese and one Russian.

Stalin remarked that if these conditions were not met, it would be difficult for him and Molotov to explain to the Soviet people why Russia was entering the war against Japan. The war against Germany had clearly threatened the very existence of the Soviet Union, but they would not understand why Russia would enter a war against a country with which they had no great trouble. If these political conditions were met, however, the people would understand the nati... interest involved and it would be ... much easier to explain the decisio... the Supreme Soviet.

Roosevelt said he felt that one of ... difficulties in speaking to the Chinese ... that anything said to them was know... to the whole world in 24 hours.

Stalin agreed and said he did not t... it was necessary to speak to the Chi... of these arrangements at this time. It would be obviously disastrous if w... leaked out prematurely of Russian ... tentions to enter the war against Ja... and that is why it was decided no t... notify the Chinese of the arrangem... made at Yalta until the Russians c... complete the movement of twenty ... divisions to the Siberian-Manchu... frontier. Stalin said that the tenta... agreements concerning the Far ... should be put in writing, and this ... accordingly done.

Prelude to Invasion of Japan

Certainly, Roosevelt had reached h... determination to make a large pa... these agreements long before Yalta. H... considered that the Russian claims ... warm-water port and to Sakhalin an... Kurile Islands to be fair and reason... At Yalta, however, his principal con... was based on the American war p... against Japan. The costly opera... against Iwo Jima and Okinawa ... about to be launched, and the plans ... made for the major invasion of the J... nese home islands in the fall of 1945 ... entry of Russia into the Far Eastern ... by midsummer could mean the sa... of countless American lives; it m... make the final invasion unnecessary ... course, at the time of the Yalta ... ference, the perfection of the at... bomb still seemed to be only a re... possibility for the uncertain futu... was not until three months after R... velt's death that assurance came tha... long years of research and experime... this decisive weapon had achieved ... cess.

Roosevelt and Stalin discussed t... question of trusteeships. The Pres... expressed the belief that Korea shou... under a trusteeship, composed ... COLLIER'S

DAVE GE...

"The bank thoroughly explained to me all about a joint account— and it's nothing like you said!"

LLIER'S JEFFERSON MACHAMER

alin said the shorter the period the r. He inquired whether any foreign os would be stationed in Korea, and Roosevelt replied in the negative, n expressed approval.

e President admitted that there was question in regard to Korea which ed delicate. He, personally, did eel it was necessary to invite the ih to participate in the trusteeship orea, and he felt that they might t this.

irshal Stalin replied that the British d most certainly be offended. In he said, the Prime Minister might us." It was his opinion that the h should be invited.

e President then said he also had thinking about a trusteeship for China. The British, he said, did pprove of this idea. They wished ve it back to the French—they d the implications of a trusteeship night affect Burma. But, he added, e had done nothing to improve the s since she had had the colony. He hat General de Gaulle had asked ips to transport French troops to China.

e Gaulle's Conditional Promise

lin asked where De Gaulle was to get the troops. To which Roose- plied that De Gaulle said he was to find the troops when the Presi- could find the ships. Up to the it, the President added, he had been e to find the ships.

osevelt then spoke of China, saying or some time we had been trying to China alive.

in felt that China would remain He added that they needed some eaders around Chiang Kai-shek. President said General Wede- and the new ambassador, General y, had made more progress in ng the Communists in the north er with the Chungking govern- He said the fault lay more with hungking government than with -called Communists.

he sixth formal meeting on Feb- 9th, Stettinius reported on the re- f the discussion of the meeting of n Ministers on the matter of ing machinery in the world organ- for dealing with territorial trus- s and dependent areas. The stated that it was agreed that the vernments which will have perma- ats on the Security Council should t one another prior to the United s Conference providing machin- he World Charter for dealing with territorial trusteeship and dependent areas.

When this was read, Churchill vigorously interrupted, saying that he did not agree with one single word of this report on trusteeships! He had not been consulted nor even informed of this subject up to now. And under no circumstances would he ever consent to 40 or 50 nations thrusting interfering fingers into the life's existence of the British Empire. As long as he was Minister, he would never yield one scrap of their heritage! He continued in this vein for some minutes.

Mr. Stettinius explained that this reference to the creation of machinery was not intended to refer to the British Empire. It had in mind particularly dependent areas which would be taken out of enemy control, such as the Japanese islands in the Pacific. He said that it was felt that provision had to be made for machinery to handle this question, and he repeated that this was not intended to refer to the British Empire.

Churchill accepted the explanation but suggested that it would be better to specify that it did not refer to the British Empire.

The final agreements relative to the Far East were made between Roosevelt and Harriman and Stalin and Molotov on the afternoon of February 10th. Churchill did not participate in these, nor did Byrnes, who by this time had left Yalta.

Harriman met first with Molotov, and took up three amendments which Roosevelt wished incorporated in the agreement. He wished the wording to indicate clearly Stalin's readiness to accept the President's proposal that Port Arthur and Dairen should be free ports; and Section 2C should include the alternative of the railways being operated by a Chinese-Soviet commission. Harriman also mentioned again the fact that the President would not wish to dispose finally of these two matters in which China was interested, without the generalissimo's concurrence.

After the formal conference meeting in the afternoon between the President, the Prime Minister, Marshal Stalin and their associates, Stalin met with Harriman to explain further changes he had in mind for the agreement. He said that he was entirely willing to have Dairen a free port under international control, but that Port Arthur was different. It was to be a Russian naval base and therefore Russia required a lease.

(NOTE: Russia had leased Port Arthur in 1898 from the Chinese and had lost it in the Russo-Japanese War.)

Harriman suggested that Stalin discuss the matter at once with the President, which he did. Roosevelt agreed to Stalin's revised proposal regarding the ports.

Stalin told Roosevelt that he agreed it would be more appropriate for the Manchurian railroads to be operated by a Chinese-Soviet commission. He further agreed in the need for concurrence of the generalissimo on the matters, and he felt that the generalissimo should also give his concurrence to the *status quo* in Outer Mongolia.

Roosevelt asked whether Stalin wished to take these matters up with T. V. Soong when he came to Moscow, or whether Stalin would prefer that Roosevelt take them up with the generalissimo.

Stalin Insists on Secrecy

Stalin replied that as he was an interested party, he would prefer to have the President do it. Having in mind the question of secrecy, Stalin said he would let the President know when he was prepared to have the subject opened with Chiang Kai-shek.

Roosevelt said that he would send an Army officer from Washington through Moscow to Chungking with instructions to Ambassador Hurley, in order to insure secrecy.

(NOTE: This explains why these tentative agreements relative to the Far East were not made public until after Roosevelt's death.)

The following day, before Roosevelt's departure from Yalta at 4:00 P.M., the amended agreement on the Far Eastern conditions was signed by Stalin, Roosevelt and Churchill.

A large dinner was given by Stalin on the evening of February 8th and a smaller one (with only the principals attending) by Churchill on the last evening, February 10th. At the former dinner, in a toast to the alliance between the three great powers, Marshal Stalin remarked that it was not so difficult to keep unity in time of war since there was a joint aim to defeat the common enemy. He said the difficult task came after the war, when diverse interests tended to divide the Allies. He said he was confident that the present alliance would meet this test also and that it was our duty to see that it would, and that our relations in peacetime should be as strong as they had been in war.

At the Churchill dinner, Stalin expressed dissatisfaction that no positive decision had been reached on the question of German reparations and it was agreed that the communiqué should contain these words: "We have considered the question of the damage caused by Germany to the Allied nations in this war and recognize it as just that Germany be obliged to make compensation for this damage in kind to the greatest extent possible. A commission for the compensation of damage will be established." That, of course, left the exact computation of the damage and of Germany's capacity to pay as subjects for future consideration.

The mood of the American delegates, including Roosevelt and Hopkins, could be described as one of supreme exultation as they left Yalta. They felt that this had been the most successful conference of all, and the immediate response of the principal spokesmen for British and American public opinion added immeasurably to their sense of satisfaction with the job that had been done. As soon as Roosevelt came on board the cruiser Quincy at Suez he received floods of messages telling of the enthusiastic response to the publication of the Yalta communiqués in the United States. One of the cables quoted Herbert Hoover as saying, "It will offer a great hope to the world."

Hopkins later said to me, "We really believed in our hearts that this was the dawn of the new day we had all been

praying for and talking about for so many years. The Russians had proved that they could be reasonable and far-seeing and there wasn't any doubt in the minds of the President or any of us that we could live with them and get along with them peacefully. I think we all had in our minds the reservation that we could not foretell what the results would be if anything should happen to Stalin. We felt sure that we could count on him to be reasonable and sensible and understanding—but we never could be sure who or what might be in back of him there in the Kremlin."

Last Rendezvous at Alexandria

The Quincy proceeded through the Suez Canal to Alexandria, where Churchill came aboard for lunch, this being the last meeting of the "two naval persons."

During the three days between Alexandria and Algiers, Hopkins felt desperately ill and was confined to his cabin, which was inaccessible to Roosevelt.

Roosevelt, who was feeling sick and tired himself, had arranged to appear before the Congress immediately after his return to Washington and deliver a speech on the Yalta Conference. (Churchill was to make his report to the House of Commons on February 27th.) Roosevelt's speech must be prepared during the trip across the Atlantic and naturally he expected Hopkins to help. But Hopkins sent word through Bohlen that he must leave the ship at Algiers and fly back to Washington. Roosevelt made no particular attempt to persuade Hopkins to change his mind, but he was disappointed and even displeased.

When Hopkins left the Quincy at Algiers, the President's "goodby" to him was not a very amiable one—a circumstance which it is sad to record, for Hopkins never saw his great friend again.

Hopkins arrived back in Washington on February 24th, and three days later flew to the Mayo Clinic where he remained until April 13th. Roosevelt returned to Washington on February 28th and made his speech to the Congress on March 2d. He made no claims to the achievement of perfection at Yalta. He said, "It has been a long journey. I hope you will all agree that it was a fruitful one. Speaking in all frankness, the question of whether it is entirely fruitful or not lies to a great extent in your hands. For unless you here in the halls of the American Congress—with the support of the American people—concur in the decisions reached at Yalta, and give them your active support, the meeting will not have produced lasting results."

After this speech, disillusionment began to set in. Speaking of the voting procedure in the Security Council, Roosevelt said, "It is not yet possible to announce the terms of it publicly, but it will be in a very short time." On March 5th announcement of the voting formula was made by Stettinius from Mexico, where he had gone for the Chapultepec Conference. Press opinion on this was very much divided. Most of those who criticized the veto provision interpreted it as a "sellout" to Stalin.

Then it was announced that Molotov would not go to San Francisco, the Russian delegation there to be headed by Gromyko. Since Eden was to head the British delegation, and Stettinius the American, Molotov's abstention was generally interpreted as a blunt confession that the Soviet government did not attach much importance to the conference.

There was now a growing feeling of uneasiness regarding the true relationship between the Soviet Union and the United States, Great Britain and other United Nations. It was beginning to be feared that a monstrous fraud had been perpetrated at Yalta, with Roosevelt and Churchill as the unwitting dupes. Then, suddenly, there came a news break which made the whole situation look very much uglier.

Roosevelt had announced that the American delegation at San Francisco would be completely bipartisan: Congress would be represented by Senators Tom Connally and Arthur Vandenberg and by Representatives Sol Bloom and Charles A. Eaton.

On March 23d the President summoned members of this delegation to the White House and informed them in strictest confidence of the arrangement made at Yalta whereby the United States and Britain would support the Russian request for three votes, in return for which Russia would support the United States request for three votes if it were put forward. This important piece of information was conveyed either accidentally or through a deliberate "leak" to the New York Herald Tribune and was printed on March 29th. The White House was compelled to issue a statement admitting that it was true. Then the press quite naturally wanted to know why it had been kept a secret—and how many more secrets were left over from Yalta.

From then on, the very word "Yalta" came to be associated in the public's mind with secret agreements. When the Far Eastern discussions were finally disclosed they were viewed with intense suspicion as further evidence of devious dealings, although there had been good and sufficient reason to withhold these until Russia was ready to go into action against Japan.

After Conferring with MacArthur

It was during this last week in March that I saw Roosevelt for the last time. I had just returned from a long trip around the Pacific, during which I had gone to Manila at the President's request to talk to General MacArthur in an attempt to learn something about his ideas for the future military government of Japan.

It was extremely difficult for any emissary from Washington to get through to MacArthur in those days. I, however, being an obscure and relatively inoffensive civilian, encountered no difficulties and was most hospitably received. General MacArthur talked to me for nearly three hours, and I came away enormously impressed with the extent of his understanding of the Orient and the breadth of his views.

On March 24th I went to see the President in his office and then walked over with him to the White House proper where we had lunch with Anna Boettiger on the sun porch. I said that I believed strongly that MacArthur was the ideal choice for military governor of Japan after the surrender; and victory in the Pacific appeared a great deal nearer than I had imagined before I made this trip. I told the President what I had heard MacArthur say on this subject, and Roosevelt observed, rather wistfully, "I wish that he would sometimes tell some of these things to *me*."

Three weeks later when I heard the news that the President was dead, all I could think of was, "It finally crushed him. He couldn't stand up under it any longer." The "it" was the awful responsibility that had been piling up and piling up for so many years. The fears and the hopes of hundreds of millions of human beings throughout the world had been bearing down on the mind of one man, until the pressure was more than mortal tissue could withstand, and then he said, "I have a terrific headache," and lost consciousness, and died. "A massive cerebral hemorrhage," said the doctors—and "massive" was the right word.

The morning after Roosevelt's death Hopkins telephoned me. He said, "You and I have got something great that we can take with us all the rest of our lives. Because we know it's *true* what so many people believed about him and what made them love him. The President never let them down. That's what you and I can remember.

"Oh, we all know he could be exasperating, and he could seem to be temporizing and delaying, and he'd get us all worked up when we thought he was making too many concessions to expediency. But all of that was in the little things, and he knew exactly how little and how unimportant they really were. But in the big things—all of the things that were of real, permanent importance—he never let the people down."

The next afternoon, Saturday, we went to the funeral service in the East Room of the White House. I was sitting at the extreme right of the assemblage when I felt a hand squeeze my shoulder. I looked up and it was Hopkins, who had flown on from Minnesota. He hir... looked like death, the skin of his fa... dreadful cold white with apparentl... flesh left under it. I believed tha... now had nothing left to live for, tha... life had ended with Roosevelt's.

After the service, Hopkins asked... wife and me to come to his hous... Georgetown. He went to bed and ... with him for a long time and listene... he talked. He didn't seem like ... now. Fire was shooting out of his ... in their sunken sockets. I drasti... revised my impression that he had ... ing left to live for.

"Now we've really got to begin ... said. "We've had it too easy all ... time, because we knew he was there ... we had the privilege of being able t... to him. DEFY DIAPHORESIS

During the war, The Springs Cotton Mills was called upon to develop a special fabric for camouflage. It was used in the Pacific to conceal ammunition dumps and gun emplacements, but the Japanese learned to detect it because of its lack of jungle smells. To overcome this, when the fabric was dyed, it was also impregnated with a permanent odor of hibiscus, hydrangea, and old rubber boots. The deception was so effective that when Tokyo fell, the victorious invaders hung a piece of this fabric on a Japanese flagpole.

This process is top secret, and the fabric is now available to the false bottom and bust bucket business as SPRINGMAID *PERKER* made of combed yarns 37″, 152 x 68, weight 3.30, the white with gardenia, the pink with camellia, the blush with jasmine, and the nude dusty.

If you want to avoid dancers' diaphoresis* and the steatopygic stance, kill two birds with one stone by getting a camouflaged camisole with the SPRINGMAID label on the bottom of your trademark.

HE HAD NO RESERVATIONS

Continued from page 23

to call a taxi and realized that he didn't know the numbers of any taxis. He looked in the wrong part of the telephone book and couldn't find any means of transportation listed under Taxi. He decided maybe the listing might be simply Cab but that, too, proved erroneous. Certainly, he decided, it wouldn't be under Hack. Even the fiends who concoct phone books couldn't be that illiterate. He was growing desperate when he happened to glance at the classified book and found dozens of cab companies listed therein.

HE WENT to Janice's home and found her there alone, her bags all packed. He kissed the nape of her neck and then her lips and then released her to stand at arm's length and adore her.

"Ah, my beautiful sweet," he said. "I can hardly wait until we're on the train and—" And then he thought of something. "Incidentally," he asked, "what train are we taking?"

"What train?" repeated Janice, staring at him blankly. "Why, don't *you* know?"

"You mean you didn't call the people?"

"What people?" asked Janice.

"Whoever it is that fixes up train reservations," said Chris. "I don't know who. Jane always takes care of things like that."

"Oh," said Janice flatly. "Jane always does. Well, I didn't. What do we do?"

"We might look in the phone book under tickets," said Chris and then he remembered the taxi episode. "No," he said, "that'd take the rest of the day. I'll tell you what. We'll just take a cab and go to the station and buy our tickets. I've got the number of a cab company."

They took a cab and went to the station and bought two tickets to Marina on the coast. After waiting two hours, they got on the train. Chris surrendered his tickets to a conductor.

"Will you please show us to our drawing rooms?" he asked.

"Sure," said the conductor. "Your reservations, please."

"Reservations?" said Chris and gulped.

He looked accusingly at Janice. Why hadn't she thought of reservations?

"I seem to have forgotten reservations," he told the conductor. "Can't you fix us up with a couple of drawing rooms anyway?"

"I can't imagine what use you'd find for two drawing rooms," said the conductor; "but I can't even fix you up with one. We're all sold out."

"Then," asked Chris, "how about compartments or bedrooms?"

"Nothing doing," said the conductor. "We haven't even got an upper berth. The only remaining accommodations on this train are a few seats in the day coach. Of course, if you two are mad at each other, I have no objection to your selecting seats at opposite ends of the coach."

By the time they had found two seats Chris had decided not to mention Janice's lack of foresight in not reminding him to get drawing-room reservations, and Janice had reached the same decision in regard to Chris.

"You know, I don't think sitting up all night's going to be bad at all," Janice said. "It'll be an adventure. Sort of like camping out. And besides we're going to have ever so much time for sleeping after this."

"I hope," said Chris, "that you aren't easily embarrassed. I'm going to kiss you right here in front of everybody."

He did and then they sighed and snuggled together and held hands.

Their contentment was not to be for long. As darkness fell, a small, stubby, bald-headed man seated himself opposite them and subjected them to a frank, scrutinizing gaze. Janice blushed a little and withdrew her hand from Chris's.

"Oh, don't mind me," said the stubby man. "I like to see young people hold hands. You just pretend I'm not here."

"We do not," Chris told him, "hold hands as a means of entertaining the general public. With us hand holding is definitely not a spectator sport. Do you mind?"

"Not at all," said the man. "Incidentally what are you two honeymooners doing in a day coach? You are honeymooners, aren't you?"

"After a fashion," said Chris.

"Gosh, you kids must be pretty green," said the man. "Don't you know they have private sleeping quarters on a train like this?"

"Do they really?" asked Chris.

"Sure," said the man. "A drawing room's the best, if you can afford it. But a compartment or bedroom's not bad. Even a roomette'd do in a pinch. Tight fit for two, though."

"Why," asked Chris, "aren't you, for example, all alone in a nice comfortable tight-fitting roomette, out of public sight?"

"My wife," said the little man indignantly, "forgot to make reservations. I can't understand it. She always takes care of things like that."

Janice noticed that a peculiar expression had come over Chris's face.

"I'll tell you what," she said. "Let's take this gentleman at his word. Let's pretend that he isn't here." Then she took Chris's hand and held it.

THEY were stiff and sore from sitting up all night when the train pulled into Marina. The sight of a blue, sparkling sea, however, and the smell of salt air revived their spirits and they were in a gay mood as they walked into the town's largest hotel. Chris went to the desk and asked for a suite of rooms—two bedrooms and a sitting room.

"You have reservations, of course?" asked the clerk in a tone of voice t indicated that he doubted it.

Chris turned to Janice. "Of cou you wired for reservations, didn't yo he asked in a voice as doubtful as t of the clerk's.

"You mean to say that you didn asked Janice.

"No," said Chris. "Jane always—'

"—takes care of those things for yo Janice completed the sentence. "H many other hotels are there in tow she asked the clerk.

"Two fair ones," said the clerk, " three or four fleabags that you woul be caught dead in."

The two "fair" hotels offered th nothing, not even hope.

"Let's try the fleabags," sugge Janice, wearily. "I'm willing to run risk of being caught dead in anyth that has a bed in it."

But the fleabags could provide th with no space; not even enough to caught dead in.

They had a leisurely breakfast, in spersed with a minimum of conve tion. Then they went for a walk al the seashore and returned to an e more silent lunch. After that they w to a motion picture which feature talking camel and bored them silly was dusk when they emerged from theater.

"Now what?" asked Janice dejecte

"I think a drink might help," Chris. "That is, if you don't need a ervation to get to a bar."

After the third drink, Tom Clark, friend Chris had mentioned to J came up and shook hands with Chris

"Well, well," he said, "what on e are you doing here, Chris, old bo Then he stared admiringly at Jan "Don't bother to answer that—" said, "not even in a vague general It sure is great to see you, Chris. on doing any fishing?"

"No more than you do," said C "Incidentally, this is Miss Janice son."

Chris nd drifted off to sleep. . . .

Chris awakened next morning overed two things: Janice was nd a note was pinned to his coat The note read:

Chris:

our friend found me sleeping bench and he was overcome mething akin to chivalry. He agreed to let me use his room and I did not say share. I'm sorry, dear heart, but I'm afraid this whole thing's a bust. As a matter of fact, I can state without reservations that it's a bust. Goodby and let me give you some friendly advice. The next time you decide to run away from Jane why don't you make it easy on yourself and take her along?

"Yours truly,

"Janice"

Chris read the note with remarkable equanimity. He was somewhat pleased to realize that he was not grief-stricken. He was, as a matter of fact, not even disappointed. He found it in him even to chuckle at Janice's parting crack about Jane. And then he leaped to his feet and started running.

Jane! *That note he'd left for her!* She'd be home sometime today. She'd find it, unless—

WITHOUT any help from anyone, Chris managed to get himself aboard a southbound plane. There are two things you can count on in airplane travel. You'll get lukewarm coffee and you'll have a gabby seat companion. Chris had both.

His companion was an affable, red-faced individual named Charley, who seemed to have dedicated himself to making his life an open book for the edification of even the most casual acquaintances. After having bared his dull soul, Charley leaned back and waited for Chris to contribute his share to the conversation. Chris just stared moodily out the window.

"What do you do?" asked Charley after an unbearable silence.

"Paint," said Chris.

"Pictures?" asked Charley.

"Yeah," said Chris.

"Magazine illustrations, huh?" asked Charley.

"Yeah," said Chris.

"What's your name?" asked Charley. Chris told him.

"I've seen your work," said Charley. "You know I've always wanted to meet one of you birds. What a racket!"

"Unh," said Chris, wondering why the confounded plane didn't pick up a little speed. Perhaps the hostess was dragging her feet.

Charley began thumbing through a magazine.

"The thing about you birds," Charley continued, "is you think you're prompting romance, but you aren't by a long shot. You're selling disillusionment. The beautiful babes you paint. Why, they don't exist any more'n unicorns! Do you think my wife'd be the mother of three kids if I really believed dames like this were running around loose?"

He shoved a full-page illustration under Chris's nose. Chris stared at it for a long time. The illustration was the one for which Janice had posed while wearing the abbreviated bathing suit. But, incredibly, the likeness was only superficially that of Janice. The living, breathing flesh and the soul of the picture were Jane. Obviously, while painting the picture he had been looking at Janice but in his mind's eye he had been seeing Jane. And that, he realized, accounted for his infatuation for the model; her faint resemblance to his own wife. Even the similarity of names might have contributed to the illusion. Janice. Jane.

"That dame," he said somberly to Charley, "is liable to be running around loose very shortly—unless I get home in time."

ENCOURAGED by a ten-dollar tip, the taxi driver broke all laws and speed records in rushing Chris to his home. He sprinted up the path and tried the door. Thank Heavens, it was locked. He opened the door and went into the house. Again, thank Heavens! The envelope he had addressed to Jane was still on the mantel. He tore the envelope open and stared blankly into it.

It was empty.

Obviously, in his haste to leave, he had either mislaid or dropped the note and, somewhere in the house, it waited to accuse and damn him. He began a frantic search, which was interrupted by Jane's arrival.

"Oh, my darling," he cried and took her in his arms. He kissed her tenderly and, as he did, he noticed an adorable curl at the base of her neck. This curl was the real McCoy. Janice's, he decided, was probably a phony. Why, he'd bet anything she used a curling iron on it.

"I've missed you so," he murmured. "It's seemed like months."

"Nonsense," laughed Jane. "We've been parted before."

"We'll never be again," declared Chris fervently. "I adore you, Jane."

"Now if you're through kissing me—and if you're not, say so, because I like it— I think I'll go unpack my bag," said Jane.

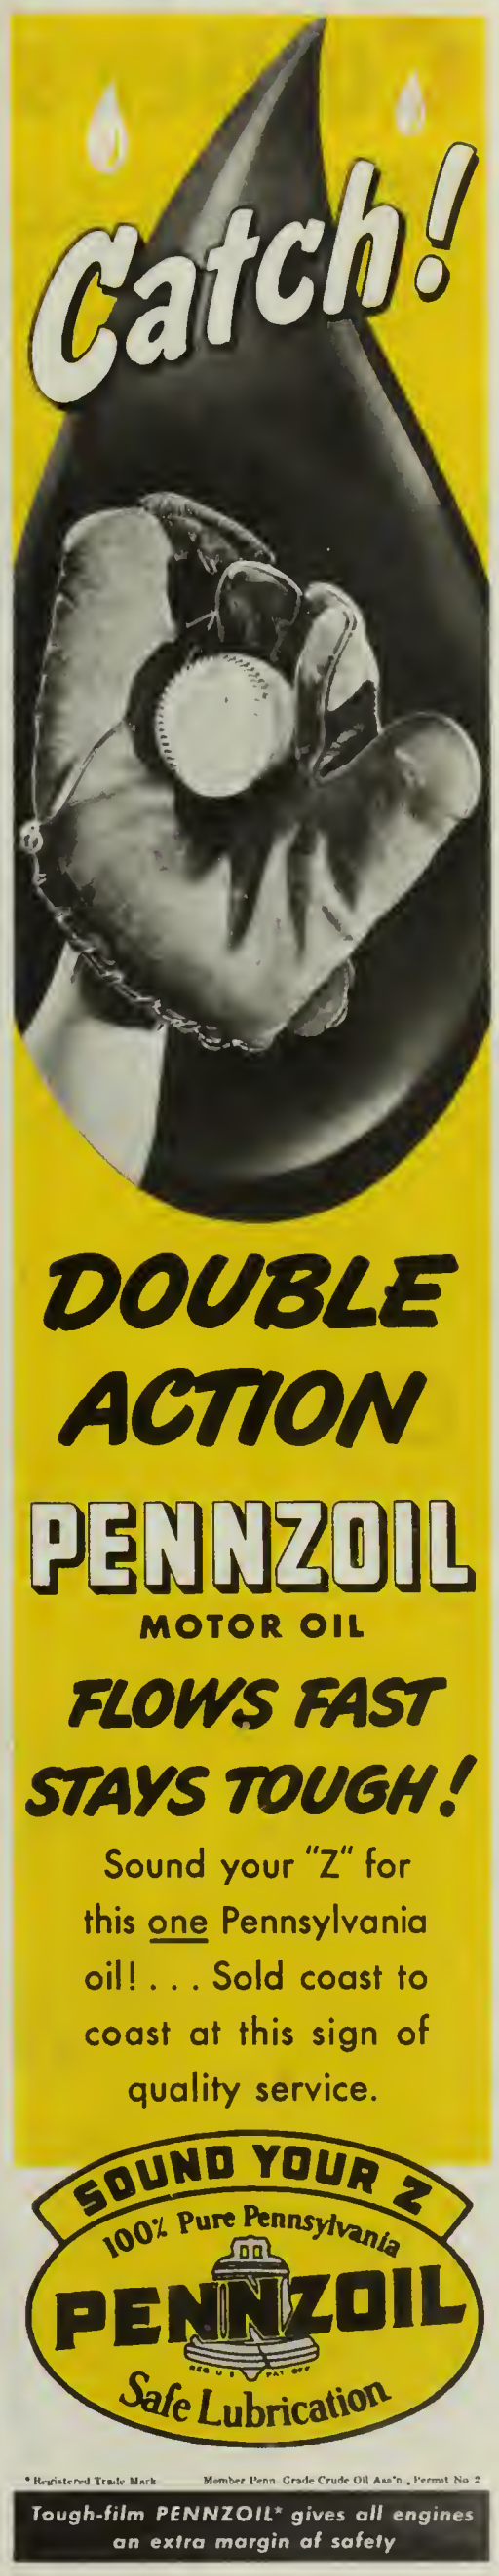
All was right now with Chris's world. He breathed a sigh of contentment, sank languidly into a chair and lighted a cigarette.

"Be a good girl," he said, "and unpack my bags, too."

He had completely forgotten about the note. He did not have occasion to remember it or what he had said in it until he returned home one night and found a package of new shirts waiting for him.

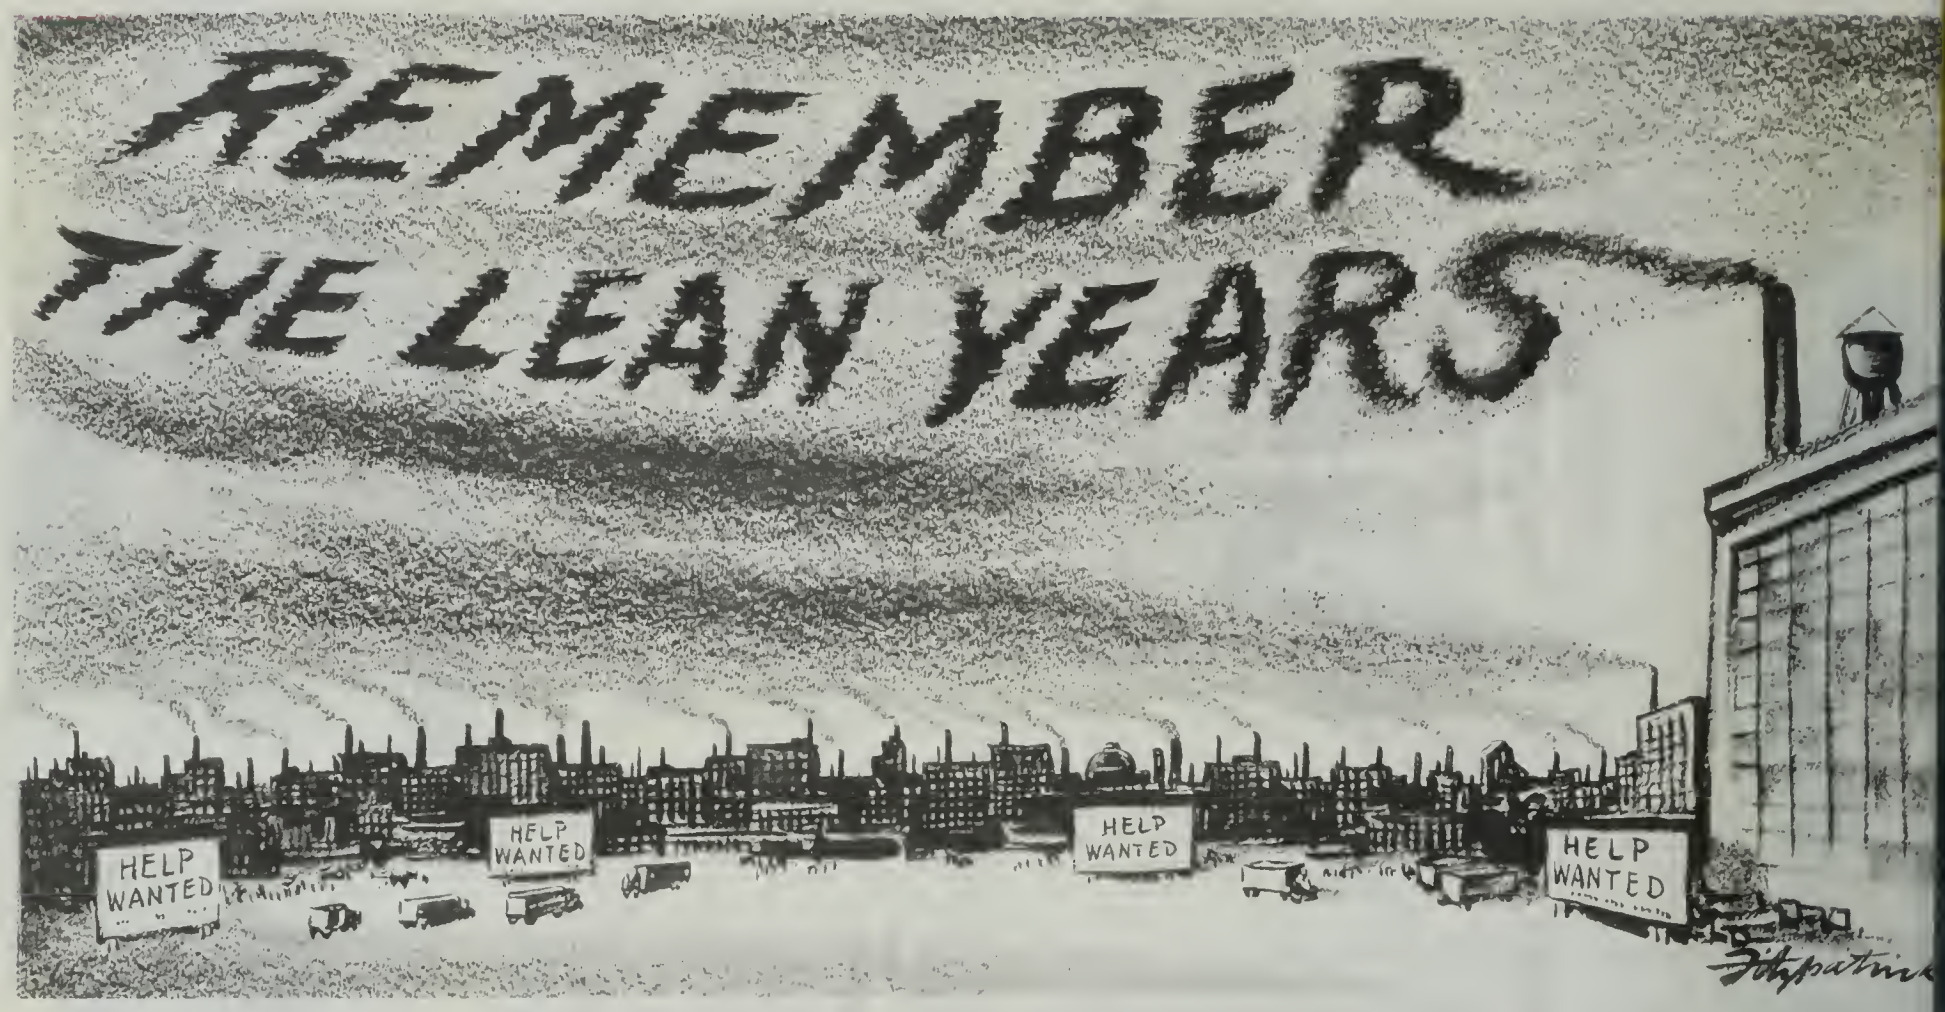
And then, in a searing flash, he remembered the note and what he had written in it, especially in the postscript.

He had instructed Jane to have his shirt collars made a half size larger.



With trembling hands he opened the package and examined the shirts. The collars were a half size larger.

Then that meant Jane had found the note. Or had she? Perhaps, in her usually efficient manner, she had anticipated his need for more space around his esophagus. On the other hand perhaps she was being devilishly subtle. Which?



There is a punishment for every crime; for every sin there is retribution.

Chris never did find out.

THE END

Collier's believes...

...NOW IS THE TIME TO DIG

ONE of the most persistently cheerful and ironic phenomena of the last three years has been and is the enormous number of paying jobs available to Americans.

It's a cheerful phenomenon because few things are pleasanter than to see almost everybody at work who wants to work. And it's ironic because so many economic prophets, before V-J Day, scheduled a record-smashing depression for us, to begin within scant weeks after the war. There were going to be at least 8,000,000 workers out of jobs, eating up their unemployment insurance and swarming onto the relief rolls—remember?

So, as this is written, we have more than 61,000,000 people holding down jobs in the United States—or 1,000,000 better than the 60,000,000 that Henry A. Wallace used to yodel about as being the ideal figure. Wonder what ever became of that particular slogan of Henry's anyway.

Nor have we reached the peak yet, if we can rely on assorted statistics and forecasts worked out by various government agencies, industrial analysts, and others in position to speak with authority. The Marshall Plan (ERP or ECA) is getting under way, and rearmament is firing up; and between them they bid fair to drain our pool of available labor close to the bottom.

The armed services will be requiring many kinds of goods, as well as about a half-million more men than they now have. To fill these needs, we'll have to round up perhaps 200,000 additional workers for the airplane industries in the next year or so, plus some 500,000 or more extra hands in a large number of other industries.

Where are they coming from? Well, it looks as if Rosie the Riveter, of World War II fame, will be back on the job before long in considerable numbers, along with a lot of kids fresh out of high school and quite a few old-timers who thought their working days were done. Workers in these categories turned in an impressive performance before, and they can do it again—and apparently will have to be urgently requested to do it again if we're to do a reasonably good job of meeting prospective domestic and foreign demands for our goods and services.

To repeat, this is mainly a fine state of affairs, and we wish it could last forever. Compared with the desperation of jobless millions in the long 1929-40 depression, this is Utopia, despite the galling inflation that goes with it and the Russian threat which so heavily contributes to it.

But, as the human race has known at least since the justly famed Joseph's time in ancient Egypt, fat years do not last forever. Up to now, they have always been followed by strings of lean years.

So we'll make bold to pass out a few tips to the customers—tips which may not make overly pleasant reading, but which we believe are of top value.

The gist of this advice is that now, in this flush period, is the time for anyone who wants to go on working indefinitely and better his or her condition along the way to dig in with the old extra effort, ambition, energy, application.

Give the job the best you've got, even if it isn't the most agreeable job you could imagine, or the one best suited to your talents and personality. Keep an eye open for that ideal job, but in the meantime don't neglect or slight the one you have. You'll regret it if you do—quite possibly to the extent of losing your present job and failing to connect with a better one.

To put out your best efforts now is the best-known way to make ready for the time when help will have to be laid off here and there, when some business concerns will fold, when demand for labor and goods alike will slack off.

In that melancholy period, those let out first will be, by and large, people who didn't pay much concentrated attention to their work in the fat years. The hard and conscientious boom-time workers will have the best hopes of hanging onto the pay rolls; the negligent, flip, don't-give-a-hang boys and girls will get the gate, while long-suffering foremen, personnel managers and even occasi owners howl with horrid glee.

Another smart thing to do in these fat yea to save what money you can and put it whe will be safe—in a savings bank, or into governm bonds, or into stocks that have long and consi dividend-paying records behind them, or into own home.

We're aware that this kind of talk sounds old-hat just now. A great deal of talk has gon rounds in the last decade or more about hov ciety owes everybody if not a living, at leas opportunity to make a living. It is true that d the depression the relief disbursements were generous, and a considerable number of good nothings profited thereby along with the mil of worth-while people whose only recourse to go on relief.

The cold fact remains that the thrifty person has stashed away some portion of his fat-year e ings is invariably better off than the wastrel the lean years arrive. And with our national at its present stratospheric level, there is grave tion whether relief allotments in any future pression can be nearly so generous or as widesp as they were in the last one.

By saving some of your present earnings, you will be doing what you personally can to bat the inflation now plaguing the country. tion is the result of the pressure of too buying power against too few goods to satisf mand. Taper off that pressure—defer that b power to another day—and you contribute bit to the eventual victory over inflation.

And that's about the end of the sermon fo week. We think it's the truth and nothing b truth about how best to get along in these fr fermenting, excited boom times that have upon us in the last three years. Those who their heads screwed on now will have the chance to keep said heads above water the time the going gets rough.

It happens to the nicest of Guys

ORDINARILY he was No. 1 on the hit parade as far as girls were concerned. But tonight he was getting the polite but cold shoulder over and over again. Something was wrong and he knew it...but he didn't know *what.** It can happen to the nicest of guys.

The insidious thing about halitosis (unpleasant breath)* is that you, yourself, seldom realize when you have it. Moreover, it may be absent one day and present the next. And when it *is* present it stamps you as an objectionable person to be avoided.

Don't Take Chances

Why run this risk? Why offend others when Listerine Antiseptic is a delightful *extra-careful* precaution against unpleasant breath when not of systemic origin?

You simply rinse the mouth with Listerine Antiseptic and, lo!...your breath becomes fresher, cleaner, sweeter, less likely to offend...stays that way, too, for hours in most cases.

When you want to be at your best, never, never omit this *extra-careful* precaution against offending.

Only Pan American flies to all 6 continents!

1 6 5 3 2 4

You can fly by CLIPPER* to
(1) SOUTH AMERICA, (2) EUROPE, (3) ASIA,
(4) AFRICA, (5) ALASKA, or (6) AUSTRALIA

● From eight leading U. S. cities, big 4-engine Pan American Clippers take off every day for 62 countries and colonies . . . *One* ticket and *one* set of baggage checks takes you straight through to your overseas destination.

Pan American has completed more miles of overseas flight than any airline in the world—over half-a-billion miles of scheduled *civilian* flying. Pan American has 105 Clipper Captains, each of whom has flown over a million miles, 29 who have flown over two million miles and 4 over three million miles.

Please Note: If you leave from one U. S. "gateway" city, but return through another, you still get 10 per cent reduction on your Pan American round-trip fare . . . And on almost every route, "the fastest way is PAA."

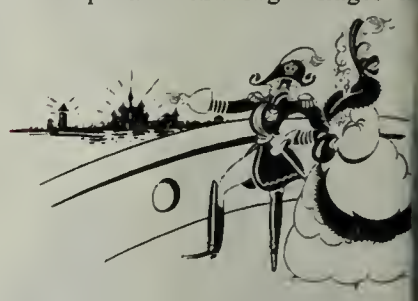
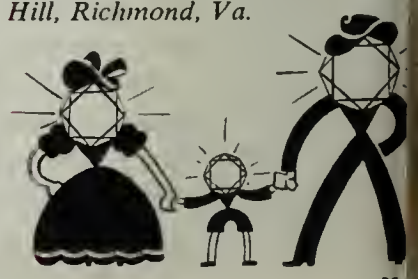
BY FRELING FOSTER



SEVERAL YEARS AGO, before fingerprint experts knew that prints could be successfully forged and transferred, a Chicago jeweler perfected such a process, as a hobby, shortly before he was sentenced to serve a prison term for sedition. Wishing to demonstrate his method before a convention of criminologists, he sought but was refused permission by the warden, who called his assertions nonsense. So the inmate, when alone in the prison office a few days later, took some money from the safe and planted the prints of the warden's son on the door. The next morning, after the robbery had been discovered and the fingerprints identified, the prisoner explained why and how he did it, much to the warden's relief.

SAILORS ARE BELIEVED to be the only occupational group that has its own private heaven, a paradise called "Fiddler's Green." Every good seaman hopes to go there when he dies, because it is a happy land where he has nothing to do but drink, sing and dance forever with a pretty lass.

MANY FAMILY NAMES in the United States are still spelled in an amazing and confusing number of ways, among the outstanding being Bailey, with 25 spellings, Snyder with 29, Burke with 40 and Baer with 45.



THE MOST STUPENDOUS costly deception of all time played on Catherine the Great Russia in 1787 by Potemkin, her f marshal. Believing his claim tha had already populated and m prosperous her recently conque Crimea, she insisted on visiting once-barren territory to see his fa lous achievements. Eventually, took the empress on a 1,200-mile down the Dnieper River and prou showed her—from the deck of boat—hundreds of large farms, fi of crops and thriving villages fi

with happy peasants. But Cathe did not learn for many years everything she had seen had b staged, that the towns were mad theatrical scenery and populated actors, and that all the sets and formers were transported ahead e night. On this gigantic hoax, Pot kin spent three years and nearly 000,000,000.

CONTRARY TO POPULAR lief, it is almost ten times easie shoot a hole in one in golf than to roll a perfect game of 12 cons tive strikes in bowling, as the against the golfer are 30,000 to against the bowler, 290,000 to one

AN AGE-OLD BELIEF which sisted up to the 20th century was various gems had sex and could produce offspring. In fact, as lat 1913, many a pearl diver of Bo still frequently laid away a likely of pearls with the expectation they would have a family.—*By H Hill, Richmond, Va.*

The Week's Work

IN HIS article, How The Reds Snatched Wallace (p. 14), Louis Francis Budenz raises the Iron Curtain to reveal Communist intrigue to obtain "custody" of Mr. Wallace. These revelations will be incorporated in Mr. Budenz's new book, Men Without Faces.

Mr. Budenz, it will be recalled, is the former managing editor of *The Daily Worker*, and a member of the Communist National Committee, who publicly renounced Communism and returned to the "faith of my fathers, the Catholic Church."

Born in Indianapolis on July 17, 1891, fourth-generation American, Mr. Budenz attended Xavier University in Cincinnati, St. Mary College in Kansas, and was admitted to the Indiana bar in 1912. In 1915 he entered municipal and labor reform work, and in subsequent years, was arrested twenty-one times in labor disputes and acquitted twenty-one times, gaining himself quite a reputation for breaking down legal barriers to organization.

Papa Budenz and Joanna enjoy the sunshine of a brand-new existence

Joining the Communist party in 1935, Mr. Budenz did comradely work till October 11, 1945, when he, his non-Catholic wife, and three daughters were received back into the fold at St. Patrick's Cathedral, in New York. Monsignor Fulton J. Sheen, who has influenced Mr. Budenz considerably, received them.

After a "year of silence," teaching at Notre Dame, Mr. Budenz exposed Moscow agent Gerhard Eisler over the radio. Mr. Budenz is now professor of economics, teaching labor relations at Fordham University.

THE latest of a long line of charming stories of adolescence by Josephine Bentham is She's a Big Girl Now (p. 20). She explains:

"In writing of young people, I have relied almost wholly on the memory of my own youth, because I feel that the emotions of youth don't change much. Every experience encountered for the first time is likely to lift one to the heights, or dash one to the very depths.

"What I remember most vividly is the embarrassment I was continually enduring. Just about everything I said, did or wore seemed the wrong thing to say, do or wear. I was convinced anyone who witnessed any small blunder of mine would remember and talk about it for the rest of his life. I ining myself the center of the verse made life interesting, but cult. And I am virtually sure, wh talk to young people today, that are in the same dire but fascin predicament."

Marriage '48

By VERA CASPARY

Beginning a new and significant novel of today, in which the distinguished author of Laura describes the erratic and stormy course of three modern marriages, each conceived in love, faith, and shining hope—and all haunted by the bitter specter of divorce

NO MATTER how unsentimental you think you are, nor how sturdily you vow you'll not let it affect your heartbeat, when the day comes, you go hollow. Some say it's like butterflies in your stomach, but to Lilith it was more like scorpions. If this had been her first wedding there might have been excuse, but now, on the fifth of June in the year of Our Lord, 1948, she was sufficiently aged and ripened (or so she thought) to take a dispassionate view of marriage.

With a formal wedding there would have been a million details to absorb her anxieties. Her first had been a nightmare tangle of caterers, striped trousers, silver mayonnaise bowls and distant cousins. She had been eighteen then, her fear dewy-eyed. Today, with two marriages behind her, fear was the fleshless image of failure. The only thing that kept her from putting on her old slack suit and whisking off in the roadster was her faith in Henry Fowler. Lilith had once described him as having bowels; a

nasty word but good enough for Shakespeare. Like everyone else Henry had his weaknesses, but he was not afraid of the diving-off place.

She rose that morning quite as if it were an ordinary day, had her fruit juice and coffee in bed, read the newspaper and dressed in her gray suit. As a last-minute concession to the day's importance she chose a pair of new white gloves which had been sent to her from Paris, with eleven other pairs, by an old admirer. Except for Henry's white orchid, she was less like a bride than a worldly young woman setting out for a morning cocktail party.

She had her best friend and business partner, Margery Sears, standing up with her, and Henry had brought Stanforth Grimes, a solemn pathologist in rimless spectacles, as best man. As they got into Henry's sedan, it looked more like a double date than a wedding, with Margery making coy advances to the pathologist.

OUTWARDLY Lilith and Margery were somewhat alike—the sort of young women who walk arrogantly into the best restaurants and make demands on headwaiters. In the tilt of their hats, the way their gloves crumpled at the wrists and the manner in which strings of small furs were slung over their shoulders was the air of breeding, experience and superb self-confidence. Lilith was softer, more appealing. Although she had tried, with all the perversions of fashion, to deny conventional prettiness, she could not disguise the symmetry of her features nor the fresh charm of her coloring. A slight slant gave distinction to her bright blue eyes and the freckles dotted on her nose were a welcome flaw. She wore her dark brown hair untinted.

"Nervous?" asked Henry as he started the car.

She pushed off the memory of an item she had read in the morning paper, and said, "Of course not."

"Well, I am."

"When you've been married as often as I have, darling, you'll find it's no worse than a hang-over." The metaphor she thought, was apt; falling in love being the intoxication, marriage the hang-over. But she wisely kept it under her hat. Although Lilith had often laughed at Henry for taking life seriously and had teased him about his righteousness, she loved him for his virtues rather than in spite of them.

Why else had she consented to a church wedding? It was not at all necessary for moderns of their sort. Neither she nor Henry had a relation within three thousand miles. But he wanted to please his mother. Old Mrs. Fowler had never been near California, but she was an invalid and amused herself with movie magazines so that she knew more about the Little Church in the Vale than Lilith who lived within ten miles of it. To please his mother Henry had chosen an altar at which many movie stars had taken their vows. Corny, Lilith had termed it, adding that if her friends knew, they would die laughing.

No, she was not at all nervous. When once the ceremony was over and she was safely Henry's wife, she would look back upon this journey and wonde why she had suffered. It was no worse than facing a half-hour in the dentist's chair, or the first dive into cold water. In her twenty-ninth year she ought to have learned that no reality can come up to the pain of apprehension. And she had promised herself sternly that she would not talk about her previous marriages, nor even think of them. If only she had not noticed that item in the morning paper!

They seemed to be creeping along the boulevard, but when they entered the canyon, Henry slowed down to forty. "Couldn't you go just a bit faster, darling?"

Henry shook his head. The road was steep and full of curves. "Suppose we get there five minutes later?"

Lilith looked at her wrist watch, pouted and beat her white-gloved fists against the cushions. "It's the first time I'm late to one of my weddings." As soon as she had said it, she was sorry. Her mind should have been fixed on the bright future with Henry, and not on her dark past. One marriage out of three, the newspaper had said, ended before the year was up. That was the latest statistic, not only for Los Angeles County where so many divorces were front page news, but for the entire nation. She was angry with the newspapers for having printed the item on her wedding day, quite as if the editors had known and put it there to worry her.

"Perhaps, darling, it's a sign, a warning, perhaps they won't hold the church if we're late," warned Margery, captious because the best man, after staring through his rimless glasses, had not given her a second squint.

"At the risk of being called a sourpuss for the third time today," the best man said, "I'm going to remind you girls that Henry and I were on time."

"For the first time in Henry's life," Lilith said.

"Yes, I take marriage seriously. I'm a stuffed shirt," teased Henry, throwing back words she had used in violent argument. "I happen to think that on your wedding day, you should forget business." Because he had contrived with fate to keep any of his patients from having babies that morning, he felt that Lilith could certainly have discouraged her customers.

She had locked the doors of her interior decorating shop, but her apartment was above it and there was an extension telephone. "Is it my fault that my best sucker got back to town this morning? After all, darling, business isn't so hot that I can afford to snub the Leveret millions. If it weren't for their new beach place, Margery and I might have to shut up shop."

"And let your husband support you. What a tragedy!" mocked Henry.

"I thought we'd come to an agreement about that," Lilith reminded him, bristling because he refused to take her career seriously.

"Sorry, dear. It was tactless of me to mention it." He bowed his head in mock humility.

They wound out of the canyon, crossed the boulevard and sped along an avenue lined with eucalyptus trees which had been planted as wind guards for the orange groves. It was a bright Chamber of Commerce day, June but not rare in a climate where such perfection is as typical of December. The gold of the oranges contrasted with the dark sheen of their foliage; on every fence giant roses grew; beyond were purple mountains. The only flaw in this picture postcard perfection were the trails of smoke made by the skywriters attempting to find a new advertising medium in the heavens.

THE little church was set cunningly among the live oaks of the hillside. Its stone terraces were guarded by low stone walls over which the roses ran riot.

At the determined picturesqueness Lilith shuddered. "I can't take it." She groaned and covered her eyes.

"Be brave," counseled Margery. "They don't shoot brides at church weddings. Although in most cases, it'd be the merciful thing to do."

Henry opened the car door but Lilith would not move. Having worked for years to shed convention, she found herself embarrassed by its shadow. "Couldn't we just duck down to the City Hall and be married respectably?"

"Hurry, we're late," Henry said.

"You could write your mother and tell her we'd been married in the church. How'd she ever know?"

He was not the sort of man to start his marriage with a lie. As if he had not heard her nonsense, he took her hand and helped her out of the car.

"I give you one last warning." She stood as if she had cast anchor in the pavement. "If they sing, Oh Promise Me, I'll scream."

"Will they sing?" asked the best man. "I thought if you wanted a singer, you'd have to hire him yourself. Or at least ask for it."

Even at this hour the tourists thronged, popped from behind bushes with cameras and stared hopefully at the girls behind the orchids. The church management guaranteed privacy to all wedding parties, and had an attendant posted at the door. When he saw the girls' corsages he knew these were no ordinary tourists. "Fowler-Clark?" he asked, consulting a typewritten page clipped to a wooden board. "You're late."

"Sorry," said Henry, "but circumstances . . ."

The attendant had not time to listen to excuses. "Your minister's waiting in the Groom's Chamber. He's been here seventeen minutes. The Bride's Boudoir"—he scowled toward Lilith as if he knew instinctively that she was to blame for the tardiness—"is up the staircase in the rear. I trust you won't be long. We've got three weddings this morning. The next party's here already."

Unconventional she was, but still woman enough to want her hair tidy while she was being marrie She went up to the Bride's Boudoir while Marge remained in the vestry garden, having a cigaret with the best man.

At the door of the Bride's Boudoir, Lilith paus to cast an experienced eye over the interior decor tion. It was what she had expected, all charm ar chintz like a movie set designer's interpretation the word cozy.

At the dressing table a girl in a white gabardi suit was combing a blond shoulder-length bob. S had taken off a white, flower-trimmed hat wi short veil, which lay beside her gloves, and a whi leather prayer book. When she saw Lilith s started gathering up her things.

"Excuse us, please," she said. "We were a litt early and they let us wait up here."

At the window were two young girls in ray taffeta and cartwheel hats.

"You girls needn't leave, I'll only be a couple minutes," Lilith told them.

The girls in taffeta giggled, whispered somethi about the ladies' room and scuttled out.

The girl in white gabardine offered Lilith h place at the dressing table. "You're ahead of m I guess."

"Are you being married this morning, too?"

"Yes, I am. At ten. Only we were all so ner ous, we looked at the clock wrong and got here most an hour early. I'm so nervous I'm sweatin Look," and she held out her palms for inspectio "That's very unusual for me, I don't usually swe much." Her voice was soft but rough in textu a working girl's voice.

VENETIAN blinds had been closed against t morning glare, and the dimness of the roo along with the gardenias' heavy scent made t room solemn, more like a funeral chamber than bride's boudoir. The two brides had little to s to each other.

"Cigarette?" said Lilith at last, and held out h gold case.

"No, thank you, I don't smoke. I don't kn why. I got nothing against it, some of my friends smoke like chimneys, but I never started."

Down below, in the parking space allotted members of wedding parties, a car rattled to a st "That's him," the little bride said, her pallor mottl by a rising blush. "My boyfr—the bridegroom mean. I can always tell by listening when that jalo comes along. He got here early, too." She laugh as in triumph.

It was not like Lilith to waste so much time o her make-up. Twice she smeared the lipstick, h to remove it and start all over again.

"I guess you're not having a formal weddi huh?" the young girl said, looking at Lilith's s and hat.

"No, I'm not."

"We're not either. Just two of my girl frie standing up as maids, and my cousin and his w from Glendale. I'd always dreamed of having wedding at home with all the folks around, when you think of the cost of everything nowada it's hardly worth it. I mean, when you've got to a home started and all. My folks are back Eas

"Where?"

"Colorado."

Lilith ordinarily would have been amused this gauche Western geography, but she only ha heard the girl's coarse-sweet voice. Irrelevan there had appeared, out of some guarded cavern her mind, the face of her (*Continued on page*

Lilith was reminded of the pale blue ribbon the imported slip that she had worn at her f wedding, and of the borrowed handkerchief tuc in her cuff. She couldn't refuse this girl n

ILLUSTRATED BY HARRY FREDMAN

On the first anniversary of his dismissal from the Truman Cabinet, Henry Wallace rails against anti-Russia hysteria. This was September, 1947, in New Yo

How The Reds Snatched Henry Wallace

By LOUIS FRANCIS BUDENZ

IF HENRY WALLACE should be elected President of the United States on November 2d, what would happen? Don't shrug your shoulders. Sure, it's unlikely—but you'll be better prepared to understand what I have seen and what I know by accepting the question.

First of all, there would be great rejoicing at the Kremlin, and delirium on the ninth floor of No. 35 East Twelfth Street, in New York, the headquarters of the American Communists. The party everywhere, in fact, would celebrate the election as a major victory and as the first long stride toward the sovietization of America. And with good reason. For although it seems certain that Wallace, a man of extraordinary unawareness, doesn't realize the extent to which he has been engulfed by the shifting quicksands of the Communist conspiracy, he is their man. But Wallace himself is not a Communist.

Moscow placed the stamp of approval upon him more than four years ago. Since he returned from a visit to Siberia in 1944, the Communists have never doubted that he would support any policy put forward by the Soviet Union and denounce any attempt by the United States to counter Russian aggression. As early as February, 1945, Alexander Trachtenberg, a top party boss who always knows what the Kremlin wants, said at a meeting of the Communist hierarchy in New York, "We are taking Wallace into custody." I attended this meeting as managing editor of *The Daily Worker*, the Communist newspaper published in New York.

Whether he realizes it or not (and he would be loud in his denials) Wallace is a prisoner of the Communists. Assuming his election, we could expect an inaugural address as woolly and unrealis as anything he has said so far, plus loud guarante of peace and abundance for everybody. Th would come the payoff. Belatedly, he'd begin see what he'd blundered into—how he had be captured. It might at last become clear to him th he owed more to the Communists than to any oth party or group.

He would be reminded brusquely that the Co munists conceived the idea of a third party, th they organized it, named it and chose him as th candidate. The comrades would be swift to po out that not only had Wallace failed to repudia Communist support, he had specifically refused do so.

If Wallace had dismissed his Communist follo ers (and if they had accepted the dismissal) would have been left almost alone. From the m

ment he announced his candidacy the ranks of his advisers have been loaded with Communists and fellow travelers.

Because of what they'd done for him, the Communists would demand representation in Wallace's Cabinet. And before Wallace, immersed in his visionary plans, knew what was going on, the Communists would be firmly entrenched in the government. Russian agents would arrive in swarms. Then would begin a sequence of events similar to those which resulted in the overthrow of democracy in Czechoslovakia, and the enslavement of other Eastern European peoples by the Reds.

At first the Communists would not be greedy. They know that America is at heart overwhelmingly antitotalitarian, and they'd proceed with caution, with their customary indirection.

They would permit a pliable nonentity to be named Secretary of State. Almost anyone would be acceptable during the period of transition in which American foreign policy was being changed to conform to the wishes of the Kremlin. But Communists or reliable fellow travelers would be slipped into the key Cabinet posts. They would appear first, probably, as Attorney General, Secretary of the Treasury, Secretary of Commerce, and Secretary of Defense.

In all probability the Communists would insist that Wallace name one of two men as Attorney General—Lee Pressman or John Abt, both left-wingers who were among the group that controlled Wallace's nominating convention. Pressman, a lawyer, was formerly counsel for several government agencies, and was general counsel for the C.I.O. until Philip Murray threw him out.

Abt is likewise a lawyer; he also has worked for the government, and was formerly counsel for the Amalgamated Clothing Workers of America, of which the late Sidney Hillman, not a Communist, was president. Abt is the husband of Jessica Smith, editor of *Soviet Russia Today*, a Stalinist magazine which was set up by the Communist conspiracy.

For Secretary of the Treasury, Wallace would certainly be urged to consider Frederick Vanderbilt Field, a rich radical who gives elaborate dinners for Communist big shots. At this writing, Field's town house at 16 West Twelfth Street, New York City, only a short distance from Communist headquarters, is the scene of the meetings of the group which does the "research" for Wallace's statements and speeches. Very close to Field is Paul Robeson, the Negro singer, who so admires Russia that he has had his children educated there. Robeson would be a natural for American ambassador to Russia.

And somewhere in Wallace's Cabinet, perhaps as Secretary of Defense (which would give Wallace's backers virtual control of the Army and Navy), would be Wallace's campaign manager, C. B. Baldwin, better known as Beany, another prominent left-winger. Baldwin has been close to Wallace for years; he worked for the Farm Security Administration—for a time he was the Administrator—when Wallace was in Washington as Vice-President and Secretary of Commerce.

In my files at *The Daily Worker* I had a list of government officials and others in Washington upon whom the Communists depended. Beany was on this list. Working with Baldwin, or perhaps as a member of the White House Secretariat, would be David Ramsey, former ghost writer for Earl Browder. He now assists in the writing of Wallace's speeches and public statements.

To be sure, getting confirmation of such appointees by the Senate might be a little difficult. But strange things have happened when politicians get scared. And consider the pressure that has stopped many an anti-Communist measure.

At any rate, the American people would read in their newspapers one morning that J. Edgar Hoover was involved in an anti-Wallace plot and had been ousted as head of the F.B.I. His successor would be a man of whom very few people had ever heard, but he would be a Communist, probably trained in Russian police methods. A little later the head of the Secret Service would be dismissed and some other unknown would take his place. This has been Communist practice in every country where they've gained control.

It is true that the duties of the Secret Service as authorized by law include protecting the President and his family and chasing counterfeiters and forgers. But this could readily be changed. The Wallace Attorney General could be induced to rule that it could be changed by Presidential directive. The phrase "protecting the President" could be subject to broad interpretation. It could, naturally, mean detecting conspiracies against his life. And the comrades would not fail to detect them.

I would be willing to gamble everything I possess or hope to possess that within six months after the inauguration of Wallace, a Sovietized F.B.I. or Secret Service would discover a conspiracy involving some very prominent Americans, perhaps Thomas E. Dewey, Harry S. Truman, Herbert Hoover, Arthur Vandenberg or General Dwight Eisenhower. Such men would be dangerous to a Communist-controlled government. Their liquidation would be necessary. Accusation, of course, would be tantamount to conviction. Civil rights? If the Communists get hold of the government, there will be no civil rights.

The F.B.I. and the Secret Service would be reorganized along Russian lines, and within a few months these agencies probably combined would be transformed into an efficient secret police force. Then would come the terror, with firing squads and concentration camps, and the abrogation of all the traditional American freedoms. Henry Wallace, too, would be dispensed with, once he had served his purpose. And after a lifetime of frustration and bewilderment, he would at last achieve one distinction—he would go down in history, rewritten, of course, on the Soviet model, as the last President of the United States.

If all this seems somewhat fantastic, consider how narrowly Henry Wallace missed becoming President when Roosevelt died in April, 1945, a year after Moscow had gathered Wallace to its bosom and while the Communists in this country were already boasting that they were "taking Wallace into custody." Whether Roosevelt was aware of the Kremlin's absorbing interest in Wallace is unknown. But if he had not refused to accept Wallace as his running mate, the corn-fed hero of the comrades would be sitting in the White House today. And if the Communists are correct in their appraisal of the man, the United States might be well along the road toward totalitarianism.

Not even the top men of the American Communist party know what, if anything, happened during Wallace's visit to Siberia to cause the Kremlin to send urgent directives to this country that his political ambitions were to be supported. Moscow's orders are never explained, never questioned, never disobeyed.

Instructions from the Kremlin concerning Wallace began arriving in the United States while he was still in Asia. Most of them at that time were transmitted by Hans Berger, also known as Gerhard Eisler. Until he was arrested and held for deportation, Berger was one of the most important of the shadowy figures who flit back and forth between Moscow and New York, carrying orders for the Communists in America.

The American people never knew much about Wallace's adventures in Siberia except what they read in the newspapers, and what was disclosed in his book, *Soviet Asia Mission*. Perhaps there was nothing more to know. Wallace has been almost as reticent on this subject as on the notorious Guru letters with all their mystical abracadabra. In Soviet Asia the englamored Wallace praised conditions. Speaking in the slave-labor region at Irkutsk, he proclaimed that "men born in wide, free spaces will not brook injustice and tyranny. They will not even temporarily live in slavery."

This noble utterance was made soon after Wallace had posed for a photograph with Ivan Nikishov, chief of the NKVD (secret police), and dictator of Russia's slave empire. Wallace described Nikishov as "an industrial boss." One of the leading American Communists announced that Wallace's Siberia speech, with its apparent approval of the Russian slave-labor system, indicated "a deep understanding of Soviet democracy and how it had to defend itself." I do not remember that Wallace at that time mentioned the Soviet slave camps or the terror under which millions of Soviet prisoners live.

While Wallace was on his Siberian-China trip, an insistent directive came through from the Kremlin ordering the party here to support him. The Russian press and radio leaped to his defense every time he was criticized. I was told by Alexander Bittelman that the Kremlin would support Wallace. Bittelman, an extremely important member of the Communist movement, is the chief theoretician of the party, and his interpretation of a Moscow directive is always accepted as final.

The Communist campaign to take Wallace "into custody" began in late June of 1944. On a hot night in that month I was busy at my desk in the office of *The Daily Worker* when Jack Stachel burst into the room. Stachel is a dark, dour man with a rasping voice and a habit of blinking his eyes rapidly when talking or thinking. For years he has been an important member of the party's Political Committee, now called the National Board, which is the executive committee of the National Committee. Even among party members Stachel is noted for the agility with which he follows the twists and turns of the Moscow line.

Stachel was greatly excited. He told me to come upstairs at once for a special meeting of the National Board. Urgent orders from Moscow had just been received through Hans Berger that Henry Wallace was to be supported for the Vice-Presidential nomination at the forthcoming Democratic National Convention. Only Stachel did not say "from Moscow"; the Communists seldom mention the Soviet capital. With characteristic indirectness they say that a message has been received "from across the sea" or "from the east," or even, sometimes, simply "from there."

When the meeting convened, six or eight top-flight Communist leaders were present, including Earl Browder, Eugene Dennis, Robert Minor, Jim Ford and Alexander Bittelman. And, of course, Jack Stachel. Alexander Trachtenberg was also there, though technically not a member of the Board. Trachtenberg is head of the publishing house which handles translation of the writings of Lenin and Marx. Hans Berger was not present. He had gone underground and was not appearing at such conclaves. However, full reports were made to him by Stachel and Bittelman for transmission to Moscow.

I was not a member of the National Board, but as managing editor of *The Daily Worker* I attended many of the Board's meetings. It was my duty to transmit the decisions of the Board to the rank and file of the party, by means of articles and editorials in the *Worker's* daily and Sunday issues. I also wrote basic articles on the party line for *The Communist*, the theoretical organ of the party, which is now called *Political Affairs*.

No written record of the proceedings was kept, although before the Hitler-Stalin pact in 1939, which partitioned Poland and loosed the German hordes upon Europe, a stenographic report was sent secretly to all members of the National Committee and to district leaders.

The instructions from the Kremlin caught the members of the Board by surprise. Only a month before, Adam Lapin, Washington correspondent of *The Daily Worker*, had surprisingly been ordered to write that Wallace was too intemperate in his criticism of big business, and that if he was defeated for the Vice-Presidential nomination it would be largely his own fault. This was at the time when the Communist party had been officially "dissolved" and transformed into the Communist Political Association, and during the period when the line was to concede graciously that *(Continued on page 76)*

This is the simple story of how the realistic Reds took dreamy Henry Wallace "into custody." Should he miraculously be elected, here's what's going to happen. Told by a man who helped draft the plan. Read it—you, too, Henry. You'll learn a lot

THE WEDDING PRESENT

By STUART CLOETE

He had fled up into the Baviaansberg —the Baboon Mountain—to get away from people. He couldn't trust them, he wanted no part of them—but there was a girl who believed in him, a girl he loved

WINNER OF THIS WEEK'S $1,000 FICTION AWARD

Collier's ☆ STAR STORY

ILLUSTRATED BY DAVE MINK

EVERYONE has heard of children being stolen by baboons. Just stories, none of them proved. But when a man goes to them—among them—then it's something. Yes," he said, "then it's something, all right, and that's what happened 'ere. Ought to be locked up, that's what he ought ter be."

"Here," I said.

" 'Ere," the man said. Then he stuck out his hand and said, " 'Erbert's the name."

"Where?" I said. "I mean, where is the man who went to the baboons?" It struck me as rather a humorous way of putting it—like a man going to the dogs. Bars are few and far between in that part of Africa, and I was in a friendly mood. My informant, Mr. Herbert, was garrulous, almost quarrelsome. But talk is meat and drink to me; so I thought: I'll draw him on. Worth a drink or two, I thought. So I said, "Tell me, Mr. Herbert, I'm a stranger here and— What will it be?" I pushed my glass forward suggestively.

"Brandy," he said. "And a glass of water."

The barman smiled and said, "Yes, Floater." He seemed to know him well.

Herbert laughed. Taking the water he drank it down, then he took the little glass of brandy and drank that. "Some folks take a chaser," he said, "drink the spirit first and then chase it away. But me, I'm different—I like the taste of it in me mouth so I floats it—like oil on the top of the water in me stummick. It's the stummick juices wot combines and makes it float like oil."

He was a big man and there was no point in arguing with him, so I said, "—And the baboon boy?"

"Ah," he said. "It's this way—" he paused and wiped his mustache with the back of his left hand. "The man was in the war, of course, and that might make a difference. After the last one – the great war—I was a bit queer myself. Went a bit mad over the girls—the little dears," he smirked. "But baboons." He banged his empty glass down on the counter. "Says he likes 'em. Says they're more human than people, more friendly-like, imagine that—than humans."

He shook an immense finger in my face. "Air Force. He was shot down and a prisoner, in solitary, too, and beaten up they say, and so I make a lot of excuses for him. If it was drink or girls I'd say nothing. But baboons is a bloody scandal. He's writing a book about 'em, they say. About their 'abits and loving ways. Like a lot of bloody Communists, them monkeys are, all minding one another's business. And one another's wives—free love and no morals."

"You're all for morals," I said. "Against free love."

"Yes," he said. "Communists—robbers."

"But the man, tell me about him."

"Him? Nobby," he said. "Clarke's his name. Nobby they call him. Did you ever figure that one out, Mr—?"

"Fraser," I said.

"Mr. Fraser," he said, "why's every man in the British army whose name is Clarke called Nobby?"

"Don't know," I said, "but it's true."

"Yes," he said. "It's like all Americans with red 'air being called Red. All sexes. I lived in America once. I used to—"

"Clarke," I said.

"Yes, Clarke," he said. "Nobby. His granny left him a little money, they say, and he's got a little pension and he lives in a pondokkie, a hut, up in the mountain on some land that belongs to him. He bought a piece there and built his house himself with a couple of Kaffirs. Below the house, half a mile away, he's got a shed for his old car. Can't get her any nearer than that. After that you got ter climb. I've seen where it is but you wouldn't catch me going there, not me. Before that he lived in a cottage near the sea, and that was bad enough."

"It's a wild bit of country, gentlemen." The other man, who had been leaning against the counter at the other end of the bar, came up to us. "Very wild, but for those who like it, wonderful. There's a splendid view of the sea," he said, "of the great rocks with little beaches and pools between them, and up the valley is the *kloof*, the ravine leading into the high berg behind him. And the whole place is alive with baboons. Always must *(Continued on page 80)*

The baboons said, "Stay quiet. He'll get you out." I used the tire lever. In a minute she was free

The World's Biggest Store

By DICKSON HARTWELL

Name your item, and Macy's will provide. If they don't have it they'll get it from somewhere on earth. The huge store in New York is feared by its competitors. But its customers snuggle up to it like chicks to a mother hen

Beneath Macy's motto, "It's smart to be thrifty," shoppers have found everything from canaries to carousels. This is an aerial view of the mammoth store taken from the Empire State Building

PHOTOGRAPHS FOR COLLIER'S BY HANS KNOPF

A MAN wishing to select a c reer girl for a wife, one sound limb and mind, ar holding down a $3,500 $30,000 a year executive jo will find more of them concentrated und one roof at Macy's New York departme store than anywhere else in the world. T people familiar with the fantastic, som times pixilated Goliath that is Macy's—u doubtedly the strongest shopping-mon magnet yet devised—a large and divers fied stock of unusual items is not surpri ing. At one time or another New Yorke have purchased Macy ponies, airplane canaries, automobiles, and prefabricat houses.

Every day more people crowd into th square block of Macy's than live in D Moines, Grand Rapids or Salt Lake Cit Sometimes jammed into the store is a pop lation equal to that of Atlanta, Louisvill Portland or Denver. These are the jackp days, when sales top $1,000,000 and have ev reached $1,481,072.

Although ninety years old and homel Macy's is a vigorous enterprise. It is ali with unceasing pother that extends from t tremendous expanse of toys, center of t Christmas universe for 300,000 childre through acres of furniture and women's ha and on into a conglomeration of blueprir maintenance, carpenter, sign-painting, prin ing and testing shops, the whole erupting wi elevators and punctuated by cavernous spac piled high with reserve stock. Through a this strangers may wander for hours, u recognized and lost.

The store executives can usually be ide tified by a peculiar gait, neither running n walking but somewhere between—a half lop half heel-and-toe. Even when briefly halte they always seem poised for a quick sta

The Tempo Is Slower in Other Stores

Most department stores operate more le surely. A Macyite, recently resigned from competitor, described his first-day reactio "It's like stepping out of the Smithsonian I stitution into Forty-second Street and Broa way," he said, panting.

In retailing circles Macy's is the most fear by its competitors. But its customers snugg up to it like chicks to a mother hen. A millio new ones appear each year—shopping, e bowing and buying an average of more tha $4 a sale.

It is the world's best-known store.

It has the world's largest drugstore, whe 1,000,000 prescriptions have been filled in t last ten years. It has the world's largest fan grocery. In one year Macy's bookstore so 750,000 books; its barnyard department so 1,000,000 baby chicks.

With equal equanimity Macy's clerks s a mink to a Rockefeller or $3,000 worth

silk prints for the harem of a Saudi Arabian prince. Fur jackets totaling $90,000 sell in two hours; 12,000 neckties and 975 mouton coats go in a day.

Macy's is 27 stores under one roof. It employs some 300 people to represent its customers and beat out the brains of any Macyite, from the president down, who tries to get by with shoddy merchandise, exaggerated sales talk or high prices. It has a merchandise-checking Bureau of Standards that is so particular it deems ordinary moths inadequate for testing mothproof fabrics; it must breed its own wool eaters jam-packing them with vicious vigor.

Paging a Lady Shopper by Telegram

Macy's $50,000 Thanksgiving Day parade, seen annually by 2,000,000 happily gaping onlookers, is one of the world's biggest publicity stunts. More than 55,000 people a week begin letters with: "Dear Macy's . . . " and at least one telegraphed: % R. H. MACY NEW YORK, MRS. LEE WALLACE, PAGE GROUND FLOOR FIRST ENTRANCE OFF SIXTH AVENUE, JUST INSIDE DOOR. CAN'T MEET YOU TODAY. PAPA.

Although regarded by a few as less than fashionable, Macy's reputation is based on a combination of economy *and* style. Its interior decorating department has a laundry among its clients, to be sure, but it also has major corporations, resorts (including Fred Waring's Pocono Inn), the U.S. Military Academy at West Point, the staff residences of the Camp Upton atom-bomb laboratory, the presidential mansion of Liberia, and President Truman's yacht.

Clients may spend from $3,000 to $300,000 but none was more surprising than a twenty-one-year-old Syrian who walked into the store, plunked down a stack of greenbacks four inches high and demanded designs, plans and specifications for equipping a fifty-room Syrian resort hotel which he could describe only vaguely. He got them, too, and spent $200,000.

Wealthy Macy customers, while itching to save a few pennies, used to deny having traffic with the big store. In recent years, though, regulars have included 13 Rockefeller families, Prince Felix and Grand Duchess Charlotte of Luxembourg, Princess Marie Anne of Portugal's House of Braganza, James Verner Reed, William H. Vanderbilt, Vincent Sheean, Mrs. John P. Marquand, Maurice Evans, Dorothy Thompson, Greta Garbo, Harry Guggenheim, Joseph E. Davies and Mrs. Winthrop Aldrich. When California's Governor Earl Warren was in New York at the time of the Republican convention he sat quietly in Macy's while Mrs. Warren tried on hats.

Least-known among the store's operations is the department run by Miss Hertha I. Hanssen to substantiate Macy's controversial claim that it undersells charge-account stores by six per cent on all comparable merchandise on which prices are not fixed by law. To maintain this policy Macy's employs a large staff of secret operatives who keep track of competitor prices within a fifty-mile radius, including five-and-dime stores and neighborhood shops. These comparison shoppers comprise the world's largest organized force of bargain hunters. As many as 125 of them may be scouring the town at one time. They shop some 40,000 items a week. Their purchases amount to $250,000 annually, making Macy's one of the biggest retail customers in New York.

Miss Hanssen is the absolute dictator of Macy's prices. No executive, not even president Jack Straus or chairman Beardsley (pay-as-you-go) Ruml will take an appeal on her decisions or ask her to change one. Macy buyers often may watch with pleading, wounded eyes while she knocks down to cost, or below, the price on merchandise they bought too dearly. But they seldom argue. When Miss Hanssen cuts a price—about 600 times a week—a department is given 20 minutes to make the change. No time out is permitted for making appeals.

Macy's may buy up all the goods on sale by a competitor who has undercut cost. But if Macy buyers try to take their merchandise out of stock to avoid meeting a competitor's temporary price cut, Miss Hanssen is on them like a schoolma'am crisply ordering them to take their beating. And she watches every article in the store.

When rival B. Altman & Company turned out an apple pie for $1.10 Miss Hanssen discovered the Macy model sold for $1.30. Said Macy's baker, "It's not the same as ours." Miss Hanssen measured the diameters. They were the same. She measured the contents. They were the same. She tested the crust, she sampled the aroma. She noted that Altman's provided a tin plate, Macy's a paper one. She tasted both pies. She made the baker taste them blindfolded. "Macy's might be better," she finally ruled, "but not 20 cents better. Reduce the price to 94 cents." The baker moaned, "But it cost me 95 cents to make."

"To 94 cents or go out of the apple-pie business," said Miss Hanssen crisply.

Probably the most difficult period in Macy's history occurred ten years ago when the store was forced to compromise its buy-and-sell-only-for-cash principle. A couple of generations ago a cash buyer was considered a man of virtue. The use of personal credit at one time was regarded as a step along the highroad to hell. More recently such virtues have become secondary, in winning community esteem, to a mechanical refrigerator, a washing machine and similar appurtenances costing somewhat more than a washboard. Installment buying made these goods available to huge and eager markets, and Macy's found that its immovable cash policy was bucking an irresistible trend.

For two and a half years Macy executives sweated and finally evolved an ingenious credit scheme. It's called Cash-Time. It permits installment-buying of almost all Macy goods by all customers. And the skirts of the precious less-for-cash policy are kept clean by charging over 100,000 Cash-Time buyers 6 per cent more than is paid by purchasers who put cash on the line.

A Quarter Million D.A. Customers

Macy's answer to customers who demanded charge accounts as a personal convenience, rather than as a means of deferring payment, was Deposit Accounts, begun in 1902. This device is simply a bank. Customers deposit money with Macy's and charge goods against their deposits. Macy's has some 250,000 active depositors.

The cash-on-the-line policy itself is not always inflexible. When General Eisenhower moved into his house at Columbia University, Mrs. Eisenhower needed extensive furnishings. She dispatched a secretary to Macy's. But the secretary had no money and a C.O.D. would be inconvenient. Macy's decided to trust the new president of Columbia, and the goods were delivered and billed for later payment. The naval hero of the Spanish-American War, Richmond Pearson Hobson, was not similarly honored. In 1898, when his fame was as great as Eisenhower's is today, his mother ordered a pair of slippers for her illustrious son. Because no cash accompanied the order Macy's refused to deliver them.

Some manufacturers have blacklisted Macy's for generations because of the store's cut prices. Some book publishers refuse to sell to them, and Macy buyers have ranged as far west as Texas to get best sellers at retail for sale at 6 per cent less.

Macy's major reply to price fixing by law on standard merchandise is to sell similar products under its own brand. Not only are vast quantities of goods made to specifications, but buyers purchase manufacturers' end-of-production *(Continued on page 73)*

The blindfold test helps Macy's grocery executives compare brands of bologna. Hertha Hanssen, price arbiter, conducts test

Miracles of selling are performed on the crowded stage that is Macy's brightly lighted street floor. Below, the telephone order board, part of the swift backstage machinery which receives all telephone orders and speeds delivery to millions of customers

She's a big girl now

First she had to solve the painful problem of growing up. After that the boy next door was putty in her hands

FROM the vantage point of a front porch step, Sally Richards surveyed her world. It was a new world, and in many ways more interesting and exciting than the familiar stretches of the African Gold Coast and the Malayan Archipelago. She was now turning an adolescent gaze on the town of Medville in a Middle Western section of her native America, and finding the very look of it as good and nourishing as corn on the cob.

As the daughter of Septimus Richards, the distinguished anthropologist, she had traveled and lived in some strange and exotic spots. And as a companion to her father and his learned colleagues, Sally had been given an informal education that not only ensured her entry into the graduating class of the Medville High School but gave her a considerable edge in Greek and Latin, to say nothing of Swahili. But, of the extracurricular activities of the American young she had no knowledge—and therefore no fear.

Sally yanked a shrunken and faded old sweater over her blue jeans and ambled down the porch steps to a great, untended lawn. Not many years ago this property had been farm land. An old red barn still stood at some distance in back of the house and a long-abandoned well, choked with trailing vines, was midway between barn and house. Sally's father had commented on the enormous job it would be to tidy up the place, but Sally liked it as it was. She had not yet acquired any great feeling for orderliness.

As she came to the well she stopped short, extremely pleased to behold a person of the opposite sex, also in blue jeans, who was mowing the grass next door. He was a good-looking boy, with a thick mop of ginger-colored hair. He was lean and lithe and, although he obviously felt no love for the lawn mower, he handled it with easy strength.

He caught her eye and flashed a grin. "Hello!" he said.

"Hello!" said Sally.

She had no way of knowing that love had come to her instantly, like a rocket shooting across that untended lawn. She was dimly aware of a warm feeling in her bones, as if they all had turned to molasses. And in her innocent and happy excitement she hurried right over to him.

"I guess I'd better introduce myself, hadn't I? I'm Sally Richards and we've just moved in, my father and I! My father's Septimus Richards, but I guess you've heard of him, haven't you? He's sort of famous. Oh, perhaps I shouldn't say that about my own father because he'd have a fit, but it's only natural to be proud of your father if he's famous, don't you think so? But anyway he's going to write another book and we're going to live here for at least a year and I'm going to high school!"

The boy seemed a trifle dazed. "Are you?" he said.

"Oh, yes! Isn't it wonderful. I was only fifteen the week before last and that's sort of young to be a senior but I had a lot of private tutoring. But, oh, my gracious, I'm talking about myself all this time! Are you a senior, too, by any chance? And what's *your* name?"

"Tom Whitney," he said, staring at her.

It was hard to pry more information out of him but she went at it patiently, in the manner she had employed when dealing with shy contemporaries in blackest Africa. She had the advantage here in that she could speak in English and not in some smattering of dialect. Pulling the facts out one by one, she discovered that Tom Whitney was sixteen years in age and five feet ten inches in height, that he had a sister Paula who was eighteen and a sister Mercedes who was seven, that he had not yet decided on his career in life, and that his favorite pastimes were football, baseball, swimming—and going to the movies if they didn't have too much mush in them.

Sally could scarcely believe she had found such an interesting friend before she had been in Medville a week. She beamed on him in artless pleasure.

"We'll have such loads of fun!" she cried.

"Yeah, sure," he said.

He was not a very talkative person, she thought indulgently. But so many of the bashful native boys, who had not been talkative at first, had babbled like anything when they felt better acquainted.

"Well, but excuse me," he said at last. "I guess I'd better be mowing this pasture."

She thought it witty of him to have called the lawn a "pasture," and laughed appreciatively. She watched him pursuing his work for a few moments, then she turned and headed for home. She had not yet reached the stage of walking gracefully from point to point. She saw an objective and lunged toward it, eagerly, like a colt, and sometimes she bumped into things.

Luncheon was ready by the time she returned;

By JOSEPHINE BENTHAM

ILLUSTRATED BY ALEX ROSS

the punching bag. "Mercy!" Sally said

she seated herself across the table from her father, and Trevor brought in cold meats, salad and hard, salty little biscuits. Trevor was the elderly but indestructible Englishman who accompanied father and daughter on all their travels, serving them in jungle, desert or forest with the same imperturbable dignity that he was bringing to the present occasion.

Sally had much to set forth.

"Oh, Dad, there's the most wonderful family next door you'd simply never believe it! There's a boy about my age and he's the only one I've met so far, but there's a girl two years older and a little kid! Oh, imagine having such nice neighbors along with everything else! This big old house and me being so near school and you having such a perfect place to write in and—oh, everything, Dad!"

SEPTIMUS RICHARDS smiled at her, but with a certain trace of concern. He had often reflected that, even if Sally had not been his own child, he would have marveled at her qualities. She had great generosity and instinctive kindness, loyalty and high courage. Yet he worried over her.

She had lost her mother when she was three and he was beginning to realize, ever more keenly, what a tragedy that was for her. A mother could have led her over the difficult steps of these transition years. As a father, he felt helpless and inefficient.

"Sally," he began, "you mustn't expect too much all at once. You know you've had a rather strange life for a young girl." He looked at her ruefully. "I'm afraid I've thrown you too much with people in tribes! It will be all quite different now. People will be *individuals*—"

He faltered here, knowing no way to say that these individuals might misunderstand her eager, natural friendliness. The time had come for her to discover, for herself, all the little cruelties of a civilized world. There was no possible way to protect her from them, but his heart ached for her.

"You're a good girl," he concluded. "You'll come out all right."

Sally was mildly perplexed. "Why, you mustn't worry about me, Dad! I'm simply going to love the people here! I know I am!"

He nodded, sighed, and let the subject drop. . . .

Right after lunch, Sally bounded over to the Whitneys'. Tom wasn't home, to her vast disappointment, but she met his mother and sisters.

Mrs. Whitney seemed amused. "Tom doesn't always favor me with his confidence, but he'll be home this evening, so far as I know."

Paula was eying Sally as if she had been something fallen off a leaf. "You lived in Africa, didn't you?"

"Oh, just the last couple of years. Before that it was Alaska. Dad's quite an authority on the Eskimo, you know."

Paula hadn't known, and she did not appear particularly impressed. Apparently Sally had more charm for little Mercedes, who had been subjecting her all this time to a candid, round-eyed appraisal.

"You're diff'rent, aren't you?" demanded Mercedes.

"Mercedes!" cried her mother, in despair. "What a thing to say! You'll have to excuse her, Miss Richards. She says anything that comes into her head."

Sally had never been called Miss Richards before and it embarrassed her a little. But before she could make any comment on the matter Paula had cut in to remind her mother of an appointment with the dentist.

Sally jumped up. "Goodness!" she said. "You should have told me! After all, we're neighbors and I don't think we should stand on any ceremony, do you?"

Mrs. Whitney smiled and patted her shoulder. She was extremely kind. Sally could scarcely say goodby over the lump in her throat. It was so wonderful to be in her own country at last, and to be making friends. . . .

She telephoned Tom that evening. There was a Western movie playing in town and she thought it would be fun for them to see it together. "No mush in it!" she reported.

"Oh," he said, and hesitated a second. "Well, I'll tell you—I've kind of made a date to go bowling with some of the fellows. As a matter of fact."

"Okay!" she said blithely. "Better luck next time."

As she was putting down the telephone her father came into the hall. She explained the situation. "I think I'll have to take up bowling, too," she said.

"Sally—"

"Yes, Dad?"

"Never mind. I forgot what I was going to say."

He had not forgotten, but he could not bring himself to tell her that she should not have telephoned young Whitney. The days of her innocence—even the hours—were measured. She was like a little Eve who had not yet tasted the fruit of the Tree. He could not bear to put that fruit in her hand, and bid her eat—

The next day she gathered together her gigantic collection of African photographs and, with laden arms, set forth for the Whitneys'. This time Tom was home and he did not seem in the least surprised to see her. He sat beside her on the porch swing and looked at all the pictures and listened to her explain about them.

She talked right along, hardly pausing to draw breath, because she had such a deep, inexpressible longing to share all her treasures and experiences with him Mrs. Whitney and Paula came out to the porch for a while and went back into the house, but Mercedes, licking apricot jam from a large piece of bread, kept meandering in and out.

Sally closed the last of the albums with a bang. "There!" she said. "Now you know all about my terrible past!"

"Well," he said, "I'm much obliged."

"Haven't *you* got any snapshots to show me? And yearbooks and things?"

He rubbed his fingers against the firm line of his jaw. "Nothing special. They'd bore you."

"Oh, no! No, they wouldn't!"

He shifted uneasily. "I don't even know where they are."

But at that moment Paula called him to the telephone and Mercedes came out of the house to take his place on the swing. The piece of bread was gone but some of the jam was on her face. She peered at Sally.

"Why," she demanded, "haven't you got any insinks?"

Sally smiled. "What are insinks?"

"I dunno. Paula says you haven't got any." She reflected, and launched carefully into a long word. "Any feminine insinks, Paula says."

Sally moistened her lips. "Instinct," she said. Her heart was pounding. She did not know what Mercedes was going to tell her, but her heart was pounding anyhow.

"Paula said the way you keep chasing my brother is the most awful thing she ever heard of," Mercedes went on, affably, "and Mother said it was because you came from Africa and didn't know any better. And Paula said, 'Oh, but my goodness! Wouldn't you think her insinks would tell her?' Mercedes paused, and looked at Sally in pleased curiosity. *"Why* haven't you got any insinks? Why *haven't* you?"

But Sally, not hearing the question, not looking at Mercedes, was gathering up her albums and stumbling down the steps of the porch. Then, even blind with tears, she was hurrying, in her clumsy coltish way, across the lawn.

AT THE dinner table, Septimus noticed that something was seriously wrong. Sally cut her meat and carefully buttered one of Trevor's hard little biscuits, but she ate scarcely anything. But because he was a man who could be as courteous to his own child as he would be to a stranger, Septimus refrained from asking questions. The confession came voluntarily after Trevor had retired to the kitchen, having brought in coffee for Septimus and candy mints for Sally. She had choked on the candy mint she was trying to nibble. In the next moment Septimus had come around to take her in his arms.

She could not tell him everything she had heard from Mercedes. It would have been too great a pain even to say the words.

Nor could she have explained, even to herself, that the feminine instinct, whose lack in her Paula had so greatly deplored, had been given no time for a gentle, gradual unfolding. Within the space of seconds it had been forced into full being, so impelling anl obvious that Sally looked back on her previous self in incredulous shame.

She could share the Whitneys' opinion of her conduct. But she had no words for this inner revolution and torment. She could only stammer out her intention to have nothing more to do with Tom Whitney, or with the other Whitneys, or with anyone else in Medville, even if she were to live in the town for a million years.

"Sally," he said, "everyone has to go through these things. Everyone has to learn. The person who has never been humiliated is the person who has never had the courage to face the world at all. Before you'll have learned something. You'll see! And you'll be big enough to be grateful for it!"

Yet, even as he spoke, he knew the utter hopelessness of trying to send experience down the channel of the years. She was giving him a bright little smile that did not deceive him in the least.

"Sure! I'm not really worried about it. I guess," she added, "I'll just go wash my hair."

With this touch of bravado she left him, and went quickly toward the stairs. There was nothing he could say to comfort her. There was nothing he could do. He sighed and went wearily into his study where he tried to throw himself into the mores of West Africa.

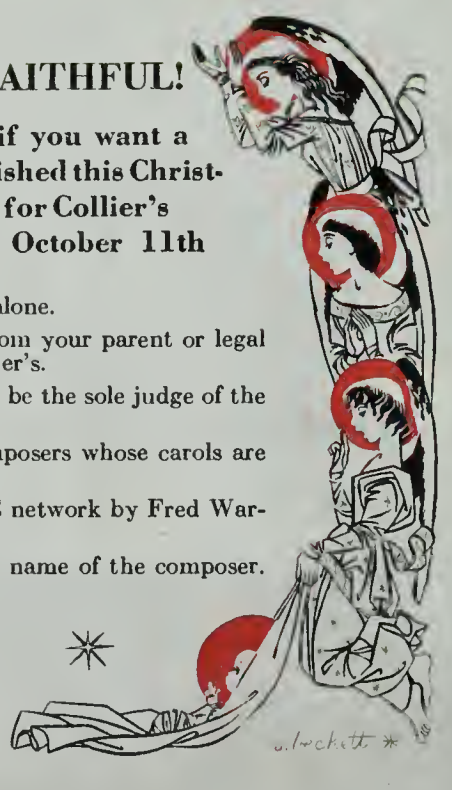
He began shaping up the second chapter of his book. It had mainly to do with certain difficulties he had encountered in Ashanti. There had been the natives who had balked at being photographed and the natives who had refused to answer any questions, and the natives *(Continued on page*

COME ALL YE YOUNG FAITHFUL!

If you are under 18 years old, if you want a chance to have your carol published this Christmas in Collier's, submit your carol for Collier's Second Annual Award before October 11th

RULES—1. The words and music must be yours alone.

2. Your work must be accompanied by a letter from your parent or legal guardian giving us permission to publish it in Collier's.



3. Fred Waring, leader of the Pennsylvanians, will be the sole judge of the eight best carols submitted.

4. Collier's will send $25 to each of the eight composers whose carols are selected.

5. Winning carols will be broadcast over the NBC network by Fred Waring's Glee Club and Orchestra.

6. Each piece we select will be copyrighted in the name of the composer.

Send your carol and letter of permission by October 11th to Collier's, Christmas Carol Department, 250 Park Avenue, New York 17, N. Y.
SO COME—JOYOUS AND TRIUMPHANT!

Nancy and Me

By ERNIE BUSHMILLER

Millions of newspaper readers laugh at Naney's anties but few know she was created in desperation. This is the first of a series about America's favorite comic strips

THE editors of Collier's and an innocent bystander whose name I didn't catch, browbeat me into drawing the ctures on this page between newsaper deadlines. There are a couple items I had to leave out about ancy and me, though, because when draw words in the strips I draw em large. Older people tell me this ves wear and tear on their eyeasses, and little kids who have just aggered through first grade tell me ey can often get the point of a ancy gag without bothering Pop to ell out the story.

It's funny about Nancy. When I arted comic-strip life 26 years ago, the age of eighteen, I thought some eesecake would do the trick, so I eated a character named Fritzi Ritz. Fritzi did all right but not well ough to suit me, and so, in someing like desperation, I experimented round with snub-nosed Nancy ten ears ago, and Nancy soon stole the ow.

I work on a schedule that produces x daily Nancy and Sluggo (her tough al) strips between Sunday and Tuesay evenings. The Sunday page olves after I've taken Wednesday d Thursday off. If this sounds conusing, then you have a fairly accurate cture of a newspaper cartoonist's e.

Unlike other strip cartoonists, I aw the last picture first and work ack toward the beginning, which is actly the opposite of the way you ad it (I hope).

I know a guy who draws his carons upside down, so I don't worry uch about drawing backwards.

Self-Portrait of an Artist

The fat, redheaded gent in the biophical strip at the right is supposed be me, although I gave myself a eak and left out the gray hairs. The aunch is a sort of compromise.

Other intelligence: Six months of gh school was all I could take. I arried (and am still married to) a gal amed Abby Bohnet. I still live in the ronx and am making a fabulous rtune. Otherwise, I'm just working r laughs.

The only other fact I can locate in y files at the moment is, I get some ther peculiar mail.

One letter was from a horse-race thusiast on the West Coast who mehow detects racing tips in the ancy strips. How he does it I don't ow and I'm not going to try to find t. I have trouble enough with ancy and her bangs without fooling ound with the bangtails.

Another letter was from a woman Brooklyn whose daughter wanted baby sister so she could name it ncy. Since the lady was about to oduce a brother or sister for the ughter, she hoped it would be a ster. But what, the woman asked e with considerable agitation, if it rned out to be a boy? She didn't nt to name the infant Sluggo.

P.S. The baby turned out to be a rl. ★★★

A PRINCESS SELLS HER *Sarong*

By Bill Davidson

Some women can wear sarongs and some can't—anyway shouldn't. But there's a Javanese Lana Turner who can wear them and sell them too. If you don't believe it study the opposite page

UP UNTIL a few months ago, the undisputed Queen of the Sarong and authority thereon (so far as the Western world was concerned) was Dorothy Lamour. On April 7th, however, a diminutive, golden-skinned, Cleopatra-faced, Lana Turner-bosomed Javanese princess named Malia Sunario Wiranata Kusuma set foot on American soil, and immediately thereafter Lamour's reputation with sarongs commenced to topple.

Like nearly all of her countrywomen, Princess Sunario wears sarongs. Unlike the scant Lamour garment, which terminates midway on the thigh, the princess' sarongs are evening-dress-length affairs. When asked about this disparity, the princess burst into gales of laughter and told her questioners that Dorothy Lamour's abbreviated sarongs are known in Indonesia as "sarong à l'Américain" and that Miss Lamour has become one of the great comedy stars in Indonesia merely by appearing in them.

"One should tell Miss Lamour," the princess politely added, "that Javanese women only wear sarongs in her fashion while working in the rice fields—or while taking a bath."

After loosing this salvo, the curvaceous daughter of the president of West Java continued on her official mission, which consisted of (a) demonstrating to the people of the United States that Indonesian women were charming, well-educated and happy under the Dutch; (b) studying American school and hospital methods for adoption, under her supervision, in Java; and (c) visiting such centers of culture as the M-G-M lot, the Yankee Stadium and Coney Island.

The sarong issue, however, was not allowed to fade from the public eye. The princess discreetly let it be known that she is a partner of a Batavia firm that is desirous of exporting sarongs to the United States. The influential trade paper, Women's Wear Daily, passed this intelligence along, and wherever the sarong-clad princess went, she was swamped with orders.

Genia D'Arsen, a Hollywood dress designer, compared the batik print dress she was wearing with the princess' sarongs, discarded her dress in disgust and ordered 16 of the real thing from Princess Sunario. Actress Jeanette MacDonald begged for a single sarong from the princess' own wardrobe. So did socialite Mrs. P. L. Jackson, wife of the publisher of the Portland (Oregon) Journal. The princess bestowed a bright, new red one on Mrs. Jackson. After several lessons in how to wind the sarong about her person, that lady wore it as a cocktail gown and forthwith became the sensation of the Portland social season.

Typical of the princess' reception in various parts of the country was her appearance before the San Francisco Junior Chamber of Commerce. She spoke about Indonesia and its political problems. Then she asked for questions. Question number one was: "Is Java near China?" Question number two was: "When can we get sarongs to sell?" At this, a Netherlands Trade Commission official mopped his brow and smilingly declared, "Madame Sunario has started a fad. Thousands of American women will soon be wearing sarongs as cocktail and evening gowns."

The royal sarong peddler, who speaks with a charming Dutch accent, is thirty-six years old and the mother of four children. She looks so much like a teen-age model for a South Seas travel poster that she causes confusion to nearly everyone she meets. In Hollywood, for instance, the following conversation was recorded between her and movie star Van Johnson:

Johnson: "Do you go to school here in America?"

Sunario: "No, I visit here. I have a daughter sixteen who goes to school."

(Embarrassed silence.)

The entry of this attractive female into the sarong business is one of the minor by-products of the war. Since, like most Javanese, she is a Moslem (a faith which frowns on any feminist activity), it is also a minor miracle. She was born in West Java, the second eldest of the 21 children of (Prince) Ario Adipati Wiranata Kusuma, a direct descendant of the Hindu kings that conquered and ruled West Java, after an amphibious campaign in 1433.

Because of the royal lineage, her father was regent of Bandung (the second largest city of West Java) under the Dutch, and the young princess led the life of the Indonesian nobility. She was educated by a wealthy Dutch family in Batavia, absorbed Indonesian and Moslem culture from her father, and got her higher education—including a good knowledge of German, English and French—at a Catholic convent school selected by her father.

After that, Prince Sunario, the handsome young police commissioner of Bandung, was selected to be her husband; and at the age of seventeen, she settled down to be a good Moslem wife and mother.

This placid existence was ended by the war. The princess was caught in the Japanese bombing of Bandung's biggest civilian hospital, and she worked there day and night as a Red Cross nurse caring for the wounded. During the oc cupation, she became the head o a federation of women's club which went off on treks into th mountains to teach the children o the people who had fled there afte the invasion.

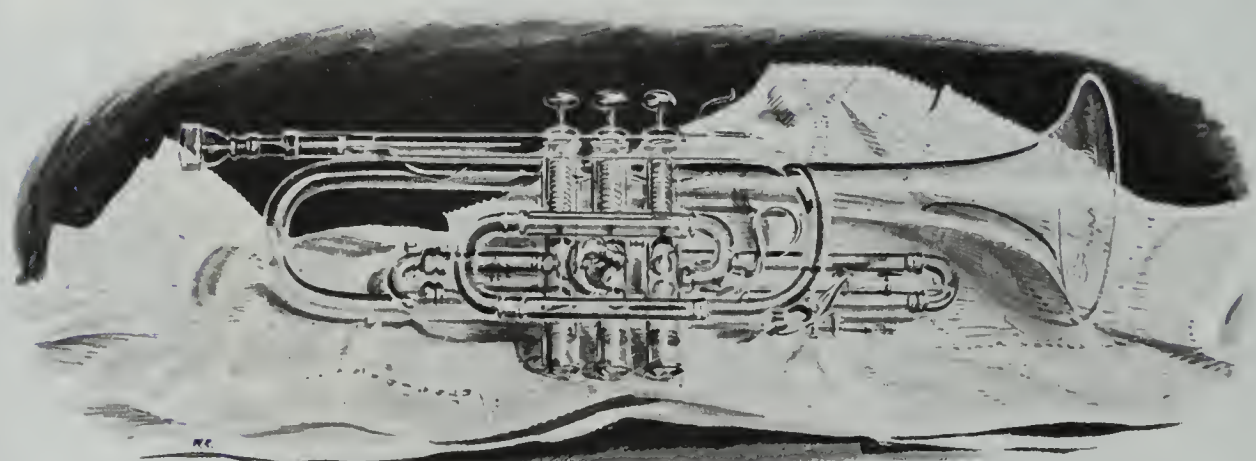
The civil war which followe liberation found her cut off fro her husband and virtually impri oned for six months in her hom in the Dutch quarter of Bandun She lived during this period b baking cakes and sending her serv ants into the streets to peddl them. Finally, a B-29 pilot brought her and he children to Batavia in a bomber.

But here, too, she faced the problem of makin a living. She solved this in a unique way. Ever day, republicans came into Batavia's railroad st tions laden with sugar and other food produc from the hinterland. They refused to sell thes products directly to the Dutch. The princes trusted by both sides, became their go-between operating on a bicycle, and for a percentage of th profits.

From this she expanded into another bicycle go between service whereby wealthy but starving In donesian ladies sold their jewels to Java's Chine merchants. Her unexpected business acumen i these matters so impressed the merchants that a affluent Chinese corporation took her in as a 45 pe cent partner, and set up a textile importing co poration called "Pembina." When her husban finally crossed the battle lines and found her, h nearly collapsed when he discovered not a famishe helpless female, but a prospering businesswoma well on the way to becoming Java's first saron magnate.

Princess Sunario's sarongs range from simp house-dress types to fancy gold-leaf wedding sa rongs over 100 years old. They range in price fro a few dollars to several thousand.

A sarong traditionally is a rectangle of speciall made cloth exactly 3½ yards long. Since it only co ers the female form from the waist to the ankle supplementary equipment generally consists of brassière and a tailored jacket known in Java a the "Kebaya" (Princess Sunario's *kebayas* are ex pensive Western-type garments made by Par *couturières).* For the curious, the most common desired form of undergarment worn with the sa rong is the American two-way-stretch girdle.



When Madame Sunario arrived in this countr she had some 60 regulation-size sarongs with he To the astonishment of observers, each of these wa folded to the dimensions of a man's necktie, an all 60 reposed comfortably in a small suitcas This, the princess explained, can be done with co ton fabrics finished in the ancient Indonesian bat methods. She further explained that such fabri are practically indestructible and are passed alon from mother to daughter. *(Continued on page 4*

PHOTOGRAPH FOR COLLIER'S BY PHILIPPE HALSMAN

The glass cornet

Ole Krosteson and Frankie were years apart in age, but they had two important things in common—a love of beauty, and faith in a dream

By KINGSLEY TUFTS

ILLUSTRATED BY WALTER RICHARDS

FRANKIE WILLIAMS' heart pounded for joy as he left Ole Krosteson's house and started for home. All his life, it seemed, he had wanted a cornet. But never before had he spoken of this desire. It had been one of the impossible things. Then tonight, suddenly, he had confided in his friend, Ole Krosteson, and Ole had promised a fabulous thing. He had promised to make a cornet of glass.

As Frankie left the neighborhood of the glass factory, following his shadow in the moonlight, he could hear the throb of the pumps in the oil fields half a mile beyond. The Williamses lived in the newest subdivision of town. Behind their street lay the open fields, bright with California poppies, and farther on, beyond the windbreak of eucalyptus trees, rose the oil derricks.

His father had worked in the oil fields a year. Sometimes Mr. Williams worked a split shift, other times at odd hours. And often his father was sleeping when Frankie wanted to blow his khaki Army bugle. At these times he would lay it across the handle bars of his bicycle and pedal out to the eucalyptus windbreak. Sometimes he crawled up on one of the hundreds of oil derricks and blew it there. As he thought of the glass cornet, he imagined himself on top of the tallest rig in the field, valving the scales, practicing to be the greatest cornet player on earth. He gritted his teeth for joy as the goose pimples prickled his arms.

He jerked open the front door, crying, "Guess what! Ole Krosteson is going to make me a glass cornet!"

His mother sat with one of Esther's stockings pulled over her hand. His father glanced up from the newspaper. His sister buried her nose deeper in her schoolbooks at the dining-room table.

His father grunted. "Glass cornet, eh? Ole must have changed bootleggers. His regular hooch isn't that strong."

"George!" Mrs. Williams said in a shocked voice. "Not in front of the children."

"Ah, Mom, I know Ole drinks," Frankie said. "But he wasn't drinking tonight."

"Who ever heard of a glass cornet!" Esther said scornfully.

"Gee whiz!" Frankie cried. "I've just been telling you."

"Look, son," Mr. Williams said seriously. "Krosteson was under the weather. He was pulling your leg. Even if he was able to make one, it would fly to pieces from vibration with the first toot. Don't believe everything anybody tells you."

"I think a glass horn would be nice," Frankie's mother said, "even if you couldn't blow it."

"Especially if you couldn't blow it," Esther added.

"Will you shut up! Ole is one of the greatest glass blowers in the world!" Frankie burst out. Then stoutly to his father: "He's going to make it out of a special kind of glass. It won't break."

Esther asked, "Did you tell him you can't go to San Pedro with him Sunday?"

Frankie's heart sank. A week ago Ole Krosteson had asked him to ride over to the harbor with him on Sunday and have a look at the ships. His father had forbidden it. He had been unable to bring himself to tell Ole he couldn't go. "We were talking about other things," he hedged.

"You mean you didn't tell him," his father said flatly.

"Oh, what difference does it make?" his mother asked. "Frankie can tell him tomorrow."

"I don't want Ole Krosteson sitting out front in that wooden-wheeled tin can on Sunday morning honking his horn when I want to sleep," George Williams growled.

"I only wish we had a tin can like that!" Esther said.

"Well," Mrs. Williams said, "we're not likely to —at least for a while yet."

Frankie looked at them. They didn't care about the cornet. And they didn't understand about his friend. To them, Ole was just an old gaffer at the glass factory. At the sideboard he unbuckled the belt from around his books, and slumped down across the table from his sister. He drew pictures of cornets around the margins of the pages in his history book. He made musical notes out of all the "o's" in the text. . . .

The next day, Saturday, he had two lawns to cut. It was not until late afternoon that he pedaled over to Krosteson's house. But the blinds were drawn, and Ole's car was gone from the garage. It occurred to him that Krosteson might have gone to Los Angeles, some twenty-five miles away, to get the special glass. He turned his bicycle toward the library to look up cornets again in the encyclopedia. He had read everything on cornets scores o

times, but now the articles had a new and burning importance. Twice in the evening he rode over to see if Krosteson had returned, only to find the house dark. There was nothing to do but wait for morning, and when Ole came by, tell him he couldn't go with him to San Pedro.

He was awakened by the honking of an auto horn. In the street a motor was being raced experimentally and quieted.

Mr. Williams was already in the living room pulling on his trousers as Frankie dashed for the door.

"You stay in here," his father said. "I'll talk to Krosteson."

"Why not let him go, George?" his mother said from the kitchen.

"He's not riding anywhere with anybody that drinks," Mr. Williams said sharply.

"Ole surely ought to be sober on a Sunday morning," she answered.

"We'll see," his father said, slamming the front door behind him.

FROM the window Frankie saw Ole Krosteson stiffen in the car, and sit very erect. He straightened his black derby and smoothed down his mustache as Mr. Williams approached. Frankie saw his father talking earnestly. Though acquainted, he and Krosteson were not friends.

"Let me go out!" Frankie begged his mother.

"Your father said no," she answered.

At last Frankie saw Ole reach down and release the emergency brake. He said something to Mr. Williams, and Frankie saw his father step back as smoke poured from the exhaust, and the car shot away from the curb.

"What did he say?" Frankie flung open the door.

"He had liquor on his breath," his father answered. "He didn't say much of anything."

"Was he going—anyway—without me?"

"You were talking about a cornet the other night," Mr. Williams said. "I noticed Krosteson had one on the seat with him. Silver one. Must have picked it up somewhere last night when he was plastered."

"What?" Frankie cried.

"Don't get excited," Mr. Williams said. "It wasn't a glass one."

Frankie looked at his father helplessly. Of course it wasn't. He would have bet anything in the world that Ole had got it in Los Angeles to use as a model for the glass one. Suddenly it came over him that his friend had been planning a great day for just the two of them, talking about the glass cornet, looking over the ships in the harbor.

"You sure fixed things!" he cried angrily.

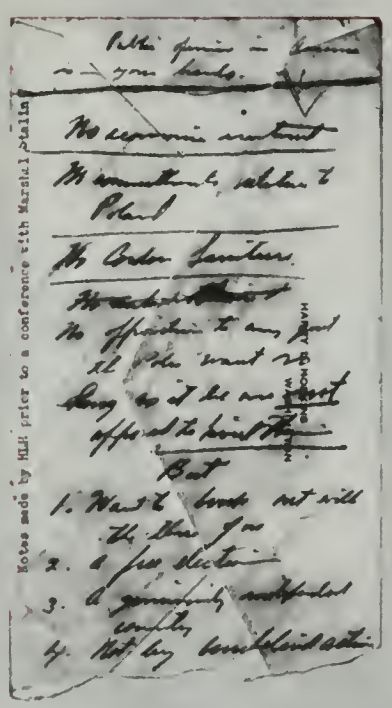
He felt his father's hand close tightly on his shoulder. "I know you wanted to go," he said, "but you'll be a lot better off in Sunday school." A friendly slap followed. "Don't take it so hard, son."

The rest of Sunday passed in agony. Frankie told himself he wouldn't blame Ole if he threw the whole thing over. He waited until after supper, then pedaled over to Krosteson's house. He had to explain that his father didn't understand—that he took the wrong attitude about some things. But everything was dark. He waited on the porch until nine o'clock. Finally, when Ole didn't come, he gave up, and went slowly home.

The next afternoon he ditched school and hurried to the glass factory. He walked swiftly down the planked floor past the first six blowing platforms, past the glass furnace, and toward the second battery of blowing holes on the other side. No matter how many times he came here, the heat and clatter of iron, the shouts of the men, the fiery glow and crystal brilliance of the great cylinders of glass were still exciting and terrifying.

Ole was out on the platform of the "big hole" leaning back, bracing his body against the weight of an almost completed triple-strength roller. The twenty-six-pound iron blowpipe whirled in his hands as he sighted down the length of the glass cylinder. His muscles strained beneath the sweat-soaked undershirt as he stood, legs spread, pressing his lips to the bee-bee of the pipe for the last blow. Covering the bee-bee with his thumb, he completed the full arc of the cylinder in the pit, swinging the seven-foot, sixty-pound roller up to the glory hole, catching the spinning pipe in the guide.

There was a little puff as the expansion of the imprisoned air inside the roller blew a hole in the soft glass. The edges began *(Continued on page 68)*



But most conspicuous of all was the silver cornet, suspended by two strings in the breakfast nook. It hung evenly, just above Krosteson's eyes when he was seated. "Oh—what a beauty!" Frankie exclaimed. Ole nodded. "The best"

SOVFOTO

Homeward bound, Harry Hopkins and his wife found Soviet hospitality in Berlin "almost embarrassing." They were shown all the Nazi sanctums including the Reichstag

Public opinion in America is in your hands.
No economic interest
No commitments relative to Poland
No *cordon sanitaire*
No opposition to any government the Poles want so long as it be one *not* opposed to Soviet Union

But
1. Want to work out with the three of us
2. A free election
3. A genuinely independent country
4. Not by unilateral action

Before meeting Stalin, Hopkins jotted down on an envelope the points he must watch out for in discussing Poland. President Truman and the State Department had briefed him as to where he could give way, where he must stand firm

The Secret Papers of HARRY L. HOPKINS

By ROBERT E. SHERWOOD

Hopkins staves off the gods of war and death in one final, desperate "Battle of Moscow." For the last timc, the growing misunderstanding between the Soviet and the West seems to be completely bridged

Part 17: Last Mission to Moscow

Conclusion

IN HIS first talks with President Truman after Roosevelt's death, Hopkins said that he would remain in Washington for a few weeks and make available to the new Chief Executive every scrap of knowledge that he possessed concerning Roosevelt's unrecorded plans and hopes and apprehensions for the future—and there was, of course, a considerable amount of knowledge that only he possessed. Truman wanted Hopkins to stay on to give him the same kind of advice and counsel and assistance that he had given the late President. But Hopkins was obviously at the end of his physical rope and he could not make even a pretense of holding any official position.

Just before the San Francisco Conference Hopkins wrote a personal memorandum, inspired by an "inside" story in Drew Pearson's column in the Washington Post on April 22, 1945. Pearson had written:

"Though it may get official denial the real fact is that American advance patrols on Friday, April 13th, one day after President Roosevelt's death, were in Potsdam, which is to Berlin what the Bronx is to New York City," but "the next day withdrew from the Berlin suburbs to the River Elbe about 50 miles south. This withdrawal was ordered largely because of a previous agreement with the Russians that they were to occupy Berlin and because of their insistence that the agreement be kept." Pearson stated that this agreement had been made at Yalta. Hopkins indignantly wrote:

"This story by Drew Pearson is absolutely untrue. There was no agreement made at Yalta whatever that the Russians should enter Berlin first. Indeed, there was no discussion of that whatever. The Chiefs of Staff had agreed with the Russian Chiefs of Staff and Stalin on the general strategy which was that both of us were going to push as hard as we could.

"It is equally untrue that General Bradley paused on the Elbe River at the request of the Russians so that the Russians could br through to Berlin first. Bradley did get a vision well out towards Potsdam but it outreached itself; supplies were totally in equate and anyone who knows anyth about it knows that we would have taken B lin had we been able to do so. This wo have been a great feather in the Army's c but for Drew Pearson now to say that President agreed that the Russians were take Berlin is utter nonsense."

On May 1st the Hamburg radio decla that Adolf Hitler was dead. On May 2d Russians captured Berlin and hostilities Italy ended officially.

On May 4th, all German forces in Netherlands, northwest Germany and D mark surrendered to Field Marshal M gomery's 21st Army group.

On that day Hopkins received the follow telegram from Eden, Molotov and Stetti in San Francisco: "At a dinner last night three drank a special toast to you in sin recognition of the outstanding part you sonally have played in bringing our t countries together in the common cause. regret that you are not with us at this mom of victory. With our affectionate pers regards."

On May 8th (V-E Day), Hopkins ca Churchill, "I want you to know that I h been thinking of you very much today," Churchill replied, "Your message reached while I was sending one to you. Among those in the grand alliance, warriors or sta men who struck deadly blows at the en and brought peace nearer, you will ever h an honored place." With these and other comiums to cover the many scars that he received, Hopkins felt that he could now tire forever from public life.

However, less than a week after V-E I it seemed that the San Francisco Confer was going on the rocks. Molotov and E were both headed for home. Harriman Bohlen were on an airplane flying across Continent with a *(Continued on page 7)*

A thought to take inside

WE'VE PUT these four red roses outside your favorite bar to remind you how to get the very finest highball or cocktail you ever tasted.

When you go inside, just say to the barman, "Make mine with Four Roses, please."

You'll discover, at the very first sip, why more people are asking for Four Roses today than ever before in the 60-year history of this illustrious whiskey.

The reason is simply this: no other whiskey, however fine, combines quite the mellow smoothness and distinctive flavor that has won so many friends for Four Roses.

Try it and see!

. . .

Fine Blended Whiskey—90.5 proof. 40% straight whiskies; 60% grain neutral spirits.

Frankfort Distillers Corporation, New York.

FOUR ROSES

AMERICA'S MOST FAMOUS BOUQUET

The bright-eyed mouse at the right spells hope to doctors and parents. He and the paralyzed mouse at the left received identical injections of a polio virus. But the healthy mouse also received Darvisul, a drug which may lead to victory over polio. Holding the mice is patient technician Fritz Popken

Has Polio Met Its Match?

By J. D. RATCLIFF

The import of Darvisul's discovery may easily be misunderstood. It cannot yet be regarded as a successful treatment for polio. The new drug is available in limited quantities to physicians qualified to use it, but no one can be certain how effective it will be in practical use. It is still too early in the game. Here Collier's presents the dramatic story of the latest polio research.

At last—Darvisul, a new drug in the fight against polio and other virus diseases. It may open the way to more successful treatment of a deadly host of infections — influenza, sleeping sickness, yellow fever, rabies and colds

SULFA, penicillin and streptomycin have written a brilliant record as conquerors of bacterial disease, but they leave almost untouched another great class of microbes: the viruses. These are the submicroscopic bits of violence which cause such illnesses as sleeping sickness, yellow fever, infantile paralysis, colds, influenza, rabies. With no drugs to touch them, the viruses have remained one of medicine's greatest pieces of unfinished business.

There is now evidence that this unfinished business may be on the way toward great results. A new drug seems to have cracked the virus defense and, in doing so, becomes the greatest medical news since the discovery of penicillin. *Potentially* the new drug opens the way for a pill which will conquer the common cold in the dramatic fashion that sulfa combats pneumonia. It opens the way to a drug which will stamp out wildfire flu epidemics. Of more immediate importance, the new drug opens a new field for specific treatment against the most terrifying of all diseases: infantile paralysis.

By now, over 100 children sick with polio have had this drug. In a heartening proportion of cases, fever—which marks the grim progress of the disease—has disappeared in less than 24 hours. In many cases, spinal fluid, often cloudy with castoff cells destroyed by the disease, has cleared. If drug has been administered early enough and proper doses, the progress of paralysis *appare* has been stopped in its tracks.

In a series of 60 cases treated by one physici there was but one death. This case arrived at hospital late, and polio had attacked certain po in the critical bulbar area where the spinal c joins the brain. This area controls breathing, he beat and other vital functions. When it is inju respiratory failure—and death—follow. These complishments of the new drug are more impres when it is remembered that, up to now, no d has been effective on the devastating polio virus.

The story of this research achievement begin the pretty little town of Pearl River, New Yor up the Hudson from New York City, and b inland toward the rolling hills of Rockland Cou This is the home of the Lederle Laboratories, m ers of pharmaceutical products.

A year ago last April, the late Dr. Y. SubbaR India-born, Harvard-educated director of Led Research—and one of the foremost biochemist the world—faced up to the virus problem. All tacks on virus had been done in piecemeal fash No one had ever undertaken an all-over frontal tack in the quest for drugs *(Continued on page*

The Human Female

By COREY FORD

Women can take furniture but they can't leave it alone, aceording to our authority on the foibles of females. This is the first of a series of revelations which will prove to be no news to human males

IN PREPARING the Collier's Report on the Social Behavior of the Human Female, our special investigator secured the names and addresses of 492 married women, or wives, which he entered in a small pocket notebook. This notebook was found in his pocket that night by his own wife. The *next* special investigator that we hired interviewed the husbands instead.

These husbands were assured that their reports would be treated with the utmost confidence, and consequently they were only too glad to talk. Some of them said it was the first chance they'd had in years. The interviews thus secured were placed in a pile and held up to a strong light, as a result of which it was possible for the first time to observe a complete pattern of the human female. By moving these papers up and down in a circular motion, moreover, the pattern could be made to do some very unusual things, and we would be glad to show you any time you want to drop around to the office. Ask for Harry.

To be sure, the Collier's Report makes no effort to explain *why* the human female behaves as she does. (Cf. The World's Greatest Mysteries, Vols. I-IX, incl.) All we have attempted in this survey is to list certain behavior characteristics typical of all women, such as a total inability to put a Sunday newspaper back together again the way she found it, an instinctive distrust of all road maps ("I don't care what it says, George, I know we turn off here") and a tendency to drop both gloves under the table whenever she sits down. The husband's behavior pattern, on the other hand, is always the same, i.e., murmuring resignedly, "Yes, dear," and getting down on his hands and knees to look for the gloves.

Probably the most universal characteristic of the human female, according to our survey, is the habit of shifting or rearranging furniture. Out of 492 married males interviewed by our special investigator, only one husband, a Mr. B—, stated that the furniture in his home had remained in the same place ever since he was married. (He admitted later that he had secured all the chairs to the floor with twentypenny spikes.) From our file of case histories on the subject, we offer the following experiences as typical:

Case No. 98: Mr. J—, who has been married 20 years and says it seems like 20, claims that his wife has shifted the furniture in their home 347 times, to his certain knowledge. "The trouble with my wife," he says, "she can't take furniture and leave it alone. It's a vice with her, like opium. A love seat is a challenge. A bridge table is a gauntlet flung in her face. A sofa will be in one place in the morning and somewhere else at night, until it's as much as your life is worth to cross the living room in the dark, let alone sink back into your favorite easy chair without feeling behind you first to see if it's still there.

"Once she pulled the chair right out from under me as I was sitting down," he stated, rubbing the back of his head reminiscently. All day long, Mr. J— said, chairs and tables would keep moving past him in a steady stream, and at night he'd be kept awake by the rumble of furniture being shifted from one end of the house to the other, usually by Mr. J—.

He has finally solved the problem by sleeping every night in the display window of a local furniture store. It gives him a feeling of peace and security, he says. At least they change the exhibit only once a week.

Case No. 247: Mr. McQ—, who is married to a Mrs. McQ—, had a red leather armchair which he always kept on the right-hand side of the fireplace, and from which he had learned to flip cigarette butts past the andirons without even looking up. One night when he got back from the office, he told our investigator, he discovered that his wife had shifted the armchair over to the left-hand side of the fireplace. Mr. McQ— set about learning to flip his cigarette butts from the left-hand side, and he had just about mastered the technique when he came home one night and found that his wife had shifted the armchair back to the right-hand side again.

Mr. McQ— took one look, put his hat back on, went downtown and bought another red leather armchair exactly like the first. He placed one armchair on the left-hand side of the fireplace, and the other armchair on the right-hand side of the fireplace. Now his wife can spend all day long shifting the two chairs back and forth, and Mr. McQ— isn't bothered a bit. He's even learned to sit in his chair while his wife pushes it back and forth, and flip his cigarette butts into the fireplace as he goes by.

Case No. 27: Mr. K— states th wife doesn't so much rearrange fu as exchange it for *other* furniture, for some reason always turns ou a little less comfortable. Ever si has been married, Mr. K— sai furniture has been moving in one d his house, and old furniture ha moving out the other door, and h has been standing in the middle t her teeth with her knuckles.

"That's the danger signal," M warned our investigator, "when a w starts to tap her teeth with her kn and gets that faraway look in he 'Look, dear,' she'll say 'do you rea that new curly maple set?' 'Of c like it,' I'll say. 'Why wouldn't I after I've just finished paying f

'Because I was just thinking,' she'll doesn't really go with that colon der-back chair that Aunt Harri gave us—'

"So then the whole thing will s over again, and just about the ti get our living room done over i American antiques, my wife wi up a Chinese teakwood table auction someplace, and she'll tapping her teeth with her k again, and that is why I'm living o in the barn, with the horse."

It is hoped that these few case h have served to illustrate the fu rearranging aspect of human fem havior. There were a lot of oth histories, but I can't seem to locat right now. It seems I've just rea the furniture in my office.

Inside Sports

Collier's SPORTS

By BILL FAY

Johnny Sain's success story began in the Navy, when he practiced what others pitched. Now he relaxes between games, hoping for 20 or more wins for the third straight year

Left to right: Sain, Phil Masi, catcher, Tommy Holmes, outfielder, and Mike McCormick, outfielder

THE Boston Braves were in Chicago. Johnny Sain, the big right-handed pitcher, was dozing in a beach chair on the hotel veranda. The breeze from Lake Michigan was cool.

"Now there's a man who insists on being comfortable," first baseman Earl Torgeson remarked. "Look for the softest chair and the most shade and you'll find Sain. You know, he bought a car last fall. Tried out half a dozen models and finally took the car he could slide into without knocking his hat off."

Sain sat up. "Run along, rookie," he advised Torgeson. "Buy yourself a cigar."

After Torgeson left, Sain said, "That kid is quite a ribber. I remember when he joined the club down in Florida two springs ago. He'd sit beside me after practice and say, 'Gosh, Johnny, it sure is a thrill to be playing ball with you big stars,' and we'd get talking, and pretty soon I'd say, 'Here, kid, have a cigar.' Well, I'd passed out a lot of cigars before I discovered the kid was just playing me for cigars. But I got even. Went over to Tampa and had some 'Torgeson Specials' made up. Pretty awful. Must have been half rubber. I fed a couple of them to Torgie—and he hasn't bummed another cigar since."

Johnny looked out over the water for a moment. "Funny business, baseball. I should never have got into it, and if I'd had any sense I would have quit a long time ago. But here I am on a pennant contender. Know where I started? The North East Arkansas League in 1936. Played four straight years and never got more'n a couple hundred miles from my home town, Belleville. Salary wasn't much. Fifty a month the first two years and seventy-five a month the last two.

"Had a fair curve but no fast ball. The scouts never talked to me. They were looking for kids with a live fast ball. Guess I should have quit when the Detroit Tigers made me a free agent in 1940. Instead, I went down to the Nashville training camp at my own expense and made the team as a relie pitcher.

"Pitched two years for Nashville without show ing much. Larry Gilbert, the manager, planned t put me on first base in 1942, but the draft took a lot of his men, and he said I'd have to keep on pitch ing relief. Turned out that was a break, becaus the Braves were looking for a relief pitcher. The trained with Nashville that spring, and Larry aske Casey Stengel to look me over. Casey said m curve might get by and he bought me for $6,000— not a very flattering sum.

"Pitched fair ball for the Braves in '42, but th other clubs labeled me a five-inning pitcher becaus I was knocked out the few times I started. Wen into Navy flight training in '43 and that shoul have finished me as a ballplayer, but I got anothe break. Was assigned to Chapel Hill and got a chance to play with Ted Williams and Johnn Pesky. I was a test pilot and instructor for thre years.

"Played enough ball to let me experiment o pitches I'd seen other fellows use effectively—lik Brazle's sidearm sinker. Sometimes I worked in th outfield and threw as far and as hard as I could That loosened my shoulder and put a little extra o my fast ball. When I went back to the Braves i '46, I was throwing overhand and sidearm an underhand.

"First time Masi warmed me up, Southwort asked, 'What's Sain got?' and Phil said, 'Not muc of anything and a little bit of everything.' Wel Southworth gave me a chance to start, and I wor and I kept on experimenting and won some more Some smart baseball people say pitchers shouldn experiment with new stuff. That's all right fo fellows with natural stuff—like Simmons of th Phils or this young Johnny Antonelli we bought las month—but I have to keep fooling the hitters wit something different. Right now I'm trying to lear the knuckler—it's the toughest pitch to hit.

"Well, that's the story—look at the time—11:3 —time to start for the park—"

Sain is that rarity among modern pitchers—a 2 game winner. Johnny captured 20 victories in 194 and 21 last season. Since 1920, only five Nationa Leaguers have won 20 games three straight year Another 20-game harvest this season would mov Johnny into the select group with Wilbur Coope Dizzy Dean, Carl Hubbell, Paul Derringer an Mort Cooper. Christy Mathewson threw 12 cor secutive 20-game seasons for the Giants from 190 to 1914—averaged 27 triumphs per season—bu that was before the home-run baseball was invente

country. However, a friend supplied some background information.

Aitken is a big fellow—six feet three inches and 200 pounds. About forty. A ceramics artist who has done glazed and baked sculptures. His "Hitch Hiker" (a nymph riding piggyback on a centaur) is on exhibition in the Whitney Museum. He is wealthy, plays polo, fences, skis, flies racing planes (of his own design). He's taught gunnery to some 38,000 Army pilots at Yuma.

As Robinson claimed, Aitken is versatile. But what about his big-game hunting? We finally reached Russ a few weeks ago. He was back in New York and resting in LeRoy Sanitarium.

"Just a sore back," he explained.

"How was the trip?"

"Splendid. Traveled about 2,000 miles in a safari car—sort of a Rube Goldberg contraption—and walked another 300. Lost about 25 pounds."

"Any luck?"

"One elephant. Passed up 60 before we came across the one I wanted. Those African bull elephants are tremendous. They make the little Indian fellows you see in the circus seem puny by comparison. Got a lion, too."

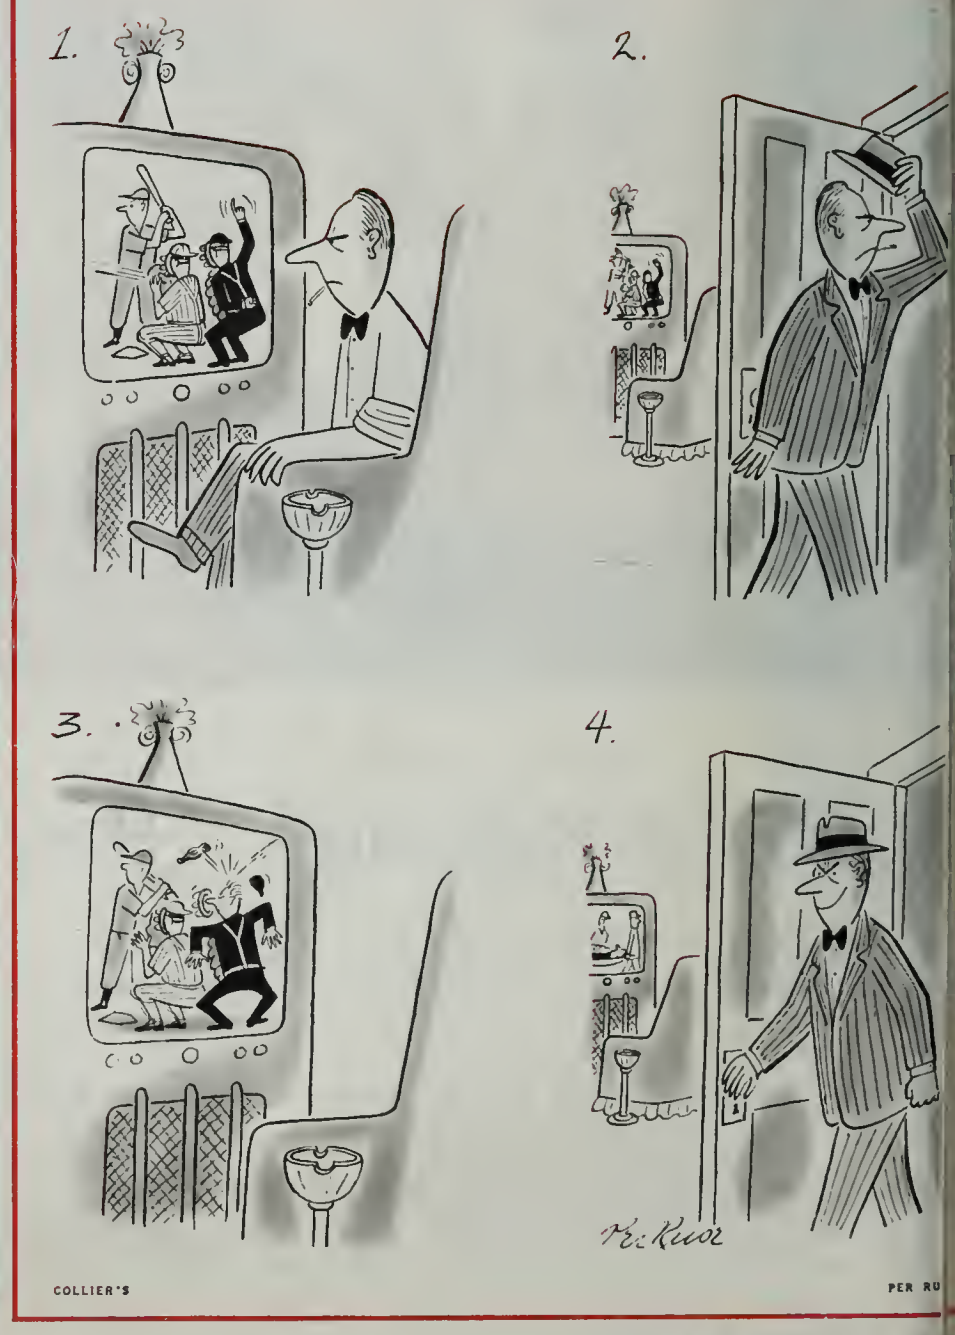
"How'd you hurt your back?"

Well, that was a long story. Essentially, here's what happened. Versatile Russ is an expert photographer, too . . . He develops his own prints at home. While washing a print of that African bull elephant, Russ bent over the bath tub—and threw his sacroiliac out of whack.

NO LAUGHING MATTER

Miss Rebecca West, the British writer, doesn't agree with Hollywood directors who cast sports reporters as happy-go-lucky, hat-on-head characters. After visiting press row at the Ike Williams-Beau Jack fight, Miss West commen "Sports writers are the gravest lool men I know. Compared with them House of Lords is a raffish bunch, thc maybe our ecclesiastical confere presided over by the Archbishop of C terbury match them in solemnity."

If Miss West thinks fight writers solemn, she should meet the Chic baseball scribes who watch the W Sox play 154 games each season. T are a reasonably solemn facsimile of Archbishop of Canterbury.



CAMPAIGN SONGS

Football songs featured the Repu can political pep rally at Philadel Governor Dewey and Senator Van berg used the fight song of their na Michigan. Senator Taft's band boo Ohio State's. At the Democratic vention, President Truman stuck to Missouri Waltz, but he may switc something livelier for the campaign If Harry's looking for a college numb match Dewey's militant Michigan ody, he could do worse than adopt rousing Columbia tune that be "Roar, Lion, Roar!" Be a nice ges too. The fellow who runs Columbia done a lot for Harry.

HOGAN'S BAD DAY

Confirmed bogey shooters may comforted by what happened to Hogan on a 140-yard par-3 hole at J sonville, Florida, last year. Ben dro his tee shot into a pond and wasted swings trying to play out of the w He took a penalty stroke, dropped ball on dry land, and chipped back to the pond. Another penalty strok chip onto the green, two putts . . . Ben was down in 11!

THE END

THE SECRET PAPERS OF HARRY L. HOPKINS

Continued from page 28

sense of despair in their hearts. Bohlen suggested that Truman might send Hopkins to Moscow to talk things out directly with Stalin and Molotov. Harriman was enthusiastic about the suggestion and, on his arrival in Washington, went immediately with Bohlen to see Hopkins in his Georgetown house. Both Bohlen and Harriman have told me that Hopkins' response was wonderful to behold. Although he appeared too ill even to get out of bed and walk across N Street, the mere intimation of a flight to Moscow converted him into the traditional old fire horse at the sound of the alarm.

Harriman then went to the White House and presented the suggestion to the President.

Several anxious days followed. Then Truman sent for Hopkins and asked him if he felt capable of making the long journey; Hopkins' reply was an immediate, enthusiastic affirmative.

A SESSION IN THE KREMLIN

He left Washington on May 23d, less than two weeks after his retirement from government service. On this trip, he was accompanied by his wife, and also by Harriman and Bohlen. They arrived in Moscow on the evening of May 25th. The first meeting in the Kremlin was at 8:00 P.M. on May 26th. Those present were Stalin, Molotov and Pavlov, and Hopkins, Harriman and Bohlen. They chatted for some time, recalling previous meetings, and speaking of President Roosevelt's death. Then Hopkins got down to business. The conversation follows:

Mr. Hopkins said that . . . there were a number of things that he and Mr. Harriman hoped to discuss with Marshal Stalin and Mr. Molotov, but before going into those specific questions he wished to tell the marshal of the real reason why the President had asked him to come, and that was the question of the fundamental relationship between the United States and the Soviet Union. Two months ago there had been overwhelming sympathy among the American people for the Soviet Union and complete support for President Roosevelt's policies which the marshal knew so well. . . . The American people at that time hoped and confidently believed that the two countries could work together in peace as well as they had in war.

Mr. Hopkins said there had always been a small minority, the Hearsts and the McCormicks, who had been against the policy of co-operation with the Soviet Union. . . . He said he did not intend to discuss this minority but to discuss the present attitude of the millions of Americans who had supported President Roosevelt's policy in regard to the Soviet Union and who believed that despite different political and economic ideology, the United States and the Soviet Union could work together to bring about a secure peace for humanity.

He said he wished to assure the marshal with all the earnestness at his command that this body of American public opinion who had been the constant support of the Roosevelt policies were seriously disturbed about their relations with Russia.

In fact, in the last six weeks deterioration of public opinion had been so serious as to affect adversely the relations between our two countries. . . .

Mr. Hopkins said that it was not simple or easy to put a finger on the precise reasons for this deterioration but he must emphasize that without support of public opinion it would be very difficult for President Truman to carry forward President Roosevelt's policy.

He said that, as the marshal was aware, the cardinal basis of President Roosevelt's policy which the American people had fully supported had been the concept that the interests of the United States were world-wide and not confined to North and South America and the Pacific Ocean and it was this concept that had led to the many conferences concerning the peace of the world which President Roosevelt had had with Marshal Stalin. President Roosevelt had believed that the Soviet Union had likewise world-wide interests and that the two countries could work out together any political or economic considerations at issue between them. . . .

He said in a country like ours public opinion is affected by specific incidents and in this case the deterioration in public opinion . . . had been centered in our inability to carry into effect the Yalta Agreement on Poland.

Marshal Stalin replied that the reason for the failure on the Polish question was that the Soviet Union desired to have a friendly Poland, but that Great Britain wanted to revive the system of cordon sanitaire on the Soviet borders.

Mr. Hopkins replied that neither the government nor the people of the United States had any such intention. . . .

Marshal Stalin replied if that be so we can easily come to terms in regard to Poland.

Mr. Hopkins said that he had in mind the other following questions to discuss with Marshal Stalin. (1) The desire of President Truman to meet Marshal Stalin in order to discuss all of the problems arising out of the end of war in Europe and the time and place of such a meeting.

Marshal Stalin said that he had already replied to President Truman concerning the place of meeting and he had suggested the region of Berlin. . . .

Mr. Hopkins said the second question he desired to discuss was the setting up of the Control Council for Germany. General Eisenhower had already been appointed the American representative on the Control Council and he hoped that at an early date the Soviet representative would be named so that the council could meet and get to work.

ZHUKOV IS CHOSEN

Marshal Stalin apparently had not heard of the appointment of General Eisenhower and stated that Marshal Zhukov would be appointed the Soviet representative on the Control Council for Germany. . . .

Mr. Hopkins said the third question he wished to discuss was that of the Pacific war and the future relations of the United States and Soviet Union to China. He said that . . . it would be most useful to the American military authorities if he could take back some idea of the approximate date of the entry of the Soviet Union into the war in the Pacific.

Marshal Stalin said he would discuss that question with his advisers and let Mr. Hopkins know.

Mr. Hopkins concluded that . . . if Marshal Stalin for his part had any political questions concerning the United States which were worrying him he would of course be glad to discuss them.

Marshal Stalin replied that they had in fact several disturbing questions in regard to the United States. He added that he was very glad that the President had sent Mr. Hopkins to Moscow and

everybody's cheering for "B.V.D." BRAND

as given him this opportunity to ex-
re all these questions. . . .
The meeting ended with Stalin ex-
ssing his conviction that Hitler was
t dead, but had escaped by submarine.
The second meeting, involving the
e six participants as the first, was held
the Kremlin at 8:00 P.M. on May 27th.
llowing is the record of this meeting:
Mr. Hopkins said that last night the
rshal had indicated that there were
number of questions concerning the
ited States which were worrying him.
asked if Marshal Stalin would care
begin with these questions.

WHY STALIN WAS WORRIED

Marshal Stalin said he would not at-
pt to use Soviet public opinion as a
een but would speak of the feeling
t had been created in Soviet govern-
ntal circles as a result of recent moves
the part of the United States govern-
nt. . . . It was their impression that
American attitude toward the Soviet
ion had perceptibly cooled since it
ame obvious that Germany was de-
ted, and that it was as though the
ericans were saying that the Rus-
s were no longer needed. He said
would give the following examples:
1) The case of Argentina and the in-
tion to the San Francisco Confer-
e. At Yalta it had been agreed that
y those states which had declared
r on Germany before the first of
rch would be invited but at San
ncisco this decision had been over-
ned. . . . He added that the action of
conference and the attitude of the
ited States had raised the question
the value of agreements between the
ee major powers if their decisions
ld be overturned by the votes of such
ntries as Honduras and Puerto Rico.
2) The question of the Reparations
mmission. At Yalta it had been agreed
t the three powers would sit on this
mission in Moscow and subsequently
United States government had in-
ed that France be represented on the
e basis as the Soviet Union. . . . To
empt to place France on the same
ting as the Soviet Union looked like
attempt to humiliate the Russians.
3) The attitude of the United States
ernment toward the Polish question.
said that at Yalta it had been agreed
the existing government was to be
onstructed and that anyone with com-
n sense could see that this meant that
present government was to form the
is of the new. He said no other un-
standing of the Yalta Agreement was
ssible. Despite the fact that they were
ple people the Russians should not he
arded as fools, which was a mistake
West frequently made . . . that their
fience has its limits.

(4) The manner in which Lend-Lease had been curtailed. He said that if the United States was unable to supply the Soviet Union further under Lend-Lease, that was one thing, but that the manner in which it had been done had been unfortunate and even brutal. For example, certain ships had been unloaded and while it was true that this order had been canceled the whole manner in which it had been done had caused concern to the Soviet government. If the refusal to continue Lend-Lease was designed as pressure on the Russians in order to soften them up then it was a fundamental mistake. He said he must tell Mr. Hopkins frankly that if the Russians were approached frankly on a friendly basis much could he done but that reprisals in any form would bring about the exact opposite effect.

(5) The disposition of the German navy and merchant fleet which surrendered to the Allies. Stalin said that . . . under the surrender terms German troops were supposed to surrender to the army against which they had fought. He said General Eisenhower had correctly turned over to the Soviet command in Czechoslovakia some 135,000 German troops who had tried to surrender to the American Army. . . . However, as regards to the German fleet which had caused so much damage to Leningrad and other Soviet ports not one had been turned over to the Russians despite the fact the fleet had surrendered. He added that he had sent a message to the President and Prime Minister suggesting that at least one third of the German navy and merchant marine thus surrendered he turned over to the Soviet Union. . . . He said that the Soviet government had certain information leading it to believe that both the United States and England intended to reject the Soviet request and he must say that if this turned out to be true it would be very unpleasant.

Mr. Hopkins said he first of all wished to express his appreciation of the frankness with which Marshal Stalin had exposed his worries. He said that in so far as he and Ambassador Harriman were able they would answer equally frankly. . . . He was able to state that the United States had no desire to retain any portion of the German fleet and merely wished to examine the vessels for possible new inventions or improvements. After that we were prepared to sink the share turned over to us. He said that he had always understood that the fleet was to he divided between the United States. the Soviet Union and Great Britain and that in so far as the United States was concerned there was no objection to whatever disposition the Soviet government wished to make with its share.

Mr. Hopkins then said on the subject of Lend-Lease he thought it had been clear to the Soviet Union that the end of the war with Germany would necessitate a reconsideration of the old program of Lend-Lease to the Soviet Union.

Marshal Stalin said that was entirely understandable. . . .

Mr. Hopkins stated that even prior to the end of the war in Europe we had made an agreement with the Soviet Union known as Annex 3 to Protocol I, which involved delivery of supplies which might be of use in the Far East. . . . He emphasized that this commitment was accepted in full by the United States and we were in the process of carrying it out.

In regard to the unloading of the ships, he said that . . . it had been the action of one government agency involved in Lend-Lease and that it had been countermanded promptly within 24 hours. He said that no one who was responsible for Lend-Lease policy or American government policy had had anything to do with that mistaken order. The only question which had to be reconsidered was the program of deliveries . . . based on the needs of the war against Germany and that it had been made clear that on the hasis of this reconsideration we would be glad to reconsider any Soviet requests and that he thought some were now being considered. . . .

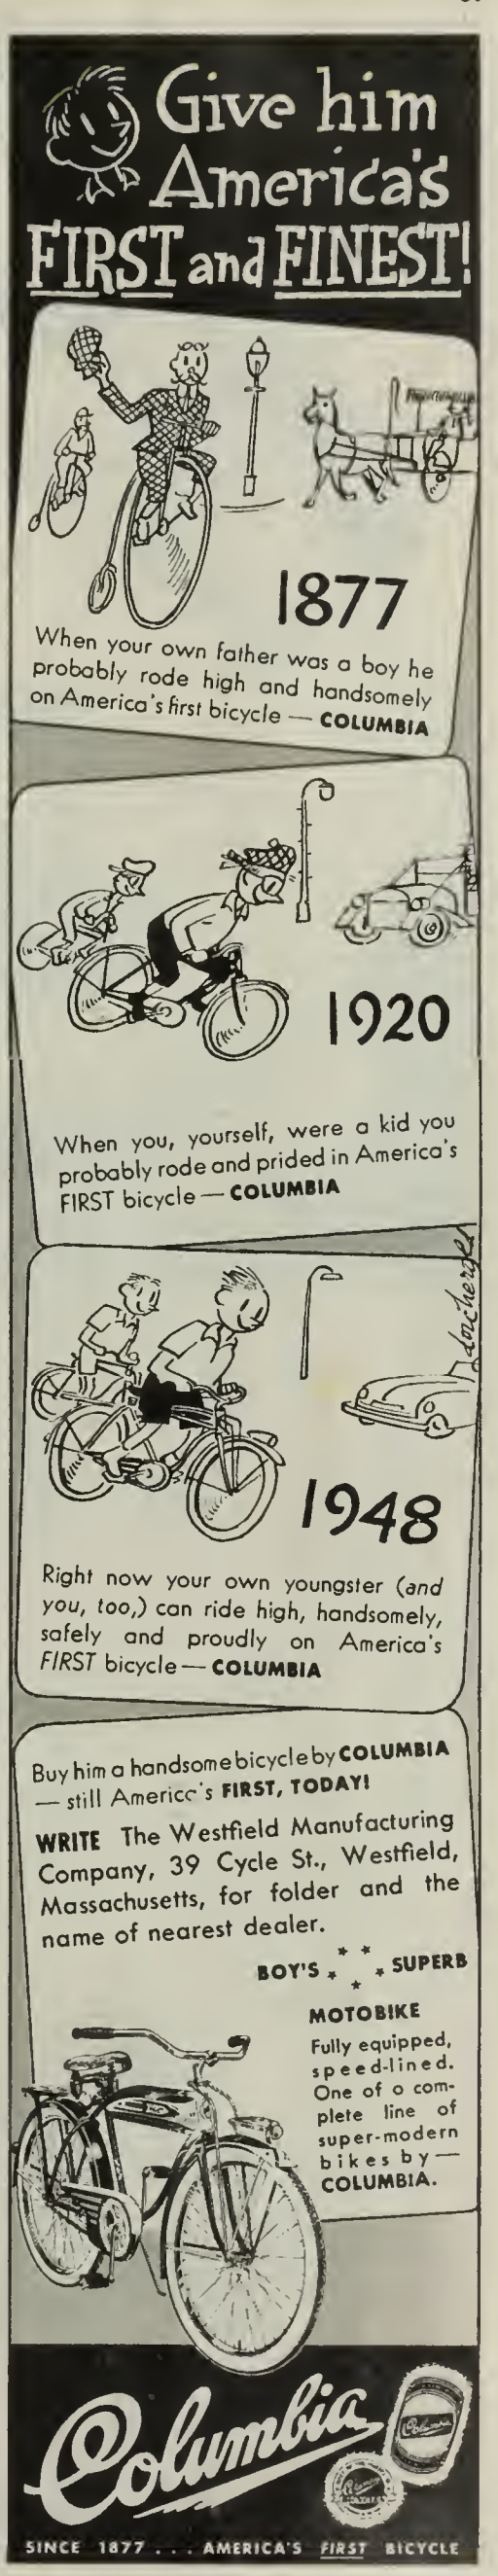
Marshal Stalin said . . . he fully understood the right of the United States to curtail Lend-Lease shipments. . . . Even two months ago it would have been quite correct for the United States to have begun to curtail shipments but what he had in mind was the manner and form in which it was done. He felt that what was after all an agreement between the two governments had been ended in a scornful and abrupt manner. He said that if proper warning had been given to the Soviet government there would have been no feeling of the kind he had spoken of; that this warning was important since their economy was based on plans. . . .

LEND-LEASE NOT A WEAPON

Mr. Hopkins replied that what disturbed him most about the marshal's statement was the revelation that he believed that the United States would use Lend-Lease as a means of showing our displeasure. He wished to assure the marshal that . . . there was no attempt or desire on the part of the United States to use it as a pressure weapon. He said the United States is a strong power and does not go in for those methods.

Marshal Stalin said he believed Mr. Hopkins and was fully satisfied with his statement in regard to Lend-Lease but said he hoped Mr. Hopkins would consider how it had looked from their side.

Mr. Hopkins then turned to the question of the Reparations Commission. He said it was true that we had suggested France as an additional member and that the Soviet government had indicated that if France was to be a member there were other countries with equal or hetter claims to be represented. He said that he had not been directly involved in this question since the Yalta Conference because of his illness but so far as he knew our only motive was that France was to be represented on the Control Council for Germany and it therefore appeared reasonable and logical that she should participate in the reparations discussions. . . . He said he did not of course know, but he felt that we would probably not insist . . . on the admission of France. . . .



Mr. Hopkins then said in regard to the Argentine question, since he had not been at San Francisco he would ask Ambassador Harriman to explain that situation. He added that he had been at Yalta and he must say that the marshal was right in regard to the decision there.

Ambassador Harriman said that he

"I told you my cigarette butt
didn't fly back in the carl"

COLLIER'S — DON TOBIN

Always use **COLGATE DENTAL CREAM** *after you eat and before every date*

hoped that he could speak frankly on the subject of the Argentine and that Mr. Molotov would forgive him if he spoke in that fashion. . . . The situation was that we came to San Francisco with a commitment which President Roosevelt assumed at Yalta to support the admission of the Ukraine and White Russia as original members of the world organization and also with certain commitments with the South American countries in regard to Argentina.

At San Francisco, at Mr. Molotov's request, Mr. Stettinius had taken up with the Latin-American countries the question of their willingness to support the Crimea decision in regard to the Ukraine and White Russia. The Latin-American countries had immediately tried to connect this question with that of the admission of the Argentine. Mr. Stettinius had made it plain that he would not make any such connection and if Mr. Molotov recalled, the Latin-American countries had voted solidly in support of the Yalta decision. There was, however, another step to the Ukraine and White Russia question, namely that of inviting them to the conference, concerning which the United States had taken no commitment. . . .

PLACES BLAME ON MOLOTOV

Mr. Harriman said that he, personally, felt that if Mr. Molotov had not introduced the question of an invitation to the present Polish government we might have been successful in persuading the Latin-American countries to postpone the question of Argentina, but that once Mr. Molotov had connected the question of Argentina with that of . . . the present Polish government, Mr. Stettinius felt that because of the willingness of the South American countries to support the Crimea decision and the invitation to the Ukraine and White Russia, he was committed to vote for the admission of Argentina.

Mr. Molotov said that his request for more time had not been granted.

Marshal Stalin said in any event what had been done could not be put right and that the Argentine question belonged to the past.

Mr. Hopkins then said with the marshal's permission he would like to review the position of the United States in regard to Poland. He said first of all he wished to assure the marshal that he had no thought or indeed any right to attempt to settle the Polish problem during his visit, nor was he intending to hide behind American public opinion in presenting the position of the United States.

Marshal Stalin said he was afraid that his remark concerning Soviet public opinion had cut Mr. Hopkins to the quick and that he had not meant to imply that Mr. Hopkins was hiding behind the screen of American public opinion. In fact, he knew Mr. Hopkins to be an honest and frank man.

Mr. Hopkins said that he wished to state this position as clearly and as forcibly as he knew how. He said that the question of Poland per se was not so important as the fact that it had become a symbol of our ability to work out problems with the Soviet Union. He said that we had no special interests in Poland and no special desire to see any particular kind of government. That we would accept any government in Poland which was desired by the Polish people and was at the same time friendly to the Soviet government.

He said that the people and government of the United States felt that this was a problem which should be worked out jointly between the United States, the Soviet Union and Great Britain and that we felt that the Polish people should be given the right to free elections to choose their own government and their own system and that Poland should genuinely be independent. The governm and people of the United States disturbed because the preliminary s toward the re-establishment of Po appeared to have been taken unilate by the Soviet Union together with present Warsaw government and th fact the United States was comple excluded.

He said he hoped that Stalin w believe him when he said that this ing was a fact. . . . He hoped that marshal would put his mind to the of thinking up what diplomatic meth could be used to settle this ques keeping in mind the feeling of American people. He said he hin was not prepared to say how it coul done but that he felt it must be done

Marshal Stalin replied that he wi Mr. Hopkins would take into consid tion the following factors: He sa may seem strange . . . that the So government should wish for a frie Poland. In the course of 25 years Germans had twice invaded Russia Poland. . . . He said these Germa vasions were not warfare but were the incursions of the Huns. He said Germany had been able to do this cause Poland had been regarded part of the cordon sanitaire around Soviet Union and that previous E pean policy had been that Polish ernments must be hostile to Russia.

In these circumstances either Po had been too weak to oppose Ger or had let the Germans come thro . . . He said there was no intentio the part of the Soviet Union to inte in Poland's internal affairs, that Po would live under the parliamentary tem which is like Czechoslovakia, gium and Holland and that talk o intention to Sovietize Poland was st He said even the Polish leaders, son whom were Communists, were ag the Soviet system since the Polish ple did not desire collective farm other aspects of the Soviet system.

In this the Polish leaders were since the Soviet system was not ex able—it must develop from withi the basis of a set of conditions w were not present in Poland. He sai the Soviet Union wanted was that land should not be in a position to the gates to Germany and in ord prevent this Poland must be strong democratic. Stalin then said that b he came to his suggestion as to the tical solution of the question he w like to comment on Mr. Hopkins marks concerning future United S interests in the world. He said whether the United States wished not it was a world power and w have to accept world-wide interest

U.S. MUST BE A WORLD POW

Not only this war but the pre war had shown that without U States intervention Germany coul have been defeated. . . . For this re he fully recognized the right of United States as a world power to tieipate in the Polish question and the Soviet interest in Poland does n any way exelude those of England the United States. Mr. Hopkins spoken of Russian unilateral actio Poland. . . . It was true that Russia taken such unilateral action but had been compelled to.

He said the Soviet government recognized the Warsaw govern and concluded a treaty with it time when their Allies did not reco this government. These were admit unilateral acts which would have much better left undone but the was they had not met with any u standing on the part of their Allies. need for these actions had arisen o the presence of Soviet troops in P (and) it would have been impossib have waited until such time as th

s had come to an agreement on Po-
id.

The logic of the war against Germany
manded that the Soviet rear be as-
ed and the Lublin Committee had
en of great assistance to the Red Army
all times and it was for this reason
t these actions had been taken by
Soviet government. He said it was
ntrary to the Soviet policy to set up
viet administration on foreign soil
ce this would look like occupation and
resented by the local inhabitants. It
s for this reason that some Polish ad-
nistration had to be established in Po-
id and this could be done only with
se who had helped the Red Army.
He said he wished to emphasize that
se steps had not been taken with any
sire to exclude Russia's Allies. . . .
lin then turned to his suggestion for
solution of the Polish problem.

Marshal Stalin said that he felt that
should examine the composition of
future government of National
ity. He said there were 18 or 20
nistries in the present Polish govern-
nt and that four or five of these port-
ios could be given representatives of
er Polish groups taken from the list
mitted by Great Britain and the
ited States (Molotov whispered to
lin who then said he meant four and
t five posts in the government). He
d he thought the Warsaw Poles would
t accept more than four ministers
m other democratic groups.

He added that if this appears a suit-
e basis we could then proceed to con-
er what persons should be selected
these posts. He said of course they
uld have to be friendly to the U.S.S.R.
l to the Allies. He added that Miko-
zyk had been suggested and he
ught he was acceptable and that the
estion was now who else. . . .

Marshal Stalin then said it might be
e to ask some of the Warsaw leaders
come to Moscow now and to hear
at they had to say. . . . He added that
ve are able to settle the composition of
new government he felt that no dif-
ences remained since we were agreed
free elections and that no one in-
ded to interfere with the Polish peo-
.

After each meeting, Hopkins reported
detail by cable to Truman and the
te Department, which kept the British
reign Office fully informed as to the
gress of the conversations. The fate
the San Francisco Conference and
perhaps of the whole future of world peace was at stake and the issue could not wait for Hopkins' return to Washington.

Hopkins' cabled report on the third meeting can be summarized as follows:

By August 8th the Soviet Army will be properly deployed on the Manchurian positions.

The marshal repeated his statement made at Yalta that the Russian people must have a good reason for going to war and that depended on China's willingness to agree to the proposals made at Yalta.

For the first time he stated that he was willing to take these proposals up directly with Soong. He wanted to see Soong not later than July 1st and expected us to take the matter up at the same time with Chiang Kai-shek.

A PLEDGE TO SUPPORT CHIANG

He made categorical statement that he would do everything he could to promote unification of China under the leadership of Chiang Kai-shek. He further stated that this leadership should continue after the war because no one else was strong enough. He specifically stated that no Communist leader was strong enough to unify China.

Stalin repeated all of his statements made at Yalta that he wanted China to control all of Manchuria as part of a United China. He stated categorically that he had no territorial claims against China and mentioned specifically Manchuria and Sinkiang and that in all areas his troops entered to fight the Japanese he would respect Chinese sovereignty.

The marshal stated that he would welcome representatives of the generalissimo to be with his troops entering Manchuria in order to facilitate the organization in Manchuria of Chinese administration.

He agreed with America's "Open Door" policy and went out of his way to indicate that the United States was the only power with the resources to aid China economically after the war.

He agreed that there should be a trusteeship for Korea under the United States, China, Great Britain and the Soviet Union.

This was followed by another cable on the same meeting:

Peace feelers are being put out by certain elements in Japan and we should therefore consider our joint attitude and

t in concert about the surrender of pan. Stalin expressed the fear that the panese will try to split the Allies. . . . The marshal expects that Russia will ie in the actual occupation of Japan d wants an agreement as to occupan zones. He also wants an underding between the Allies as to areas operation in China and Manchuria. At this same meeting, there was also me talk about the endless problem of stwar treatment of Germany. In his ort to Truman, Hopkins said:

"On two occasions Stalin had emphaed the importance of planning at once the organization of the Peace Conence as related to Europe. At your thcoming meeting he will bring this

"We reminded Stalin some days ago t he had made a speech in which he d that he did not favor the dismemberent of Germany. This appeared to be ntrary to the position he took both at heran and Yalta.

"His explanation . . . was that his ommendation had been turned down Yalta and more specifically that Eden d Strang on behalf of the British had ted dismemberment was to be accomshed only as a last resort and that Win, who was present at the conference at ich this discussion took place in Lonn, interposed no objection, hence Sta states that it was his understanding t both Great Britain and the United tes were opposed to dismemberment. ndertook to tell him that this was not case; that while you had made no al decision in regard to this, the United tes considered this an open question d that you would surely want to thrash ut when you meet.

A Visit to the Ballet School

On May 30th, the fourth day in Mosw, Hopkins and his wife enjoyed some htseeing, particularly a visit to the ssian Ballet School. When he met lin at six o'clock that evening, he told host how greatly he had enjoyed seeg this school which was then as it has ays been the veritable fountainhead ballet art for the entire world. Hopns noted: "Marshal Stalin said that alough he had been 28 years in Moscow, had never visited the Ballet School"—ecisely like the traditional New Yorker o says, "I've lived here all my life but e never seen the Statue of Liberty."

The topics discussed at this fourth eeting were the disposition of the Gern fleet, arrangements for the forthcoming Potsdam Conference and, again, Poland. Hopkins stated the basic American attitude toward the difficult Polish question in the following conversation:

Mr. Hopkins said he would like to accent once again the reasons for our concern in regard to Poland, and indeed, in regard to other countries which were geographically far from our borders. He said there were certain fundamental rights which, when impinged upon or denied, caused concern in the United States. These were cardinal elements which must be present if a parliamentary system is to be established and maintained. . . . He said for example:

1. There must be the right of freedom of speech so that people could say what they wanted to, right of assembly, right of movement and the right to worship at any church that they desired;

2. All political parties except the Fascist party and Fascist elements who represented or could represent democratic governments should be permitted the free use, without distinction, of the press, radio, meetings and other facilities of political expression;

3. All citizens should have the right of public trial, defense by counsel of their own choosing, and the right of habeas corpus.

He concluded that if we could find a meeting of minds on these general principles . . . he was sure we could . . . agree on procedures to carry them into effect. . . .

Marshal Stalin replied that these principles of democracy . . . would find no objection on the part of the Soviet government. . . . He said, however, that in regard to the specific freedoms mentioned by Mr. Hopkins, they could only be applied in full in peacetime, and even then with certain limitations. He said for example the Fascist party whose intention it was to overthrow democratic governments, could not be permitted to enjoy to the full extent these freedoms. He said secondly there were the limitations imposed by war. All states when threatened by war on their frontiers . . . had found it necessary to introduce certain restrictions. . . . With reference to freedom of speech certain restrictions had to be imposed for military security. . . .

Marshal Stalin continued that he wished to give a few examples. He said that at the time of the revolution the Russian Communist party had proclaimed the right of freedom of religion as one of the points of their program. The Russian patriarch and the entire then existing church had declared the Soviet government an anathema and had called on all church members not to pay taxes nor to obey the call to the Red Army but to resist mobilization, not to work, etc. He said what could the Soviet government do but in fact to declare war on the church which assumed that attitude . He added that the present war had wiped out this antagonism and that now the freedom of religion, as promised, could be granted to the church.

The fifth meeting on May 31st involved a detailed discussion of candidates for the Polish government. In all of these discussions, Hopkins repeated many times that it was the desire of his government that the Polish government should be friendly to the Soviet Union, and Stalin agreed this was all that he demanded. But, here again, as Roosevelt had said to Churchill, "The Russians do not use words for the same purposes that we do"; and there was apparently no way of translating the word "friendly" from one language to the other so that it would end up meaning the same thing.

Conference for Two Only

After the fifth meeting, Mr. and Mrs. Hopkins had dinner with Stalin. Some 20 of the most important men in the Soviet Union were present. After dinner Hopkins had a conversation with Stalin, nobody else being present except the interpreter, Pavlov. Hopkins wrote the following record of this:

I told Marshal Stalin that I wanted to impress on him as earnestly as I knew how the unfavorable effect in America caused by the detaining of the fourteen Poles within Poland, and, specifically those that were charged only with having illegal radio transmitters. I made it clear to him that I was not talking about the others charged with more serious crimes. . . .

Stalin then said that he had information in regard to these prisoners which was not available to us and inferred that all of them were engaged in what he called diversionist activities. He stated that he believed that Churchill had misled the United States in regard to the facts and had made the American government believe that the statement of the Polish London government was accurate. Just the opposite was the case.

Marshal Stalin stated that he did not intend to have the British manage the affairs of Poland and that is exactly what they want to do. Nevertheless he stated that he believed me when I told him it was having an unfavorable effect on public opinion in America and he assumed the same was true in Great Britain, and therefore he was inclined to do everything he could to make it easy for Churchill to get out of a bad situation because if and when all the evidence is published it would look very bad for the British and he does not want to make the situation worse than it is. He stated that the men must be tried but that they would be treated leniently and he clearly implied that he was going to consider at once what could be done. . . .

During the next few days, voluminous cables passed back and forth between Washington, London and Moscow containing comments on all the various Polish names mentioned. Churchill cabled Hopkins his congratulations on the splendid job that he was doing and he cabled Truman that a break in the deadlock seemed to be resulting from Hopkins' devoted efforts. In one of these cables, Churchill referred to "The Iron Curtain" which had descended over Europe; this phrase did not come into popular currency until a long time later.

On June 6th, Hopkins had his sixth and last meeting with Stalin and Molotov, with Harriman and Bohlen also present. During this, the following conversation took place:

Marshal Stalin said that he wished to

"Your folks gone—friends all gone —maybe we can sit back and enjoy these last two days here"

In Pursuit of Happiness Revere Adds to Your Pleasure

thank Mr. Hopkins for his great assistance in moving forward the Polish question.

Mr. Hopkins then said he would like to raise an entirely separate question with Marshal Stalin and that related to the impasse which had come about at the San Francisco Conference in regard to voting procedure in the Security Council. He said he had received an urgent message from President Truman to take this up with Marshal Stalin and to indicate the seriousness of this matter. He said it referred to the Soviet insistence that nothing could be discussed by the Security Council without the unanimous vote of the permanent members exclusive of those involved in a particular situation.

He said that the United States government had agreed with the marshal that there must be unanimity among the members in regard to all questions involving enforcement action in any of its aspects but that in the consideration of methods for the peaceful settlement of disputes, parties to the dispute, whether permanent members or not, would abstain from voting.

He added that the United States thought the Yalta formula as agreed on safeguarded the freedom of discussion and the right of any member to bring before the council any situation for discussion. And that this right, which was rightly a question of the agenda, should therefore be decided by the council by simple majority without any power having the right to veto it. He said he earnestly hoped the marshal would see eye to eye with us and the other sponsoring powers and France who were agreed on this question.

Mr. Molotov said that the Soviet position was based squarely on the Crimea decision and that (in) matters involving peaceful settlement parties to dispute would not vote and that the full unanimity applied only to enforcement action. The Soviet position was that the same formula for peaceful settlement should apply in deciding whether or not the council should take up and discuss any given question. (Ensued a conversation in Russian between Mr. Molotov and Marshal Stalin from which it was clear that the marshal had not understood the issues involved and had not had them explained to him. During this conversation Marshal Stalin remarked that he thought it was an insignificant matter and that they should accept the American position.)

SMALL NATIONS AS WARMAKERS

Marshal Stalin then stated that he had no objection to a simple majority being applied in discussions relating to pacific settlement but of course not to any matter involving enforcement action. He said he stressed this aspect because he knew these considerations were raised by the small nations. He had most respect for the small nations (but) it must be admitted there was a tendency among them to exploit and even to create differences between the Great Powers in the hope that they would obtain the backing of one or more of the Great Powers for their own ends. He said it was a mistake to believe that just because a nation was small it was necessarily innocent. . . . After all two world wars had begun over small nations.

Mr. Hopkins said he thought that possibly the difficulties at San Francisco had grown more out of misunderstandings than real differences. . . .

Marshal Stalin then stated that he was prepared to accept the American position on the point at issue at San Francisco in regard to voting procedure.

The real crux of the dispute at San Francisco had been whether the Soviet Union could prevent even *discussion* of any issue by means of its veto. Hopkins subsequently wrote: "There can be no question that the United States' perm nent long-time relations with the Sov Union are going to be seriously han capped not so much by the fundamer differences in ideology between a capi ist economy and a Socialist state, but tween our fundamental notion of hum liberty—freedom of speech, freedom the press and freedom of worship."

As this final conference for Hopk in the Kremlin came to an end, he pressed to Marshal Stalin on the part Mrs. Hopkins and himself, their gr appreciation for the many kindne and courtesies they had received dur their stay in Moscow. . . .

Following this last meeting, Hopk cabled Truman: "Marshal Stalin agr to accept the United States position garding voting procedure in the counc This was the real news that the San Fr cisco Conference had been saved.

INVITATION TO POTSDAM

Hopkins arrived back in Washing on June 12th and breakfasted with T man the next morning. The Presid congratulated him warmly on the ext of his accomplishment in Moscow a urged him to go to the Potsdam Con ence the next month. But Hopkins kn that Byrnes would by then have s ceeded Stettinius as Secretary of St and he felt sure that his presence at P dam would create inevitable embarra ment, not because of any differences opinion or ill will between the two m but simply because of the obvious f that both Stalin and Churchill were l accustomed to dealing with Hopkins a might therefore seem to by-pass Byrn authority.

Truman appreciated the validity these points and did not urge Hopkin reconsider.

This was an extraordinary momen Hopkins' life. For he was, for a days, something of a national hero. all the tributes paid to him, the one t touched him most came from a lad Paris, Missouri, who was unknown him—Mrs. Mary P. Blanton, wife of editor of the Monroe County App She wrote: "When I read the editoria my husband's weekly paper this morn my impulse was to send it to you. N of us are averse to praise and 'Those v stand in high places' may need a littl times. I hope your health is much proved and that you will soon be v and strong. The Middle West is pr of your work for our country."

The editorial that Mrs. Blanton closed was as follows:

PALACE GUARD SAVED THE DAY

Harry Hopkins is receiving muc applause from newspapers and pol ticians who tried so hard to destro him before Roosevelt's death. A ways they sneered at him as "Th palace guard." When a recent cris arose between Russia on one han and Britain and America on th other, President Truman sent Harr to Moscow to iron things out. A though in wretched health, he mad the trip and did the job, thus pro ing the late President knew what h was doing when he kept this gre American around. A lot of thos who now applaud him should b apologizing to him for past slander

Despite Editor Blanton's admonit I know of no instances of apologies ing made to Hopkins for "past slande However, during the seven months t remained of his life, the hate-droo columnists did not pay much attentio him, probably because Hopkins' g friend, their real target, was dead. T now had nobody left to slander but great friend's widow.

THE END

SHE'S A BIG GIRL NOW

Continued from page 22

who had through sheer perversity put obstacles in his path. He started jotting down notes on the subject. His policy had never been one of active pursuit, but one of patient waiting, with gifts of jewelry in one hand and of tobacco in the other. "Among primitive peoples," he began, and stopped short. He pushed his papers aside and entered upon a long line of reflection, staring unseeingly at the wall. Then, chuckling a little, he reached for the telephone directory—

He was too intent upon his thought to hear a shrill piping from the front porch. But Sally heard it, and came downstairs to let Mercedes into the living room.

"Why," said Mercedes, "have you got that towel around your head?"

"I've just washed my hair."

"Why don't you let the lady downstairs wash your hair?"

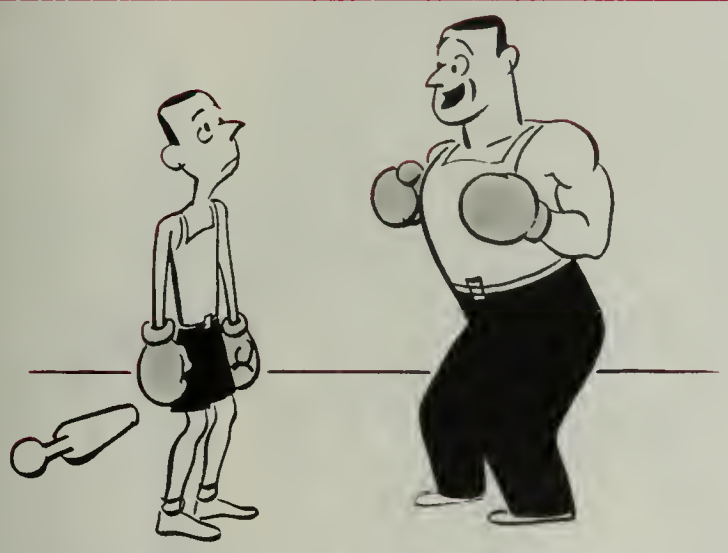
"I don't know. I never thought about it."

"Mother does. Paula does."

Sally eyed the child absently, for the first time in her life considering the idea of a professional shampoo and wave. But in the next moment she was remembering her status in Medville. A girl who chased a boy. The laughingstock of the whole town.

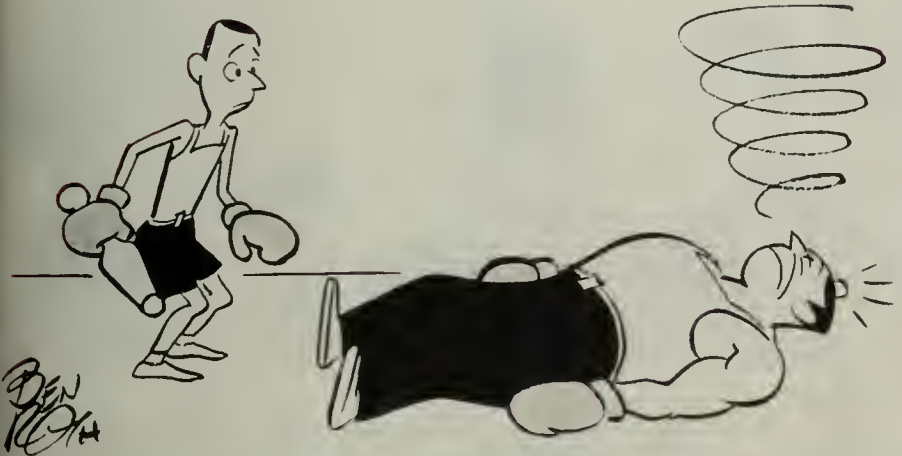
There wouldn't be any point in having her hair waved. But Mercedes was reclaiming her attention. She had come over, it seemed, to return some of Sally's photographs that had fallen under the porch swing.

"Tom didn't want to bring 'em," she announced.



Sally's face flamed. "That's all right," she muttered. "They weren't important ones anyway."

Mercedes looked at her admiringly. "He's scared of you! Paula says so."



It was hard to curb a person who thought her remarks were exceedingly complimentary, and it was almost impossible to persuade her to go home. Mercedes, at least, had looked on Sally with favor.

MERCEDES WHITNEY continued to be her one friend. She was over morning, noon and night, Sally's only living contact with the outside world. Sally herself seldom ventured beyond the security of the Richards' ragged hawthorn hedge. She even avoided coming face to face with the mailman. And she tortured herself by imagining the things people were saying behind their hands. *Why, she kept rushing over there with pictures to show him and she kept calling him up and asking him to the movies! Oh, she must just have embarrassed him to death, my dear!* She was alone, except for Mercedes, all day long, and she had plenty of time to conjure up these conversations.

Her father had made no comment on this hermit's life she was leading. He himself was very busy. He was writing, of course, and he was also putting through a plan to keep himself fit, as he explained, for next year's jaunt to the Solomon Islands. He had ordered the equipment of a small gymnasium to be set up in the old red barn, this equipment including a punching bag, boxing gloves,

"I've just insulted your wife, Mr. Fertig! Now, what do you do?"

How would you say it?

1 **Soft** as a baby duckling. Can you think of a better way to describe what your fingertips *feel* when you pick up a Mallory Hat?

2 **Lively** as a fencer's foil is another way of describing it. If you happen to crush or dent a Mallory, just a touch will bring it right back into shape again.

3 **The MALLORY Vacationer** is a good example of what we mean. Hatters would describe it as "mellow"—a quality difference you can tell the moment you take it into your hands. The Vacationer is a comfortable, *lightweight*, jaunty style—your dealer has it in this fall's smartest colors. In *Pliafelt*,* $10.00. Other Mallory Hats, $8.50 to $20.00.

This picture of Honey Girl is displayed wherever Yello-Boles are sold.

Identify Yello-Bole pipes by the honey-seal in the bowl. It keeps the honey fresh.

a horizontal bar and a sensational set of traveling rings.

These fascinating objects had hardly been installed before a small coterie of admirers began gathering around Septimus. First there was Shorty Perkins, a stolid boy with white eyelashes, not very bright. There were the Elliott twins, Jerome and Jimmy, aged ten. Following the twins came Albert Morris, a lugubrious young man who looked like a sheep.

This was not the prey that Septimus was awaiting, but before the end of the week his patience was rewarded. Tom Whitney had ambled into the barn.

"What a swell setup, sir! I'd heard about it."

"A man needs to keep himself in shape," said Septimus.

With that, he hoisted himself to the traveling rings, moving from one to the other with dexterous half turns. Tom watched him for a few minutes, then he found the boxing gloves and suggested their putting them on. The two circled about the barn floor, feinting at each other, with Septimus barking instructions.

"Gosh! You're good, sir!"

"Well, I fooled around with boxing back in my college days. Not bad sport for a young fellow. I might," he added, carelessly, "give you a few pointers!"

The boy was grateful. In the end it was agreed that he should drop in every afternoon.

Septimus, however, was crafty. He did not tell Sally about Tom's first few visits. He was waiting for the inevitable question from Tom.

"I never see your daughter around, Mr. Richards. Doesn't she ever come out here?"

Septimus endeavored to keep any trace of elation from his voice. "Oh, this wouldn't appeal to a girl much."

Tom hesitated. He looked embarrassed. "I guess she doesn't think I've been very neighborly. I've been so busy with one thing and another. But do you suppose she'd like to go to a movie tonight?"

"You might ask her. She's in the house somewhere."

TOM started toward the back door. Septimus, grinning broadly, sat down on an old milking stool and congratulated himself. He had been convinced, of course, that the psychology which had served so well in West Africa would be just as effective in the Middle West. He had been virtually certain that no boy in any neighborhood could long resist a barn gymnasium. But having a tidy sort of mind, Septimus Richards was gratified to have proved the fact. It was, moreover, very agreeable to dwell on his little daughter's happiness—

Tom had returned. "She won't go," he said.

There was an incredulous note in his voice which found a shrill echo in the voice of Sally's father. "Won't *go? Why* in Heaven's name *not*?"

"She says she's got some letters to write."

Septimus was a stunned man. When he went into the house, he tried to elicit some satisfactory explanation from Sally, and failed entirely.

Sally waved her fingernails, which she had just painted a lovely pale pink. "He doesn't interest me," she said.

It took Septimus some moments to achieve the power of speech. "I suppose you realize I've got to go on giving this fool kid boxing lessons! I've promised him! Boxing lessons every afternoon!"

"Well, I'm so dreadfully sorry, Dad," she murmured, "but there's just nothing I can do about it—Look, do you like this shade I've got on my nails? It's called Colonie."

Septimus' answer was brief and peevish. He was rubbing the small of his back with a tender hand. At his age, he could have dispensed with boxing gloves and traveling rings.

He went on boxing, however. Tom came over every day and soon Septimus found himself liking the boy and sharing his hurt bewilderment over the extraordinary aloofness of Sally Richards, who had been going to town on shopping trips, buying clothes which she brought home and put carefully away in a closet.

But, although she avoided Tom adroitly enough, she continued to see Mercedes, who could not, in any case, have been avoided. The devotion of that little person had never wavered.

She leaned against Sally. "I love you. An awful lot. I wish you'd marry Tom so you could be my mother-in-law."

"I wouldn't be even if I ever did—which I wouldn't."

Mercedes considered this vaguely, and dismissed it. "Tom wants to know how a girl can write letters every night. He says it's crazy."

"Does he? How amusing," Sally said.

This state of affairs went on for a week. Actually, it was all quite simple. The trouble with Septimus was that he lacked a feminine instinct. His daughter, on the other hand, no longer lacked it. Calmly she was awaiting the final, necessary word.

Mercedes, that tireless liaison officer, supplied the word in due time, "Tom's mad," she reported. "He keeps askin' me and askin' me who you're writing to that's so darn' wonderful you haven't got time for anybody right next door. He's awful mad, Sally."

Sally responded to this with a cryptic smile and a chocolate cupcake, whereupon she went to her room and arrayed herself in her new blue Shantung dress and her little gold platform sandals. Coming down again, she paused bef the hall mirror to give a few last touc to the smooth waves of her hair. T she sauntered out to the barn.

Her solicitude for her father charming to behold.

"Oh, Dad! I just wanted to rem you not to exercise too long! My go ness, it's just been perfectly awful way you've been overdoing lately and She broke off in pretty confusion. " hello, Tom! I didn't know you w here!"

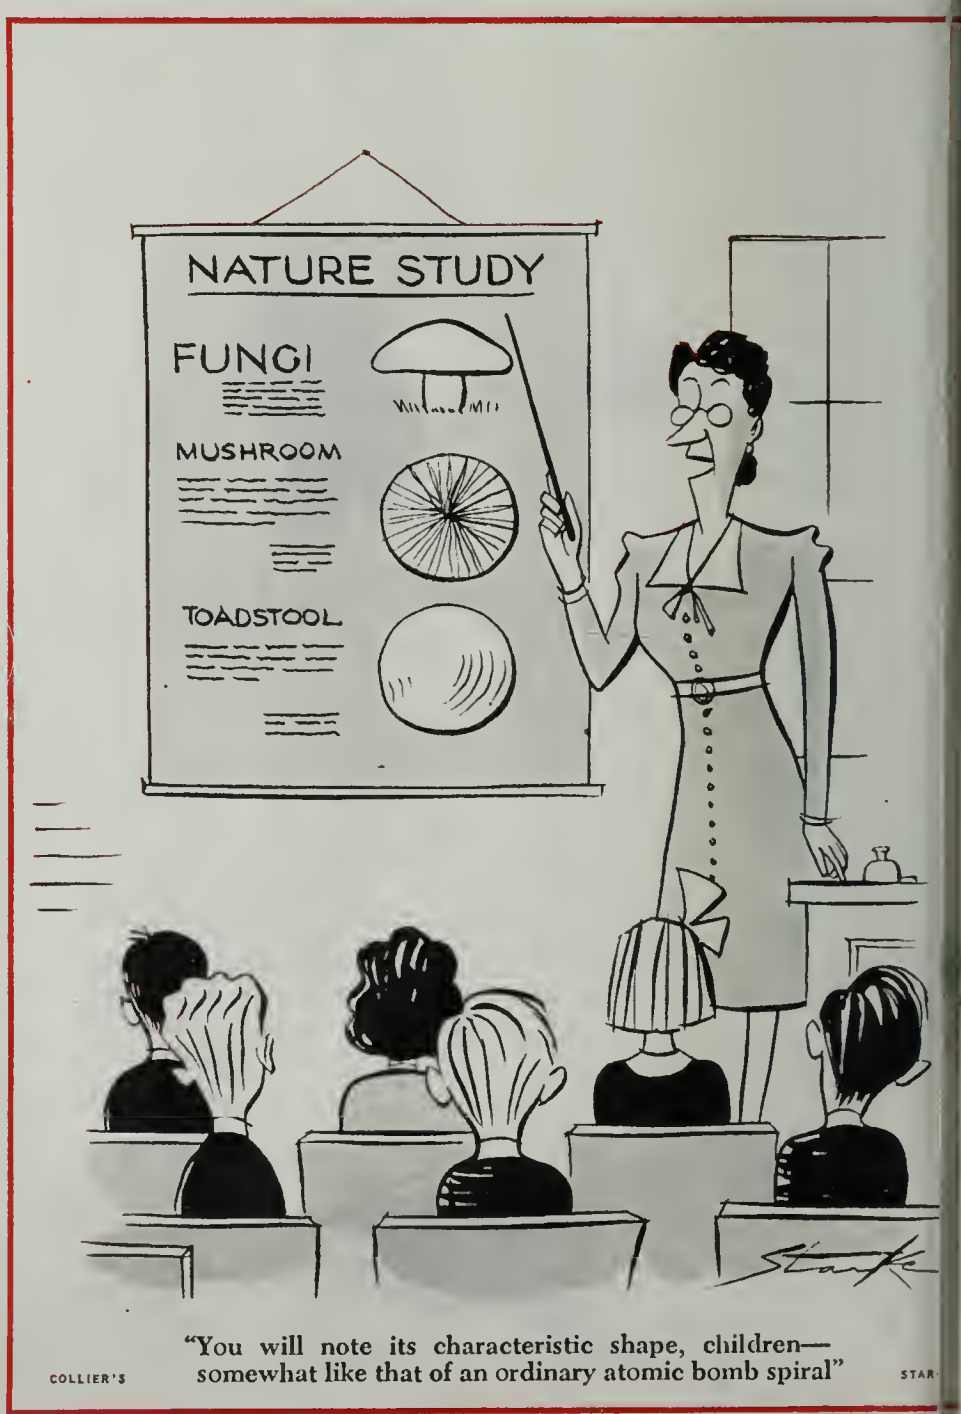
"Sure," Tom said. And casually jumped over the horizontal bar. T he took a few ferocious jabs at punching bag.

"Mercy!" murmured Sally. "H strong you are!"

SEPTIMUS RICHARDS consid his daughter, who was no longer a tle girl. Then he smiled, but he smile himself and began taking off the glo He slipped out of the barn, but nei Tom nor Sally paid any attention. To eye had fallen on the little gold platf shoes.

"Kind of cute."

"Oh, they're nothing! I just wear th around the house."



He looked at her and she looke him. He wanted to kiss her and wanted to be kissed.

They made not the slightest m toward each other and that was all t was to it. But it was one of the mos tolerably thrilling moments either them would ever know.

His voice was unsteady. "Could go to a movie tonight?"

Sally lowered her lids, discreetly, eyes that were shining like stars. "W I guess I could," she said.

A PRINCESS SELLS HER SARONG

Continued from page 24

In her own wardrobe Madame Sunario has the royal sarong of a sultan, the only Indonesian personage whose raiment can bear the likeness of the Garuda bird, a mythical creature which provided transportation for the Hindu god, Vishnu. This sarong was worn by the princess' great-great-grandmother.

Currently the Sunario sarongs are produced in little shops where a woman will work on a single garment for as long as three months. The design is painstakingly painted on both sides of the cloth with molten wax, heated over small charcoal fires and applied through a hollow-handled instrument called the *tjanting*. The cloth then is dipped into dye, leaving the wax-colored sections uncolored.

The wax is removed, and this process is repeated with other applications of wax and different-colored dyes, until the beautiful finished product emerges, printed on both sides.

The best sarongs are those called Tiga Negeri, or "made in three countries." Since different parts of Indonesia are noted for superior artisanship in one specialized phase of batik, Tiga Negeri sarongs receive their basic color in North Java, are sent to East Java for the application of the intricate design, and then to Central Java for the minute background designs.

Such a sarong is priced at $2,000 in Indonesia; and probably will cost an American $3,500 or more.

A Sort of Japanese New Look

Only once was there an attempt to alter the ancient art. That was made by the Japanese occupiers who demanded a design called "New Asia." The sarong makers dutifully produced a sarong to these specifications, but the "New Asia" part of the design always ended up around the ankles, or the buttocks. That put a finish to that.

As Princess Sunario demonstrated (and as many American women now are learning), there is an art to *wearing* a sarong. The idea is to wind the rectangle of cloth about you so that it looks attractive and does not *un*wind disastrously in the first strong gust of wind.

First, the princess makes some pleats at the left end of the sarong, and holds it so that both ends are equidistant from the small of her back. At this point she gives a little hop, reminiscent of a football shift, with her legs spread slightly apart. The unpleated right end is wrapped around her left hip to the front; the pleated left end is brought over it, and around the right hip, ending up with the pleats in front. The top of the pleated edge is tucked in at the waist. A *stagen* or cummerbund sometimes is used to hold the sarong in place at the waist. (Men's sarongs are donned in reverse and tucked in on the right side.)

However, ingenious American women, finding Western hips unsuited to the Indonesian technique, have devised their own methods of wrapping the sarong, a development which the princess approves "so long as it is attractive."

The hopping motion is to get just enough leg room to enable one to take short, ladylike steps. "You must," says the princess, "be able to hear the sound of your legs against the cloth when you walk."

Today Princess Sunario's biggest problem is something more basic than conducting sarong-winding classes. In the first place transportation problems make it difficult for her to get her sarongs into this country for some months.

In the meantime several top-flight American designers and manufacturers have become interested to the extent that, while waiting for Javanese sarongs to arrive, they are planning to put copi the market next winter. Famous des Tina Leser is doing her entire resort line this year in fabrics and d copied from priceless sarongs. River Mills and Everfast, two o biggest manufacturers of cotton p are coming out with imitation bati spring; so are Onondaga and Bian big silk manufacturers. Designers Simpson and Adrian have caugh sarong bug. An artist-designer n Mura Dehn is making expensive, engraved sarongs in the Javanese ner. Fabric designer Wesley Sin will turn out assembly-line-printe rong fabrics. Batik-type draperies covers and neckties are beginning t mine the landscape.

The real thing in expensive sa will be shown at the Asia Institute ir York in a show to open October After that, they will be displayed in cities throughout the United State

The princess' second major pr is that the sarong industry in Ind always consisted of hundreds o sweatshops, in which the Javanes sans toil for wages approximat cents a day. The princess' objecti hire away as many of these artis she can, assemble them under on pay them vastly improved wage then turn out sarongs by modern, bly-line methods.

The smart money in the Neth and in Indonesia seems to think sl able to accomplish this monument They base their opinion on the fa she never has been stopped by tr or overwhelming odds. For instar donesian men, in accordance wit lem custom, are permitted to ha wives at a time; and divorce is a affair. (Her Westernized fathe recently was elected president State of West Java, had several w his youth.) In the face of th princess has succeeded in remain one and only spouse of Prince S She achieved this by the simple ex of taking the unfortunate man as day and telling him, "If you take wife, I say goodby."

The sarong industry is not cc much of a chance against her.

TALE OF A CAT

SIRS: When my son Jerry who was a sergeant on Okinawa saw the cartoon of the egg-stealing rats in July 31st issue (Keep Up With the World), he said it reminded him of the smart cat they had on the islands, which lost a front leg and the medics made it a wooden one with rubber tip so the mice and rats wouldn't hear it coming and when it caught a rat it killed it by hitting it over the head with his wooden leg.

R. J. BROWN, Wildomar, Cal.

COVER GIRL

DEAR SIR: I am ten yrs. old. I would like to be a cover girl on Collier's magazine. My picture is enclosed in the letter. I have auburn hair. It very very curly. I have blue eyes and freckles. I'll do anything to get a chance. We get your magazine all the time.

PATTY DALEY, Watertown, Mass.

SORDIDELPHIA

WALTER DAVENPORT, EDITOR: Turning to Dickson Hartwell's Philadelphia: Corrupt and Not Contented (Aug. 7th), my glance became a gaze as I read the wording on Mayor Bernard Samuel's billboard: "Give the Kids a Brake."

After having read the article it would be somewhat difficult to suppress the feeling that somebody ought to give somebody a "Brake" and see that it is used to its fullest capacity to stop the sordid mess that is Philadelphia.

KENNETH M. ROBERTS, Bridgeport, Conn.

. . . Philadelphia's story should be written by a man who knows economics, social forces and the historic background of the city instead of another tiresome reporter's recital of misdeeds by small-fry politicians and grafting coppers.

Everything said about Philadelphia in your article can be said about most large municipalities in some degree. Your correspondent missed the boat by failing to point out that Philadelphia suffers from being a "factory town."

The workers of this town not only tolerate but favor a system which provides them with such petty vices as will relieve the tedium of living in a town without a spiritual destiny.

This destiny was forsaken a generation ago when the leading industrial and financial families deserted Philadelphia for the suburbs and surrounding countryside.

J. WALTER BIDDLE, Philadelphia, Pa.

JUDGE LINCOLN GOLDSBOROUGH

DEAR SIRS: Judge Goldsborough Takes the Stand (Aug. 7th) sure was a grand piece. There are damn' few judges around these days who can compare with him. Judge Goldsborough should be the headman of the United States—not Harry S. Truman or Thomas E. Dewey.

D. MURPHY, Yonkers, N. Y.

. . . "And, madam, if anyone bothers you or your little girl, you come down here and tell me about it." These words from Judge Goldsborough remind me strongly of another lawyer-congressman - humanitarian —one A. Lincoln.

DON JONES, Fort Wayne, Ind.

TRY THIS DRUGLESS WAY-
FOR SOUND REFRESHING SLEEP

Sound, *natural* sleep is the only kind that counts if you want to wake up rested in the morning. That is why Ovaltine is recognized throughout the world as the ideal sleeping aid.

Ovaltine contains absolutely no drugs. It acts in an entirely *natural* way. You take it hot at bedtime. It helps to break down nervous tensions built up during the day —induces natural relaxation and sleep. And furthermore, it helps rebuild you while you sleep, because the important food elements found in Ovaltine are digested and absorbed readily — even while your body is in this relaxed condition.

You Can Tell Very Quickly

You can tell in three nights whether Ovaltine will help you in your situation. Just purchase a small-size jar for a trial. You will find it inexpensive. Remember that Ovaltine is not habit-forming, but it may be a very good habit to form.

OVALTINE

PLAIN AND CHOCOLATE FLAVORED

HAS POLIO MET ITS MATCH?

Continued from page 30

which might conquer these microbes. Such an attack, he knew, would be horribly expensive, and killingly monotonous. Years of work might have to go into such a job, and the results obtained might be precisely zero. At the same time, the stakes involved were enormous in terms of human life and human suffering. If *any* drug could be found which would effectively stop viruses—

Dr. SubbaRow charted the broad outlines of the project. A test virus would be selected for use in the experiments, preferably a virus 100 per cent fatal to mice. Mice would be shot with this brew of death. Then they would get shots of drugs under test: dyes, botanicals, sulfas, chemicals—everything which might have a slender chance of conquering the virus death brewing in mouse bodies. The project would require testing of thousands—maybe tens of thousands—of drugs. The mice needed might run to millions.

Yet this seemingly hopeless approach had succeeded grandly before. The great Paul Ehrlich used this method, plowing through 605 arsenic compounds before he found the 606th which defeated spirochete of syphilis. It checked the reproduction of the spirochete, giving body defenses an opportunity to overcome the disease. Gerhard Domagk used this same trial-and-error process in finding the original sulfa drug.

Wanted: Man Unafraid of Failure

The man who would handle the job had to have very special qualifications. First and foremost, he had to be a bear for work. He also had to be a person temperamentally able to stand the monotony of failure—week after week, month after month, maybe year after year. There was no assurance, remember, that any drug would ever work satisfactorily against any virus.

Dr. SubbaRow had in mind the ideal man for the job: a lanky, friendly 38-year-old German named Fritz Popken, who only by accident is a scientist and not a farmer. Born near Blexen, Germany, in 1910, his farmer parents strained the family resources to put him through *Oberrealschule* (junior college). But family funds failed, and Popken decided to come to the United States, make some money and return to Germany.

After a series of farm jobs he landed at the Lederle Laboratories to fill a job handling calves used to produce smallpox vaccine. There he moved up rapidly, becoming more and more deft in his technique for handling research animals. When Dr. SubbaRow's big virus research project was ready for launching, Popken was ready to take over.

Popken selected, as the virus he would work with, one which causes equine encephalomyelitis. Farmers have a simpler name for this disease—a form of horse sleeping sickness. They call it blind staggers. In epidemic form, it swept the horse world of the United States in 1938, striking 180,000 animals, killing 40,000 of them.

There were several reasons for selecting this virus to work with. First: It attacks nervous tissue, to cause inflammation of brain and spinal cord. Second: Any drug which worked against this red-hot virus might have effect against other viruses as well. Third: A vaccine was available which would keep laboratory workers from contracting the disease. This was an important consideration. Scores of virus researchers have paid with their lives for slight slips in the laboratory.

Popken selected the one assistant allotted him: pretty Kathleen (Kitty) Richards. She had had no scientific training whatsoever. But she had a magic touch in handling laboratory animals.

With these two in charge, the project started rolling. Twenty mice were to be used in testing each drug. Each mouse would be shot in the belly with the virus of horse sleeping sickness. Half of the group would be set aside to act as "controls"—to get sicker each day, to become paralyzed, and to die on the fifth or sixth day after inoculation. The other ten would be given forty-eight hours in which to permit the virus to get a head start. Then they would get the drug under test, four shots a day.

Since forty drugs were under test at a time, that meant using 800 animals. And as they were each shot four times a day, that meant giving 3,200 hypodermics a day!

At the outset, it was perfectly clear that there wouldn't be enough hours in a normal workday to do all the jobs that there were to be done: preparing hypodermics, injecting mice, keeping records of every mouse death. Popken solved this by revising the usual concept of the workday. The staff of two started at 8:00 A.M., and the last series of injections was finished at 10:00 P.M. This went on six days a week. Sunday, things slowed down a bit. It was a half holiday. There would be no vacations, and only one full holiday a year: Christmas. For week after week, mice died by the thousands. Nothing, *nothing* seemed to have any effect whatsoever on the horse death brewing in mouse bodies. Lab reports were always the same: Nothing to report.

While this was under way, another group of scientists was at work at Bound Brook, New Jersey, at Calco Chemicals, the world's largest makers of sulfa drugs. Calco is a sister comp of Lederle. Both are divisions of American Cyanamid Company. U Dr. Martin E. Hultquist, Calco h team of chemists stringing atoms gether to make new sulfa drugs w might prove superior to those alread the market. These new products going along to Pearl River for Popk test, along with the other drugs which he was working.

Three Mice Refused to Die

In April last year, ten mice got o these new drugs—a drug no more an less promising than the hundreds w had preceded it. Popken started s ing it into infected mice, four tim day. He expected them to become p lyzed and to die right on schedul thousands of their brothers had die fore them; but three out of the ten that got the drug didn't behave in th pected way. They weren't beco paralyzed, and showed no signs of d It wasn't much to shout about, re Only three out of ten mouse lives s Still, nothing had done so well be Here was a shred of hope, a glimm of light. It was the first time *any* had shown any promise.

Calco was informed. Maybe thi the break everyone had been waiting searching for. This particular which had the ability to save thre of ten mouse lives wasn't the answe it looked like a start toward the an Would Hultquist and his ban talented chemists tinker gently wit promising sulfa? Would they mod ever so slightly, adding an atom lopping off one there? Would the

AQUAMATIC

Most Carefree Watch in the World

other words, start making a whole series of new sulfas as closely related to this promising one as possible?

For three months, Hultquist and his co-workers kept a steady stream of new sulfas going out to Popken. Sulfa No. 261 was delivered in June, 1947. In its first trial, it saved five out of ten mouse lives. When larger doses were given, the score was raised to three out of four! The atmosphere around the laboratory was charged with excitement. It looked—at long last—as though the virus front had been cracked.

Here was the first time *any* drug had been demonstrated to have *any* really marked activity against *any* virus. Such a drug deserved a name. Its chemical name was out of the question. N-(2-thiazolyl)-phenol sulfonamide. Its "simplified" name wasn't much better: phenosulfazole. Lederle selected a pronounceable trade name: Darvisul.

Facing the Supreme Test

Darvisul had shown that it could protect mice against a devastating horse sickness. Now for the big question: Would Darvisul be able to check the reproduction of a whole variety of viruses, as penicillin checks the reproduction of a whole variety of bacteria? Would it, for example, attack the virus of infantile paralysis?

Unequipped to handle polio research, Lederle passed this problem along to a prominent physician heading a team of researchers. The physician worked out details of his study. He would inject mice with MM virus—a laboratory strain of polio virus that will infect mice. He would give injections up to 100 times the amount necessary to kill them. He would permit this deadly brew twenty-four hours to incubate and spread to all tissues in the mouse body. Anything wh could overcome this generalized disas would have to be good. Then he wo give the animals shots of the new dru

The long series of experiments be again, and Darvisul turned in almost actly the same results that had been tained with horse sleeping sickness. T drug could save up to 75 per cent of m infected with polio, in experiments which *all* untreated animals died.

Darvisul was almost completely n toxic. It appeared to be by all odds blandest, safest sulfa ever discovered. didn't hurt kidneys, liver, brain or b marrow. In fact, it didn't seem to h anything—except virus. But up to n the virus that Darvisul stopped had b in mice. Could the drug stop polio a child before the virus had a chance produce paralysis or cause death? Th was a ready-made test ground in wh this question might be answered.

Early last winter the Rio Gra Valley of Texas suffered a polio c break. When spring came, the dise began moving northward—to Galvest Beaumont, Houston, other Texas ci and towns. Of the lot, Houston was hardest—hard enough to have an en floor in big Jefferson Davis Hospital aside to handle the sick.

In this particular epidemic, polio leaving one out of four children v severe paralysis, killing one out of ev fourteen stricken.

Of all Houston physicians, none more interested in the disease than yo and aggressive Dr. Paul Harring Also, he was probably handling m cases of polio than any other Hous physician. He was the man Dr. S baRow was looking for when he wen Houston in June this year. He liste to the stories of the mouse work, to ports on toxicity tests. Would he be v

COLLIER'S WILLIAM VON RIEG

DON TOBIN

SPORTING ODDS

In a baseball game between the University of Wisconsin and Bradley University, there were Bradley men on first and third and no outs. The next batter hit a high foul to the first baseman, who tripped over a tarpaulin and fell down after making the catch. With one out, the man on third decided to score after the catch and accordingly started for home. The catcher got the ball in time but the runner managed to miss the catcher's tag. He also missed the plate and ran all the way to the backstop. The catcher could not follow him because the man on first was well on his way to third and had to be put out. That made two down. When the catcher turned to get the man who had missed home plate the untagged runner had returned to the Bradley bench and could not easily be identified, so the catcher ran down the bench and began to tag every player. As he neared the end, the man he was after jumped up and ran for home, which was being covered by the pitcher. The catcher tossed the ball to the pitcher, and the runner was officially tagged out. This crazy triple play required nearly two minutes to complete.

—Paul Farley, Milwaukee, Wis.

to try Darvisul on his own patients? said he would.

t the outset, one thing was readily arent. When polio virus attacks in human body, it does its greatest nage to the horn cells along the spinal l—where motor nerves root into the l itself. Once these vital connections gone, nerves can no longer trans- the messages that set muscles to k. Muscles become paralyzed in the e way that a cut telegraph wire be- es paralyzed. Once this damage is e, it is apparent that no drug can e any effect. This meant that Darvisul ld have to be given early—*before* the s had done too much damage.

ne thing was immediately apparent. drug was excreted rapidly by the eys. To keep large amounts of it in body at all times, it would have to given by vein instead of by mouth. would be dripped into a vein on a tinuous basis, day and night, for ods up to three days.

An Early Checkup on Results

his, then, was the treatment devised. this is written, it is too early to give full results from Dr. Harrington's es of patients. Many of the patients still in the hospital, and the final out- e of their cases won't be known for e time. But by now, certain things readily apparent.

arvisul often has a marked retard- effect on fever. Spinal taps add other ificant facts. In polio, spinal fluid is etimes clouded with castoff cells. number of these cells present is n taken as an index of the destruc- the virus is causing. Under Darvi- treatment, spinal fluid is often clear in a day or so.

few of those treated with Darvisul e developed paralysis. In general, have been patients who were ted early in the series, when relatively ll doses of drug were being used, or patients in whom the disease had gained real headway. Most patients who got Darvisul soon enough, and who got it in sufficiently heavy dosage, have come out of their sickness with no crippling, not even any muscle weakness. Out of sixty patients treated to date, up to this writing, there has been but the one death (mentioned earlier in this article).

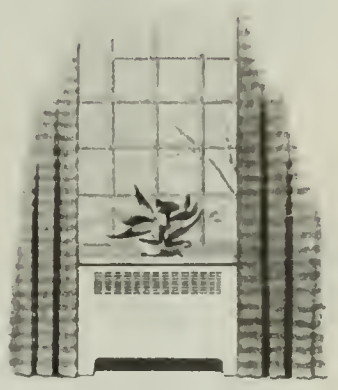
This work with Darvisul is so new that it is impossible at the moment to foresee its full potentialities, but there are a number of possibilities. Laboratory work has shown that the drug has some action against the virus of influenza. It also appears to have prophylactic action against polio. Mice given the drug by mouth have resisted polio infection. This may open the way for giving children in an epidemic area a pill or so a day to help them fight off any polio virus that may enter their bodies.

Leads such as these are being checked. The National Foundation for Infantile Paralysis has several Darvisul investigations under way. Research men look upon Darvisul as the first of a series of dramatic drugs which will come along in rapid succession. Popken's team now has six members, and the schedule of mouse tests has been doubled—in the search for similar but superior drugs.

In the end, it is likely that Darvisul will occupy a position much the same as the original sulfanilamide. Today sulfanilamide is not used much. It has been superseded by a series of superior, related compounds. But it was sulfanilamide which opened the way for conquest of the major bacterial diseases. Darvisul may play the same brilliant role in the virus field.

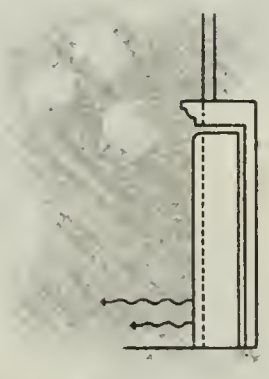
Even now it appears to be the inevitable forerunner of other drugs which will conquer colds, flu and other virus sicknesses. By opening the way into this vast unknown, Darvisul may well become a major milestone in medical research.

THE END



Now...TRANE Convector-radiators bring you

Everything IN HEATING



Beauty for Your Home

Now you can decorate as you like, put your furniture where you wish, without a thought for heating. This wonderful new heating literally *hides in the wall,* using almost no space.

Comfort for Your Family

Like June weather? This amazing new heating blends gently circulating warm mild air with just the right touch of sunny radiance, bringing June into your living room—and keeping it there all winter long.

Economy for Your Budget

Even with all these advantages, Trane Convector-radiators cost less to install than any other system for steam or hot water. Fuel costs are less, too. Instant fingertip control stops wasteful overheating.

Today send for this colorful new booklet and see how Trane Convector-radiators blend smoothly into smart new interiors.

Second Man on the Ticket

By EDWIN LANHAM

ILLUSTRATED BY MARIO COOPER

Concluding a story of love and political intrigue

The Story: CLYDE MCDONALD, scandalmongering Washington columnist, boards the GOVERNOR WILLIS G. WARBURTON Vice-Presidential campaign train, and LUCY STRAWN, the governor's secretary, learns that someone in Hydetown (the governor's boyhood home) has promised McDonald a juicy item for his column. ROY MASON, Warburton's campaign biographer, is sent by plane to Hydetown. There he meets JOHN MILLS, Warburton's boyhood chum, and HATTIE PERKINS, Warburton's old schoolteacher. Hattie is the only one in Hydetown who is not going to attend the Win With Warburton rally. And GINNY, Hattie's pretty grandniece, tells Roy that Hattie knows some secret about Warburton which she plans to tell McDonald. Roy returns to the campaign train, and learns from Warburton that when Warburton was a boy he once borrowed school funds for his personal need and that Hattie knows this. Press aide BILL EVERS says that they cannot let McDonald find this out. And though McDonald has already left the campaign train for Hydetown, Lucy, Warburton and Roy take a chance and fly secretly to Hydetown, leaving the campaign train. There Warburton talks to Hattie Perkins and gets her to promise that she will not tell McDonald—but their conversation is interrupted when they hear McDonald coming in. They leave without McDonald seeing them and since it is raining all plane flights are canceled—they are forced to hide out in a tourist camp. It seems as if Warburton will be discovered when Roy conceives the idea of driving ahead to meet Warburton's wife's train and getting the wife, RUTH, to fake an illness. This is done and Ruth stays in bed in the home of John Mills. Warburton then arrives on the scene and the story that he has rushed to the bedside of his ailing wife is generally accepted. Unfortunately, Ruth Warburton makes the mistake of appearing at the head of the stairway where Clyde McDonald can see her. Warburton knocks McDonald down, and Roy tries to smooth things over by telling McDonald that Ruth was delirious. Roy is afraid that Ginny Perkins will tell McDonald the secret that Hattie knew. So that night, in a tavern where McDonald and Lucy Strawn are also present, Roy promises Ginny that he will get her a job in Washington. Ginny tells McDonald about this, and Roy and McDonald fight. A photographer present takes a picture of Roy knocking McDonald down and Roy and Lucy are thrown out of the tavern. Back at John Mills's home Roy and Lucy are discussing the situation when Roy suddenly kisses Lucy. He has never done this before and Lucy tells him to let her go. Roy says, "No, Lucy, I'll never let you go."

I LOOKED up and saw Governor Warburton, in his dressing gown, at the head of the stairs. He grinned and said, "Well, bless you, my children." I let Lucy down to the step beside me and the Governor came on down the stairs.

Lucy was blushing violently, and my face was hot. I said, "We thought you were asleep, Governor. We didn't want to wake you."

"That's understandable," he said, still smiling. "But it happens I was listening for you to come in, Roy. We received a telegram from Bill Evers. He's flying here, and his plane gets in at a quarter to midnight. I thought perhaps you could meet him."

"Yes," I said. "Sure."

The Governor's hands rested deep in the pockets of his dressing gown and he looked tired. "How did things go, Roy?" he asked.

"Not good, Governor."

"Yes, I expected that."

Lucy said softly, "The only good thing to

Ginny was sobbing wildly. "It's my fault, Clyde, all my fault. Please forgive me. I was thoughtless and silly. Please forgive me, Clyde

GOOD NEWS about Long Distance

Today, Long Distance calls go through in about two minutes on the average. Now and then there are delays, but we're handling nine out of ten calls while you hold the line.

We've added many new circuits and switchboards and more are coming along. Our operators know their job.

Our aim is to put your out-of-town calls through faster than ever before. And we're working hard to do it.

BELL TELEPHONE SYSTEM

report is that Roy struck another blow for decency, Governor. He clipped Clyde."

The Governor smiled wearily. "Good for you, Roy. That's some consolation, at least. I guess it's our only consolation, isn't it?" He rubbed his knuckles in the palm of his other hand.

"Maybe we can bluff it through, Governor," I said.

He shook his head. "I'm afraid I don't have the talent for that, Roy."

"I recall you bluffed me with a ten-cent bet," I said.

"Roy," he said, "you're different. You bluff easy."

Lucy laughed, and Governor Warburton laid a friendly hand on my shoulder. "You'd better run over and pick up Bill, son," he said. "We'll all sit down together and decide what's our best course." His fingers squeezed my shoulder. "And thanks for trying."

"He definitely tried," Lucy said. "He had so much lipstick smeared on him he looked like the Dying Gladiator."

"I can still detect a trace of it," the Governor said mildly.

It was Lucy who blushed, as I took out my handkerchief and rubbed my mouth. The Governor said, "Better get on over to the airport, Roy." He turned back up the stairs.

Lucy hesitated and started to follow, but I called to her, "Aren't you coming with me?"

"Well—if you want me to."

"You bet I want you to."

We went out to the car, and when we were settled in the front seat, before I switched on the lights, I put my arm around her.

"Here, here," she said reprovingly. "We've got an errand. Let's go, Roy."

I grinned and said, "Now don't play hard to get."

It was the sort of thing a man says when his emotions are functioning and his brain is not. I had not thought it an offensive approach, but Lucy bristled and said sharply, "I know that would be contrary to your conception of me, but—"

"Now, Lucy," I said. "I—"

"After all," she went on in the same tight tone, "a girl who's been around as much as I have—"

"Honey, I didn't mean anything like that," I protested. "I—"

"Drive on," she said.

I SWITCHED on the lights, started the car and drove away. I was angry, because she had chosen to misunderstand, and we were well out on the highway before either of us spoke. Then I said, "Lucy, I thought we had a pretty good understanding of each other. I didn't expect you to take a conventional, feminine attitude with me."

"What attitude did you expect?"

"Why, the same as usual," I said. "Friendly, matter-of-fact, nonchalant. You know, sophisticated."

"Sophisticated!" Lucy said.

"Yes," I said. "Sophisticated. That's what you've led me to expect. I didn't think you'd get feminine about it."

"Roy," she said, "if you were a little *more* sophisticated you wouldn't be such an utter fool!"

Oppressive silence returned, a bitter silence. My hands clenched the steering wheel. I remembered the kiss on the stairs, and the memory seemed suspended in time, as that moment had been. I still felt her lips on mine. It had been a revelation, that kiss. It had revealed a great deal more of Lucy Strawn to me, and something more of me to myself.

"Now look," I said. "We've known each other quite a while. We've had a sort of arm's-length relationship, always sniping at each other, and I'll admit that I had you in a category. That's a fault of mine, pigeonholing people. But I had you wrong all along."

"Roy," she said quietly, "why don't you just think it all out for yourself firs and then let me know the verdict?"

"What verdict?"

"Guilty or not guilty, of course."

I decided there was no point in di cussing it further. I had offended he and I thought it better to await anothe time. She had the situation by th handle, and was cooking on a hot fire.

I DROVE on fast through the nigh watching the road, and the first gestur of amends came from Lucy, who lighte two cigarettes and passed one to m Although we exchanged no words, seemed agreed that the episode wa closed, or at least tabled.

We covered the forty miles to the ai port in considerably less than an hou and arrived before Bill's plane landed. parked the car and we went to the lunch room in the administration buildin for coffee. At the door Lucy stoppe short.

Over her shoulder I saw honey-colore hair, shoulder length. Ginny Perkins wa perched on a stool, alone at the lunc counter, stirring a cup of coffee. Sh turned her head, saw us, and her eyes g big.

"Ginny," I said, "you get around."

AN INFANT, SLEEPING

It's a cherub, it's a darling,
It's a lambkin, it's a love;
As gentle as an angel
And as peaceful as a dove:
The same
Wee tot
That yowled
And howled
And bawled
And squalled
And shrieked
And eeeeked
And woke every soul
In the whole darn' block,
Only last night,
At three o'clock!

—Ethel Jacobson

"I'm just a chauffeur," she said. "Ju chauffeuring Clyde." She slipped dov from the stool, and her eyes met Lucy for an instant, then she looked at m "Roy, may I speak to you alone?"

"Yes, of course."

Lucy said tartly, "I'll find some oth lunchroom."

"Please excuse us, Miss Strawn Ginny said. "It will only be a momen She touched my elbow and walked ahe of me out of the lunchroom. I caug up and asked, "Where's Clyde?"

"He's here somewhere, asking abo planes." She turned in the corridor a leaned against the tiled wall. "He's pret angry, Roy."

"He started it," I said.

"Roy," she said softly, "everything a terrible mess, and it's entirely my fau I don't know how to begin telling you this. Clyde has been checking the hote and now he's looking around here at t airport to see if he can find someone w saw Governor Warburton come in l night."

I kept silent. The old man in th tourist camp had sharp eyes. If Cly happened to stop in that tourist cam with a picture of the Governor to co pare with the man in cabin nine—

"I'm afraid I'm responsible for tha Ginny said. "I shouldn't have told hi I guess, but it slipped out. Honest Roy, I don't want to make trouble."

"What did you tell him, Ginny?"

"Something Aunt Hattie said. T morning she remarked that Goverr Warburton hadn't changed much sin he left Hydetown, except to put on a lit

weight, and I asked her how she knew, since she hadn't seen him for thirty years. She said something about seeing his picture in the paper, and changed the subject, but I happened to mention it to Clyde, and now he's convinced that the Governor came to Hydetown to see Aunt Hattie last night. You know, when we found you there."

"Yes, I know," I said. "That's a ridiculous notion."

"And he thinks that storm tied the Governor up," Ginny said. "He even believes Mrs. Warburton's illness is faked." She looked up at me. "How is Mrs. Warburton, Roy?"

"About the same."

"So Clyde is checking up," she went on. "Roy, I'm sorry I made such a mess of everything. Honestly, I just thought it would be fun, but it kept getting worse and worse. Now I'm caught in the middle, and I can't go through with it."

"With what?"

"With any of it," she said. "I can't take that job." She spread her hands helplessly. "Roy, I can't type a lick."

I blinked at her.

"Not even hunt and pick," Ginny said. "I never have held down any kind of job for long. I worked at the grocery store for a while, but I never could keep track of the stock and I was always making silly mistakes. Now don't laugh."

"I'm not laughing, Ginny."

"Then I did a shift at the five-and-dime store," Ginny said. "But I was forever putting stockings in the cash register and money in the paper bag. I couldn't possibly be a secretary to Governor Warburton."

"Ginny, your qualifications aren't important to us," I said. "You know what is important to us."

"I guess I'm not cut out for anything," Ginny said. "Except maybe housekeeping." She started away from the wall. "Goodness, there's Clyde. Roy, I'm going to the powder room. Slip outside and I'll meet you."

CLYDE McDONALD approached us soft-footed, his red hair bright in the tiled room. Ginny said, "Clyde, remember what you promised."

He smiled at her, said, "Okay, honey," and turned to me. "Roy, Ginny thinks I ought to forget what happened at the casino, and that's what I'm going to do. I'm not going to lose my sense of humor over you." He looked me up and down. "I outweigh you sixty pounds," he said.

"For a skinny guy, you swing a lot of weight."

"Clyde, I'm sorry about it," I said. "I lost my temper and I owe you an apology."

"I wouldn't go too far with my apologies, if I were you," he said, and the familiar curl lifted one corner of his mouth. "You'll feel different when I get through with Willie Warburton. You'll want to take that apology back."

The loud-speaker was announcing the arrival of a plane. Clyde cocked his ear. "That's my plane," he said. "Come on, Ginny."

They moved toward the apron, but I saw Ginny whisper something to him and turn away. I went back to the lunchroom, where Lucy Strawn was waiting.

"Ginny has something on her mind," I told her. "I'm meeting her outside. Lucy, you'd better go out to the plane and latch onto Bill Evers. I'll see you at the car."

"All right, Roy."

I WENT out a side entrance and walked around the building. In the shadows near the main doors I found Ginny waiting.

"Ginny, is Clyde taking that plane?"

"No, he's meeting someone."

"Who?"

"A specialist from Baltimore."

"A specialist in what?"

"Pulmonary diseases," Ginny said. "Lordy, I shouldn't have told you that."

"I see," I said. "If he expects to get his specialist in to see Mrs. Warburton, he's crazy. We pick our own specialists."

"Roy, I think he counts on being refused," she said. "He told me it was part of the story." She reached for my hand. "Roy, he'll be here pretty soon. Please listen to me. I want to be fair to him, and he expects me to tell him the story if he fails to get it out of Aunt Hattie, and of course he won't get it out of Aunt Hattie."

"Why should he expect it from you, then?" I said. "If Miss Hattie won't tell, why should you, Ginny?" I eyed her closely. "Except for a price."

She flushed, her eyes downcast. "Roy, I don't blame you for saying that. But I wonder if you have any conception how dull it can be living in a town like Hydetown. I want you to understand it. I want you to know just why it all happened this way. Please listen to me."

"I'm listening, Ginny."

"I had those jobs I told you about,"

"I was just beginning to think civilians were cute and now I've got to get all readjusted again!"

AN OLD STORY

LOCALE	DATE	STORY
Mexico	16th Century	A white traffic line was put down the center of the road between Cuernavaca and Mexico City
North America	15th Century	The Shoshone Indians were shooting dice before the coming of Columbus
Italy	1575	A doctor in Padua diagnosed an asthmatic as an allergy case and cured him by removing his feather bed
Sumer	3000 B.C.	Metal hairpins were worn by the women
France	4th Century	Talcum powder was used as a cosmetic by Gallo-Roman women
American Colonies	1780	Meat and cheese sold for more than a dollar a pound
Persia	1300 B.C.	Bangle bracelets with dangling charms of miniature animals, bells and whistles were popular
France	1785	Benjamin Franklin received an air-mail letter (by balloon) from England
Egypt	700 B.C.	Cemetery workers staged a sit-down strike, as a protest against the tardy delivery of their wages

—W. E. Farbstein

she said, "but I couldn't hold them. A couple of times I started to get married, but with this and that, it didn't come off. I just wasn't satisfied. I guess the one thing I'm cut out for is to be a wife, Roy, but I just wasn't satisfied. I didn't want to live all my life in Hydetown. You *do* see what I mean, don't you?"

"I suppose you mean you've told Clyde the whole story," I said with resignation.

"I'm coming to that, Roy. It began innocently enough. It really did. It was just in fun. I happened to mention to Mel Fisher that Aunt Hattie knew something about Governor Warburton, and we had a talk, and I thought it would be exciting to get Clyde McDonald here and give him a big story. I had read his columns and seen his picture in the paper and I thought—well, I wanted excitement, you see, and I got it. I got entirely too much of it. Now, I'm caught in the middle and I thought I'd just come and tell you the whole thing. If I didn't it would be just plain dishonest."

"Dishonest?" I said.

"Yes," said Ginny, "dishonest. I can't take shorthand and I can't type a lick and I can't hold any kind of job, and, Roy, I don't know that story and I never did."

"You what!" I cried.

"Yes," she said dismally. "Aunt Hattie never told me. I haven't the faintest idea what it's all about, except it's something about a sheepskin coat. *You* told me that."

I stood staring at her, then I leaned against the wall of the building and laughed. Ginny watched me until I was through, without a flicker of expression in her eyes, then she said quietly, "Yes, I suppose it's funny. But now I'm caught in the middle, Roy. What is Clyde going to think of me? I brought him to Hydetown and I led him on and he expects me to tell him the whole story."

"I wouldn't worry about Clyde McDonald," I said.

"But I do, Roy. I've been unfair to Clyde, and now it's a terrible mess. It's my fault you had a fight, and he really has got black eyes, sort of. Did you notice?"

"I noticed a little lipstick on his chin," I said.

Ginny said, "Oh," and paused a moment, then whispered, "Roy, will you do something for me?"

"What do you want me to do?"

A porter was stacking luggage from the plane that had just landed. Ginny took my hand and led me deeper into the shadows.

"I want you to give me that job, Roy. I couldn't take it without telling you the truth. But if you'll give it to me I'll quit later, and you won't have to fire me. And you won't have to pay me anything. Roy, I wouldn't take a salary."

"What sort of job would that be?"

"I just want to be able to tell Clyde that I have the job," she said. "I want to tell him that I promised you not to tell the story, that I signed a contract or something. May I do that?"

I SAW Bill Evers come out of the building with Lucy, looking pale and nervous. They walked toward the car and I grinned, thinking of the news I had for them.

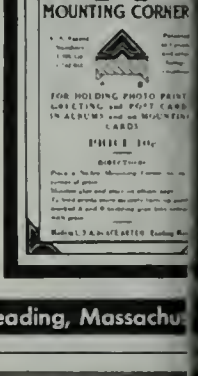
"Ginny, we're not putting anything in writing," I said. "You can tell him anything you like, but we're making no admissions. Why don't you simply tell Clyde the truth, the way you just told me?"

"I couldn't, Roy. What would he think of me? I simply couldn't do that."

"Do you really care what he thinks?"

She moved her shoulders slightly, and after a moment said, "Yes, I do, Roy."

"Ginny," I said, "you have my sympathy. Tell him whatever you please, and I promise to back you up. I'll do all I can for you."



She whispered, "Thank you, Roy," raised herself on tiptoes and pressed a quick kiss on my lips. Then she squeezed my hand, turned and was gone.

I ran into the darkness, groped for the

oor of the car, and threw it open. "It's ll fixed," I cried.

Bill Evers said, "From what Lucy tells e, it doesn't sound fixed. Hello, Roy."

"Hello," I said. "I just this minute xed it. Ginny never knew at all. Miss lattie is the only one who knows the ory, so we're in the clear."

"On that score, maybe." Bill said.

I got in behind the steering wheel and id, "Lucy, I told you Ginny was okay. told you that all along. She's just a mple, genuine small-town kid."

"Yes," said Lucy, "we saw you over ere, necking like simple genuine small-wn kids."

"That was just a friendly good-night ss."

"I've experienced your friendly good-ght kisses," Lucy said crisply. "And by e way, what makes you think you can lieve her?"

"Why shouldn't I believe her?"

"You were burned once, remember. st I heard you hated all women." She aved her hand impatiently, and her tter voice said, "Oh, drive on. Drive n, you—you public toothbrush!"

I SAW Clyde and Ginny at the entrance of the building; a tall man in a black t was with them. I put the car in gear, rned and drove at a screaming pace vay from the airport.

"Take it easy, Roy," Bill said. "You d Lucy can squabble all you like, but t when my life is involved."

"Bill, that guy with Clyde is a specialist pulmonary diseases, probably from hns Hopkins," I explained. "Clyde s imported him to examine Ruth, so I ink we'd better get there first."

"He damned sure won't examine uth," Bill said, and added after a mo-ent's pause: "But I don't like that. Roy, y in hell did you pick pneumonia? The isis doesn't come for several days, and e Governor's schedule will be in a ess."

"What disease would you prefer?" I ked sharply.

"I don't know. You should have cked another one, though."

"I didn't have a Merck's Manual ndy, Bill," I said. "Now, look here, e've worked like dogs on this thing, and looks like we have it straightened out last. Don't come here and quibble."

"Sorry," he said. "I only hope you ve got it straightened out."

"Sure we've got it straightened out."

"Don't take those corners so fast." He reached across Lucy to grab the door handle for support. "All right, maybe you have, but there are enough loose ends to worry me. If McDonald can prove the Governor left his campaign train to fly here and hush his old school-teacher up, he doesn't have to know what the dirt was. He'll hint at that. He'll make it worse than he would if he *had* heard the story."

"He won't prove the Governor left the train," I said, with less certainty. "He's got Melvin Fisher checking on the hotels, but he won't find anything. Lucy, it's fortunate the Governor ruled out a hotel last night."

"How about cabin nine, Roy?" Lucy said.

"Oh, I doubt if Fisher would check tourist camps."

"Why not?" Bill's voice rose excitedly. "Why wouldn't he?"

"We'll have to keep our fingers crossed on that," I said.

"And how about Warburton Day tomorrow?" Bill said. "What have you done about that?"

"We called it off, Bill."

"The speech and all?"

"Yes, and, Bill, you'll have to knock a few days out of the Governor's schedule somewhere."

"Somewhere?" he cried. "Where?"

"That's for you to worry about," I said. "You worry about that, and let me worry about the rest."

"I'm not sure how well you worry, Roy," he said. "You haven't had my training."

"Oh, he worries," Lucy said slurringly. "About big moral questions mostly."

"Yes, I worry," I said angrily. "What do you mean, a public toothbrush!"

"Ease up on the accelerator," said Bill. "You're not mad at that, you know. Apparently it's Lucy you're mad at. Step on *her*."

"I am stepping on her," I said. "Putting her trivial personal problems ahead of the Governor."

"What trivial problem is that?" Lucy asked stiffly.

"Me," I said. "I'm your problem."

"Lucy, do you suppose we could change seats without wrecking the car?" Bill asked. "I don't like it here in the middle."

"So I kissed a blonde," I said. "That's what it's all about. A damned handsome blonde, too. Bill, did you see her?"

100% NEUTRAL SPIRITS DISTILLED FROM GRAIN • GORDON'S DRY GIN CO., LTD., LINDEN, N. J.

"Keep your eyes on the road," he said. "Yes, I saw her."

"The average man kisses 32,709 times in his lifetime," I said. "What's one kiss out of 32,709?"

"Where did you get those statistics?" Bill asked, with interest.

"I read it in the paper somewhere," I said, "or maybe it was the Kinsey Report. Anyhow, I kissed Lucy once, and the hell with the other 32,708. She's the girl for me and she knows it. I wouldn't trade her for 32,000 blondes."

"The odds are precisely 32,709 to one that you'll only kiss Lucy once," said Lucy.

"I'll take a piece of that," I said.

Bill Evers chuckled. "As a matter of fact, I'll take a piece of that myself."

"Besides, it has absolutely nothing to do with your kissing a blonde or anybody else," Lucy said. "You can distribute your lifetime allotment where you please. Our dispute concerned your middle-class attitude toward women."

"Not toward women," I said. "Toward you."

"Precisely," said Lucy. "Toward me."

"Roy," Bill warned, "you're doing seventy."

"We want to get there ahead of Clyde, don't we?"

"Yes," Bill said, "but on wheels, not wings."

"The trouble with Lucy," I said, "is I haven't had a chance to tell the woman that I love her."

"If you stop the car, Roy," Bill said, "and let me drive, you can tell her."

"I won't give her that satisfaction," I said.

"Lucy, when a cautious man like Roy drives the way he's driving, it must be love," Bill said. "Take my word for it." He considered a moment. "But say, this is pretty unexpected. Last I saw of you two, relations were pretty formal. Roy, stop the car!"

I pressed my foot harder on the accelerator and the car rushed ahead; a sign with a wiggly arrow proclaimed a winding road.

"Roy, you hear me?" Bill shouted.

"What does Lucy say?" I kept my eyes on the road.

"Lucy says stop the car," said Bill.

"Good Lord!" Lucy said at last. "Stop, Roy!"

I had the good sense to brake slowly, and brought the car to a stop at the side of the road on a curve. I got out and walked around behind it, and by the time I opened the door on the other side Bill had slid under the steering wheel and Lucy had moved over. She was smiling.

"Lucy," I said. "I'm not mad at you."

"All right," she said, "I'm not mad at you, either."

"And, Lucy, I love you," I said.

"I love you, too," said Lucy.

BILL put the car in gear and started on. He sighed and said, "As I mentioned before, this is so sudden."

The car moved on into the night, and Lucy at last was in my arms. Bill watched the road and drove in silence at a farmer's Sunday pace. It was not until we entered Hydetown that he said, "Kids, I've been counting. You only have a few thousand left. Better save 'em." He tapped my shoulder. "Roy, you can postpone your trivial personal problems until later."

He drove in under the porte-cochere, and said, "Come on, you exhibitionists."

I got slowly out of the car. "Bill, you and Lucy go on in and see the Governor. I'll stay here and head Clyde off. I want to have a talk with him."

"You're not planning anything drastic, I hope," Bill said.

"No, I just want to talk to him. Man to man."

"You mean man to mouse," said Lucy. "Or mice."

A light was burning in the garage and I saw a night watch of reporters playing cards at a table. I walked around to front of the house, and down ac the lawn to the hedge that bordered street. I leaned against a cast-iron s and lighted a cigarette.

Ten minutes later I saw lights t onto the street, two blocks away. moved down to the curb and was wai there when the car stopped. Ginny driving and Clyde was in the mid Nearest me was the tall man I had s with them at the airport.

"Clyde," I said. "I want to talk you."

"I'll do the talking," Clyde said. "T is Dr. Henry McBain. My paper sent him here to examine Mrs. Warb ton, in the public interest. Do we ge to see her?"

"I have no objection," I said. "N rally we'll have to get the permissio Dr. Arnold first."

"Is Dr. Arnold the attending ph cian?" Dr. McBain asked crisply.

"Yes."

"Surely, Mr. McDonald, you had permission before you sent for me," Bain said. "I've made a long trip."

"Where is Dr. Arnold?" Clyde as

"In the house, I believe. You can to him, but first I want a word with Get out."

CLYDE gave me a long look, then out of the car. I led him away the shadows, by the hedge. I had an jective, to steer him away from c nine, and I had a plan that was p vague and depended on how things w It depended also on Ginny Perkins.

"Clyde," I said, "I'm going to do y favor. Not because I'm anxious t you any favors, but because we've enough trouble and we don't want more. I'm going to give you a chan pull your neck in."

"Is that so?" Clyde said.

"You can bring your specialist i you want to," I said. "I'll call the porters in from the garage, and they be witnesses of it. And for that ma I'll pass out prints of the photograp Ego photographer took at the casin point up the part that personal ve plays in this. I don't want to do it way, but if you force me to, I will. let me warn you that you'll be in f shock."

"The hell I will!" he said. "Ruth burton's not sick, and if you let Dr. Bain examine her, I'll prove it."

"Up there in that room," I said matically, "where you see the dim it's a question this minute whether s last through the night. If you wa force your way in there with your ported specialists, with the reporte witnesses, all right."

"That's what I intend to do," C said, but his tone had dropped.

"But first you'd better get orien I said. "I learned just a little while what's been biting you. It seems have an idea there's some old sca here in Hydetown involving the ernor. Isn't that it?"

"Oh, stop," Clyde said, his voice and sarcastic. "You're killing me!"

"Clyde," I went on, "Ginny Perki a nice kid. I hate to see you make of trouble for her."

"What do you mean by that?"

"And I hope you won't hold it ag her," I said.

"Hold what against her?"

"Her making a fool of you," I "She didn't mean to. The kid t you're wonderful. I have an idea in love with you, God help her."

"You conducting a lovelorn clinic said harshly.

"She reads your column regu Clyde," I said softly. "I suppose told you that. Did she tell you she your photograph pasted up in her too? You've been conducting a spondence courtship with her, wi even knowing it. That's why she br

u here. She wanted to meet you. Pre-
re for the big shock, Clyde. She made
e whole thing up. There never was any
ndal about Governor Warburton in
ydetown. You ask anybody in town
they ever heard any. Ginny made it
, just to get you here."

Clyde sucked in his breath, said,
ou're kidding."

"Why should I be kidding? Why do
u think she hasn't told you the story?
ie answer is she doesn't know it, be-
use there isn't any story."

I could hear his breathing in the dark-
ss. After a moment he said accusingly,
ou offered her a job in Washington
shut her up."

"To get her out of Hydetown," I said.
o get her to Washington where I could
something of her. That's why I of-
ed her a job."

"Roy, you're lying through your
th," he said.

"Clyde, she's been stalling you, and
e's afraid you'll hate her for it. She
me to me and told me the whole story,
d I promised to help her out. So go
sy on her, will you? I agreed to for-
t the whole thing. I agreed to keep
ust between the three of us, and I think
u ought to promise the same. Wait
re."

I went quickly away through the dark-
ss, crossed the beam of the headlights,
d reached Ginny's side. I whispered,
et out," and held the door open for
r.

I saw her face, pale in the darkness.
inny, I'm trying to help you out," I
ispered. "But you've got to help me,
."

"In what way, Roy?"

"Back up what I say," I told her. "Play
ng with me, and I think we can close
s whole thing off so that everyone
l be satisfied, Ginny. Will you do
t?"

"Yes, Roy, I'll do what I can."

TOOK her hand and led her toward
the hedge, where Clyde was waiting.
the night we could barely see one an-
er.

"Ginny," I said, "I told Clyde the
ole story, but he wants you to confirm
You don't know any scandal about
overnor Warburton, do you?"

Her voice said faintly, "Oh, Roy, did
u tell him that?"

"Ginny," Clyde demanded, "is this
e?"

"Roy, you shouldn't have done it!" Ginny cried. "Oh, why did you do it?"

"Answer me, Ginny," Clyde's harsh voice said.

She whispered, "Yes, Clyde, I—"

"Ginny, I told him all of it," I broke in. "I told him you made the whole thing up to get him to come to Hydetown. I think he understands."

"But I didn't make it up," Ginny said. "I only pretended I knew when I didn't know."

"But you *don't* know?" Clyde said.

Ginny said brokenly, "Clyde, I'm so sorry."

"You put me in a hell of a spot," he said.

"But I was sure Aunt Hattie would tell, Clyde," Ginny said. "I didn't know she'd change her mind. How could I know that?"

GINNY had let me down, with the customary thump. I said angrily, "Suppose you ask Miss Hattie about that, Clyde. She's already denied that she knows anything, hasn't she? You ask *her*, Clyde."

"But I didn't make anything up," Ginny protested. "Clyde, I just fudged a little." I heard her sob and in the darkness I saw the faint glow of light on her bright hair. "Honestly, I didn't make it up."

"Ginny, why lie about it?" I said. "Clyde doesn't care whether you made it up. Nobody cares." I had to force the thing now; I had to brazen it out and impeach Ginny Perkins as best I could. "No harm is done," I said. "Admit it, Ginny."

Clyde said softly, "So Ginny is a liar, is she?"

"Ginny," I said. "Tell him the truth."

It was very dark by the hedge and I could not see Clyde's face. His bulk was a slightly darker shadow in the shadows. I could barely make it out, and a slight movement of the shadow was all I saw. I never saw his big fist coming. It caught me high on the forehead and knocked me back against the hedge.

Ginny cried out as I struggled back to balance. She tried to get between us, but I shoved her aside and lunged at the biggest shadow. I missed, and staggered into the hedge.

"Stop it," Ginny said. "Stop it!"

Another blow caught my shoulder and I swung again and hit something this

The Road of Planned Progress

time; my fist sank deep and I heard Clyde grunt.

"Please stop it," Ginny wailed. "Please!"

I heard Clyde say, "Get away, honey. Where is he?"

"I'm right here. Come on!" I said, and I moved a step to one side of where my voice had sounded.

"Honey, turn loose," Clyde was saying. "Turn loose of me."

"Don't fight any more," Ginny said. "Please, Clyde."

"I'm right here, Clyde," I said, and moved again.

His voice rose. "Don't hit my girl. Ginny, turn loose."

"No," Ginny said, and I heard her gasp. I saw a separation of the shadows; apparently he had pushed her aside.

I saw the bigger shadow moving again, and swung at it, then his bulk bore down on me. I was crowded against the hedge and he hit me hard on the shoulder. I could not get clear of the hedge and I tasted blood as he smashed my mouth. His whole weight was behind the blow and I went back into the hedge and fell to my knees at his feet.

"Get up," Clyde said.

I was dazed and shook my head. I mumbled, "I'm getting up," and started to push myself to my feet. He stood where he could hem me in against the hedge again and use his full advantage of sixty pounds.

"Clyde, stop it!" Ginny cried. "Don't hit him again. It's enough. Clyde, listen to me. I *did* make it up. I did. I did. I did."

Clyde stepped back a pace and his low voice said, "I'll be damned."

Ginny was sobbing wildly. "It's all my fault, Clyde. Please forgive me. I was silly and thoughtless. Please forgive me, Clyde."

I GOT slowly to my feet. My knees were weak and I swayed against the hedge. I put up my hands to protect myself, but there was no longer any movement of the shadows. I heard Clyde's deep voice murmuring uncomfortably. "It's all right, kid. It's all right. Sure I forgive you. Forget it."

I let my arms fall to my sides. I said, "Thanks, Ginny." I turned and walked unsteadily away, along by the hedge.

Dr. McBain was standing by the car, an interested spectator. He said, "Come over here and I'll take a look at the damage."

"I'm all right," I said, and went slowly across the lawn to the house. At the door I turned and looked back. The beam of the headlights shone along the street, but it was dark there by the hedge and I saw no movement. I opened the door and went into the house.

Lucy and Governor Warburton were sitting on the stairs, and Bill was leaning against the newel, talking earnestly.

"Roy!" Lucy cried. "What happ to you?"

I moved unsteadily toward them said, "It worked, Governor."

"Roy, you poor baby," Lucy's voice said. "There's blood all over y

Bill Evers whistled. "Did Clyd that? Roy, you look pretty bad."

"I'm all right," I said. "It was jus dark out there. Couldn't see a fi front of your face."

"Come with me, darling," Lucy mured. "Let me wash the blood off.

"In a minute," I said. "Gove everything is fixed. I've convinced C McDonald that Ginny invented whole thing because she was smitten his male beauty and the quality o prose, and I guess she was, at There's just a faint possibility she n be a good influence on Clyde."

"Pretty faint," said Lucy, and b dabbing at my mouth with her han chief.

"Anyhow, Clyde won't write any because he has nothing to write," I and pushed the handkerchief a "Even if he finds cabin nine, he nothing to hang the story on. Gove the incident is closed. Our worrie over and I think now I'd better go c my teeth."

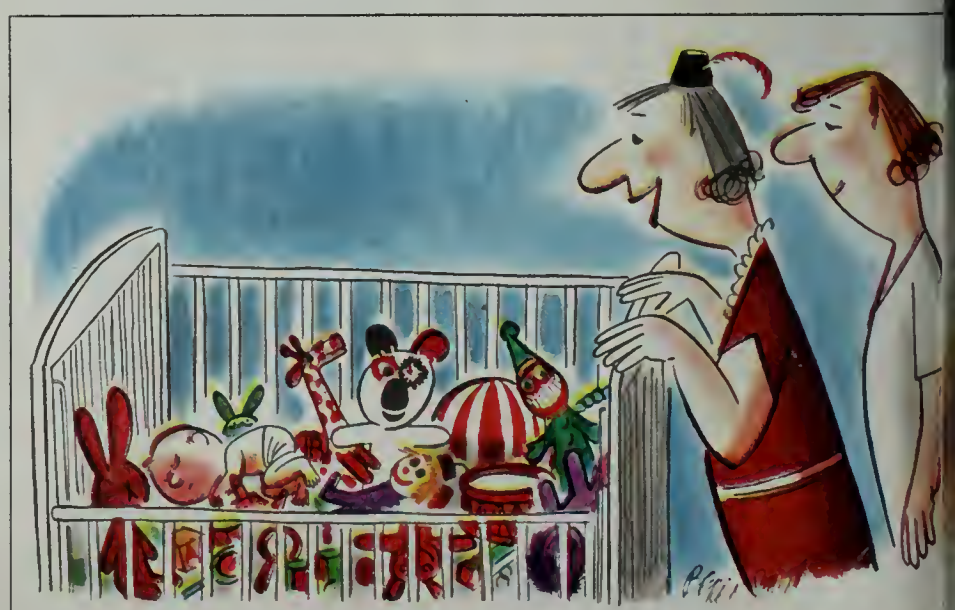
"What about Warburton Day to row?" Bill Evers said. "What abou Governor's schedule? What about i two hundred and fifty straw hats sunbonnets and the big crowd to row?"

"So everybody's happy, Governc said. "Even Bill. He's back to low- worrying again."

"I'm grateful to you, Roy," Gove Warburton said simply. "I'm de grateful. I think now you'd bette Lucy make some repairs." He p my shoulder.

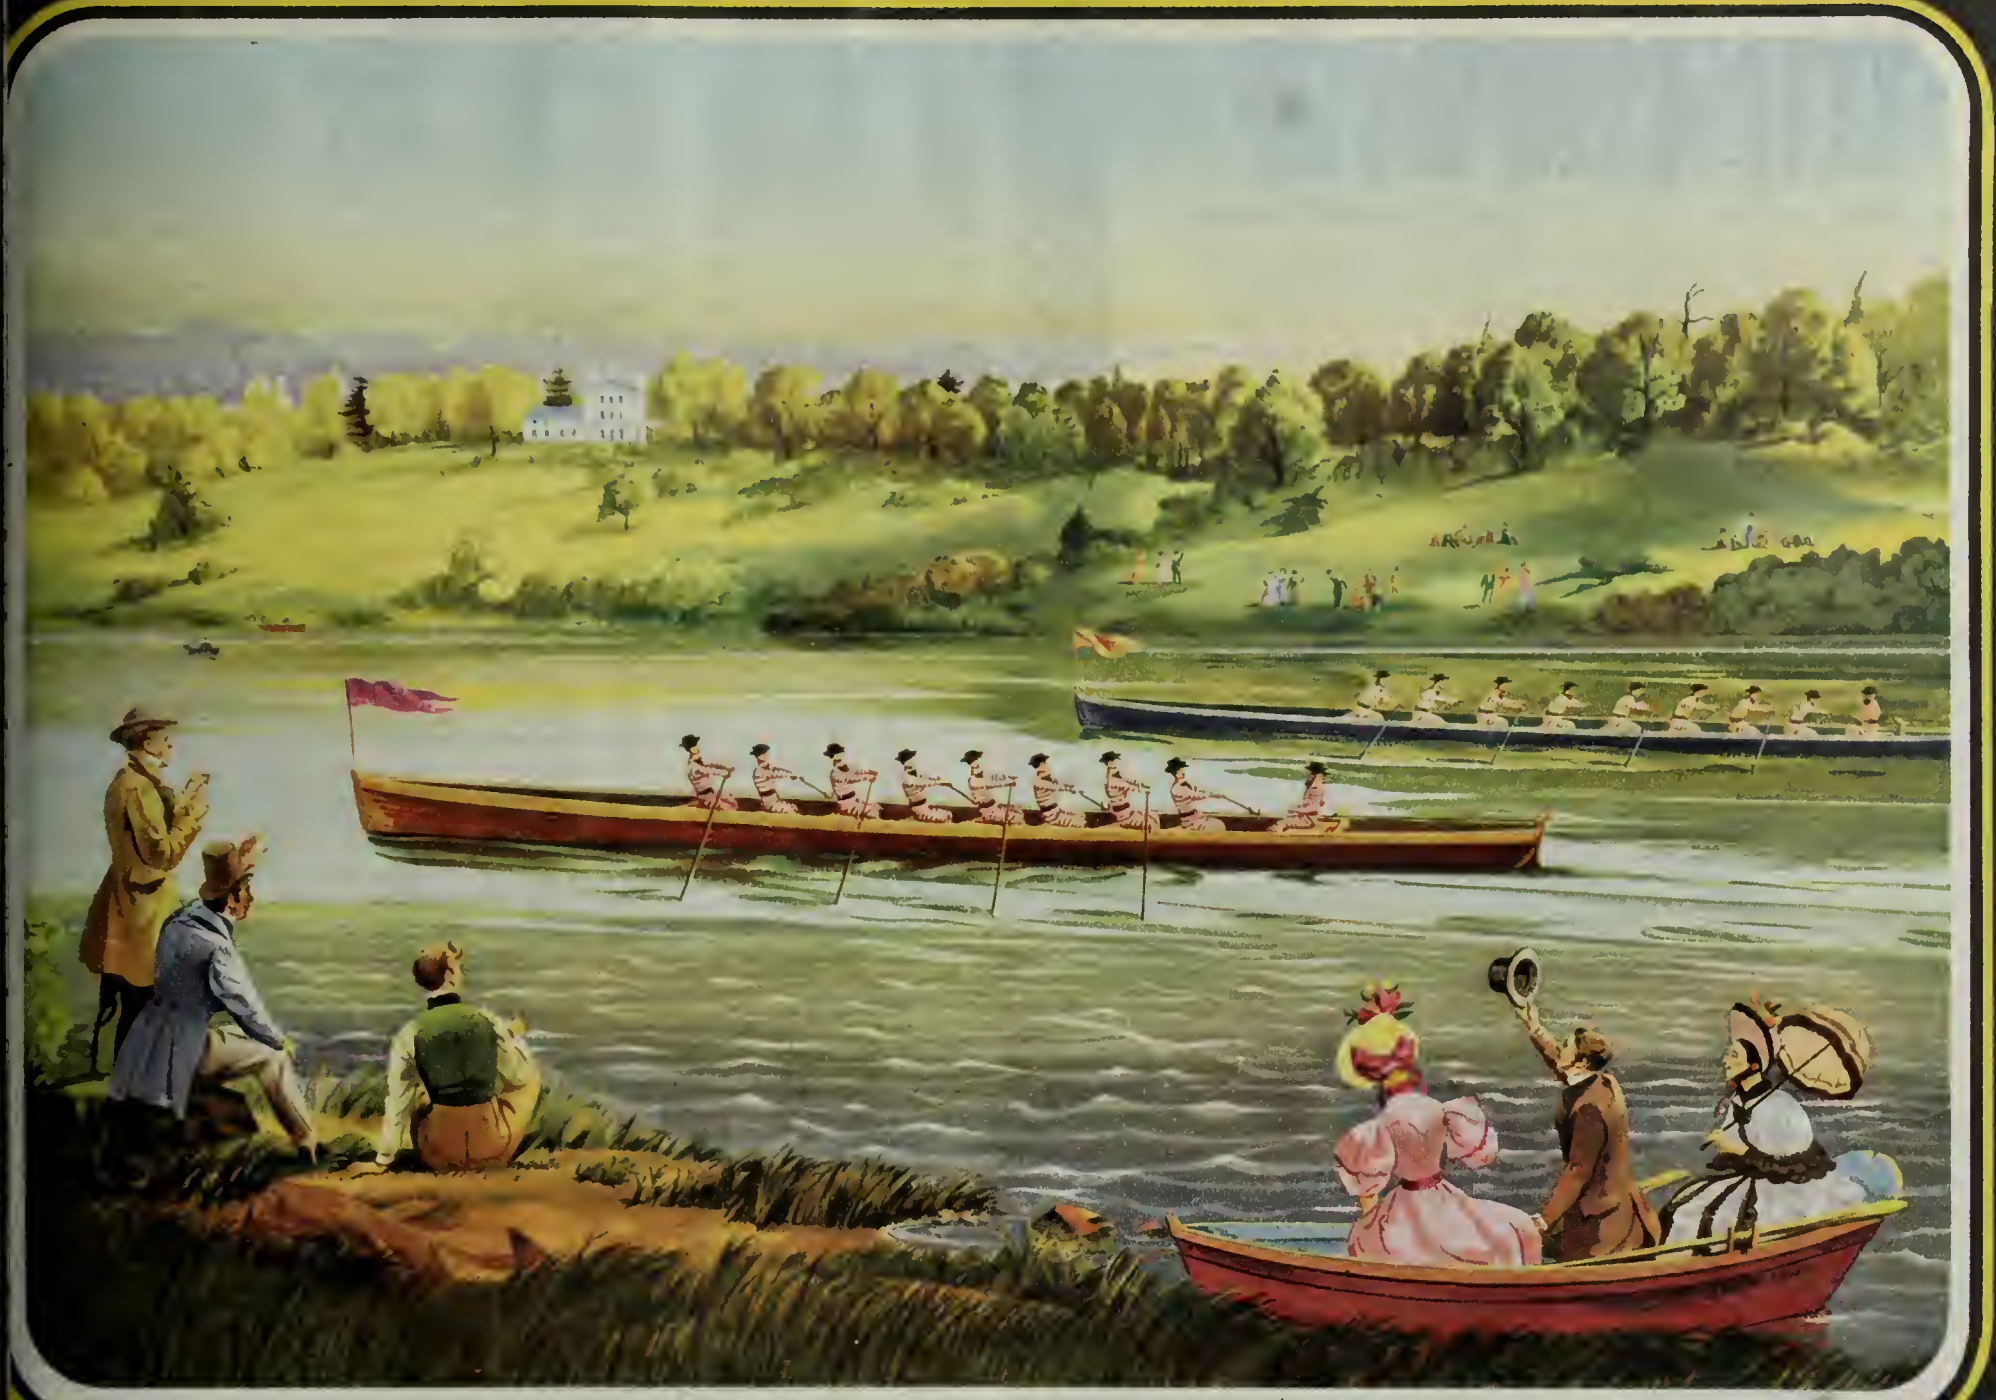
"This way, Roy," said Lucy. She my hand and led me through the pa She turned on the cold water at the per sink, wet her handkerchief and b dabbing at my mouth.

"That blond tramp, I'll bet she's cause of this," Lucy said fiercely a took away the bloody handkerchief rinsed it at the sink.



"She was the cause, all right," I

Lucy inspected my mouth. "It's too bad," she murmured sympathetic and the moist handkerchief g pressed my lips. "But, Roy," she "Some of this blood doesn't wash She glanced up at me. "In fact, it' blood. It's lipstick." Her tone wa cusing. "You've got lipstick sme all over you again!"



"If you look carefully," I said, "y notice it's *your* lipstick."

Lucy came near, moved with a sigh into my arms. As I kissed h heard her contented murmur, "So So it is."

MARRIAGE '48

Continued from page 12

second husband screwed into a ribald grin. "Yes, my sweet," his whining, teasing voice whispered, "one out of three will be divorced within the year. And with your history, my darling Lilith, I'm betting that you're the one." His voice came so close that her hands flew up to cover her ears.

The little blonde stared. "I hope I haven't said anything wrong."

Lilith shook her head.

"I was just remarking what a beautiful place this church is. You only get married once in your life, so you may as well have it nice even if you're not formal. What do you think?"

"Yes, indeed," Lilith replied absently. So you only get married once in your life, she thought. Evidently the young bride had not read the morning paper.

"Now, take this suit." Skinny hands plucked at the white skirt. "I can have it dyed and wear it a couple of years, so it really wasn't such a big extravagance, but I'd have felt terrible to be married in anything but white." Looking at Lilith's gray suit, she blushed again. "I'm awful sorry, maybe I shouldn't have said that. I didn't mean—"

"It's quite all right. I couldn't wear white anyway. This isn't my first marriage."

Still the girl believed she had been tactless and, as penance, offered admiration. "That's a beautiful outfit you got on, though."

"It's really quite old."

"Old or new, good stuff's always good. Anyway it's okay for a wedding. You've got to have something old on—something old and something new, something borrowed and something blue. I got an old bra on," she confided, "and my garters are blue and I borrowed my prayer book. What about you?"

"My gloves," Lilith said, laughing inwardly but not wanting to disappoint the little bride. "Everything else is old."

"Oh, that's a shame. You must've been in a hurry, huh?"

"Well." Lilith rose and crushed the light out of her cigarette. "The parson's waiting."

The girl lifted her white skirt. She pulled off a blue silk garter. "Here, take this. It'll be borrowed and blue both."

"Oh, no, I couldn't."

"Why not? I don't need it." She rolled her stocking deftly. "Then you'll have everything."

LACE ruffled the edges of the garter, and hearts were painted on the bows. They were ugly and in bad taste, but Lilith was reminded of the pale blue ribbons on the imported slip she had worn at her first wedding, and of the borrowed handkerchief tucked in her cuff. At the second ceremony they had been slightly drunk, but she had a borrowed raincoat over her blue dress. No, thank you, not this time, she thought, I don't want that sort of luck. But she could not rebuke faith by refusing the girl's generosity. "Bless you," she said, swinging out her hand.

"I hope it brings you good luck."

A handshake was too cold. Lilith leaned over and touched her lips to the young cheek. "Same to you, dear."

As she left she felt lighter, younger and more hopeful than when she had gone into the Bride's Boudoir. Even the chintz seemed less appalling. The blue garter was small but she would not remove it even when she was on the staircase with the door closed between her and the other bride. The slight chafing pain reminded her, not unpleasantly, of the younger girl's faith and happiness. For the first time that day she forgot the item in the morning paper, forgot fear and failure. She ran down the stairs.

Helen Wozzeck did not know wheth she would ever get her blue garter bac but she did not care. Could there be better sign of good luck than a goo deed on your wedding day?

To Helen this day was sacred. Eve moment had importance. She h awakened early and gone to the windo nervously, for recent mornings had be misty. When the sky had begun to glo promising a fair day, she had breath more freely and said aloud to h cousin's wife, "Happy is the bride t sun shines on." The family had dash through teeming rain to her oldest siste wedding, and within the year her sist was dead.

She had waited for this since she w old enough to see the neighborho brides honored in white satin, but tl reality was different from the picture her mind. She had always expected be married at home with the girls fussi around, Ma cooking a regular Poli feast, Pa getting drunk on his own wi and neighbors and friends dancing night in a hired hall. Different this formal ceremony was, but not disa pointing. No girl could ask mo glamor than was shed by the Lit Church in the Vale. The great advanta to her practical mind was that it c no more than a wedding in some gri city church. It was nonsectarian so tl people of different religions could ha the sort of ceremonies their faith c manded, and spend as much or as lit as they could afford.

GIGGLING and fluttering their t fetas, the bridesmaids return Through the open door Helen heard t tenor singing Oh Promise Me. "Lea it open," she said, loving the music.

The bridesmaids hovered, solicito questioning. Was she nervous? Wo she like a glass of cold water? Did know Bill had arrived? What sort fellow was the best man? She was gra ful for their kindness but she wished th would stop chattering. This was a n ment for quiet, for music, for dedicati A million years had passed since she w like the bridesmaids, curious and hope about each new fellow.

What if she hadn't gone down Ocean Park with the gang that night October? What if Bill hadn't been the prowling, looking for a good da partner? What if he had seen Te first, or Lydia or Mary? Bill had t her more than once that Tessie was his type, nor Lydia, nor Mary either, that he had known before he asked name that she was for him. Sh Morgan's orchestra had been playi she would never forget the music, that moment when Bill stopped still the dance floor, looked down at her the changing light and sang with music, "Eyes of blue, I love you."

She was still in the mood, dreamy slightly damp, when Mildred Wozz panted into the room to say it was alm time, Helen had better step on it. " other wedding's over. So fast yo think it was a race and they were ma ing the horses."

"Did you see the orchid?" aske bridesmaid. "A real orchid."

"You could hardly tell the bride the maid apart, except for the colo the corsages. If I'd've been her, I' worn something more appropriate," marked Mildred.

In defense of that other bride H explained, "She couldn't wear white wasn't her first wedding."

"A divorcée?" cried Mildred.

"She didn't say."

"A divorcée," repeated Mildred, joying the word. "You can't fool m know the type."

If I'd've been divorced, believe me, ouldn't have the gall-to rush right up the altar with another fellow," the nger bridesmaid said.

ut the older maid who had become rant since her own sister had been ged to leave her no-good husband come back home with the kid, re- ked gently, "It mightn't be her fault. u can't tell, her husband might've n a bum."

That's what they all say." Scorn was fat in Mildred's voice. "Marry and orce, marry and divorce. You'd think y'd never gone to church and mised to be faithful. You know t Stan read in the paper this morn- He read it to me while I was fixing kfast. Thirty-three per cent of them get hitched this year will be sepa- d by next June. That's a third of marriages."

That's no way to be talking at a ding," said the younger bridesmaid. Can I help what it said in the paper? e big shots, professors and judges, made the statement. Believe me," Mildred was cut off by a rap at the r and a voice asking how soon they ld be ready.

WAS in a dream that Helen went own the stairs, found her cousin Stan zzeck, took his arm and walked be- l the maids toward the altar and Bill. had planned to watch everything, eep her impressions as clear as snap- s in her memory, but she saw it all ugh a mist and heard nothing except e silences which she had to fill until faltering "I do." Nor did she hear music until it was an echo in her d. This was when it was all over, n she was Mrs. William V. Snyder ready to write her new name in the rch register. Abruptly she became scious of faces and flowers, voices, a in her hand. Proud to add her own he list of glamorous brides who had married in the church, she paused ead the signatures of the couple se wedding had preceded hers: ry Hancock Fowler, M.D. Lilith D. k Fowler.

ilith D. Clark Fowler had not re- ed the borrowed garter, but Helen not worried. In her souvenir box garter was as good as a pair, and her nct knew that luck does not follow od deed if the cost is counted. .

he slight chafing pain which had re- ded Lilith of the garter had ceased so she forgot that she was wearing ething both blue and borrowed. This t strange. She was always absent- ded at her weddings. But she had also her gold cigarette case behind.

e discovered the loss when they were seated at a glass-topped table in the patio of a Beverly Hills restaurant. Someone had let the management know it was to be a wedding breakfast, and the table was heaped with waxy white tropical flowers smelling like mold. Lilith's pocketbook lay in her lap and when she started groping through it, the others watched.

"What've you lost?"

Lilith shrugged and spread her metal and silk trifles on the table. "I'm such a fool," she moaned. "I've lost my cigarette case again, probably in that bridal room."

"Are you sure you haven't used it since?" asked Henry. "You've been smoking constantly."

"Your cigarettes, darling. What'll I do about it, Henry?"

"Isn't it insured?" the best man asked.

"I don't want money, I want my cigarette case. It's a keepsake."

Henry was a perfect lamb, not at all like a husband. Instead of fussing at Lilith, he told the waiter to have a bottle of champagne opened for the others while he drove Lilith through the canyon and back to the Little Church in the Vale. They found the place bristling with activity, the curb lined with new, shiny, expensive cars. Henry drove around and around while Lilith dashed up the narrow staircase to the Bride's Boudoir. On her way she caught a glimpse of the church which had been decorated with wreaths and garlands of white flowers, and two-foot white candles on the altar.

For the second time that morning she burst into the Bride's Boudoir, and for the second time found it occupied. It was absurd of her to be startled at the sight of a bride in white satin and a veil, but for a stricken second she was reminded so acutely of her own first wedding that she seemed to be looking down a tunnel of the years at her own innocent past. Of course she had been nothing like this glowing brunette.

"I'm sorry to bother you," Lilith began, "but I think I've left something behind and, if you don't mind. . . ."

"No bother at all. Perhaps we can help you find it."

"It's a cigarette case. In the excitement of getting married, I must have forgotten it."

The bride noticed Lilith's white orchid. "Were you just married?"

"This morning."

The place was simply swarming with bridesmaids in starched blue organdy with amethyst ribbons and a rather stately maid of honor in amethyst organdy with blue ribbons. One of them found Lilith's cigarette case.

"No wonder you came back for it,"

"Ever notice how sometimes you can finish a whole page without understanding a thing you've read?" IRWIN CAPLAN

she said, noting the diamond-encrusted monogram.

Lilith shrugged as if gold and diamonds were beneath her notice. "I cherish it as a keepsake, the only decent gift I ever got from my second husband." And with a second "Good luck" tossed over her shoulder at the bride she was off.

"Second husband," laughed the maid of honor. "Then this must be her third."

"It's not at all surprising out here," said the elderly woman in a clipped New England voice that showed all too plainly her opinion of everything in the West.

"Oh, Mother," wailed the bride.

"I read it in the paper this morning," the little woman said. "It's not my own opinion at all, dear. Some very learned gentlemen, scholars and jurists, have issued a report, and statistics show that in this part of the country—"

A bridesmaid who had taken off her big hat to comb luscious auburn hair interrupted. "You're wrong, Mrs. McAndrews—"

"My dear, I read it this morning. I was so nervous I couldn't sleep and I took the paper back to bed with me—"

"I read it, too. It said that out of every three marriages in Los Angeles County this year, one would end in divorce within twelve months, but it also said the records in other parts of the country are worse, and that it's almost fifty per cent—"

"Not where I come from," said Mrs. McAndrews tartly.

The bride laughed. "She doesn't mean Michigan either. Mother still thinks Detroit's the Far West."

"I'm sorry if I've been rude, girls. But when I married Carol's father, everyone in Springfield thought I'd be hunting buffaloes and shooting Indians way out west in Michigan."

"She means Springfield, Massachusetts," explained the bride, still laughing. "They'd never even heard of Los Angeles then."

"Nor of divorce," said the auburn-haired bridesmaid.

"Yes, we'd heard of it," replied Mrs. McAndrews sweetly but still with some acerbity. "But we didn't consider it respectable."

The unimportant argument had unnerved her. Now that the wedding was just a few minutes off, Mrs. McAndrews lost a portion of her self-control. As soon as she felt the tears crowding into her eyes, she walked over to the window.

CAROL followed her mother and stood with her arm about the old lady's waist. "Don't go back East, Mother. Stay with us. There's an extra room in the house and we're going to keep it for you always, and call it Mother's Room. It was Davis's idea."

Mrs. McAndrews wiped her eyes with a fine handkerchief edged in handmade lace and scented with sachet. "No, dear, you won't want a mother-in-law hovering about you the first year. You know what Daddy always said when the boys got married. 'Mother,' he said, 'it's hard enough for the first year, parents only add to young people's difficulties, let them fight it out for themselves.' That's what your Daddy said and even though he's gone, I abide by his decisions. Besides, you've got family enough now without me."

Mrs. McAndrews moved away from the window, returned to the dressing table and powdered her nose.

Carol remained at the window. The Venetian blinds had been raised, and before her she saw the fertile panorama of the valley. Above the hills the sky was decorated with letters of smoke, spelling out her bridegroom's name. She smiled tenderly as though she saw the promise of eternal happiness in the heavens, although the actual message was this:

DEPENDABLE DAVIS — BEST PRICES 4 USED CARS

She had never expected to fall in love with a man in the automobile business. Back home in Detroit the boys at dancing school or country club parties had, half of them anyway, been sons and grandsons of the industry. Even the most distinguished names in the business, names better known throughout the world than the names of presidents or princes had failed to interest her. She had dreamed of a romantic lover, distinguished for his talents, a playwright, war correspondent, or a scientist whose researches have benefited the human race. At college she had studied journalism, then biology, then dramatics. When she had persuaded her mother to come to California for the winter instead of going as usual to Miami, she had been thinking of all the writers, composers and actors in Hollywood and Beverly Hills.

The used car business sounded even more sordid than the manufacturing of automobiles. She had laughed at her mother for using a letter of introduction from her uncle (who was an auto parts jobber) to one of his customers in Los Angeles. Dependable Davis indeed! Seeing the name written in the sky and hearing it endlessly on the radio had aroused her most snobbish instincts. Nevertheless, her mother had presented the letter and Mrs. Davis Barnes, Senior, had invited them for dinner. Carol had fought with her mother about accepting the invitation and had to be bribed with a new alligator bag and shoes before she would consent to go along.

THE next day when her mother tried to fulfill the promise, Carol had forgotten all about it. For she had met Davis Barnes, Junior. Later he confessed that he had not wanted to stay home that night and meet some drip whose uncle sold auto parts in Detroit. Both of them thought this terribly funny, and were never tired of repeating the story. That they had met in this sullen fashion and fallen immediately in love seemed nothing less than destiny. And Carol changed her mind about the Dependable Davis announcements on the radio and the skywriting which now seemed as thrilling as the sight of her lover's name on the back of a book or theater marquee.

They had fallen in love before th half knew each other, so that their e gagement had been a stormy perio They had quarreled frequently, vow never to see each other again and go as long as thirty-six hours without te phoning each other. Once she had start for Detroit, but Davis had waylaid h at the airport. This made it more r mantic to think about, and she was gl they had finished with their quarrels b fore the wedding. Now that the day h come, she felt as secure as an old marri woman. "Mrs. Barnes," she kept wh pering to herself, "Mrs. Davis Barn Junior."

THERE had been much talk and to sion between the two mothers. Ea had wanted to exhibit greater love a lavishness in celebrating the weddi The only proper place for a receptio Mrs. McAndrews thought, was t bride's home, but since this was twen five hundred miles away, it would ha been impractical to make them all tra so far. As a substitute she would ha liked to hire the ballroom of the hotel which she and Carol were staying, b Mrs. Barnes insisted that this was vulg Her home was spacious, her gardens d tinguished by a number of flower sh prizes. And most of the guests would friends of the Barneses anyway. She w in the end, not because her plan w more practical but because she was clubwoman, an executive accustomed getting her own way. She agreed to Carol's mother pay for the wine, fo and flowers.

These were lavish. The house and tables laid in the gardens were decora with vines and blossoms: silver platt were heaped with lobster and chick salads, with *petit fours*, salted nuts, i and slabs of wedding cake like pav blocks. All through the afternoon guests poured in, and several times Ca caught herself greeting waiters with automatic smile and phonograp phrases, "How do you do, so nice of y to come, of course I remember you p fectly."

Davis was an island completely s rounded by floating chiffons a diamond bracelets. No wonder they w

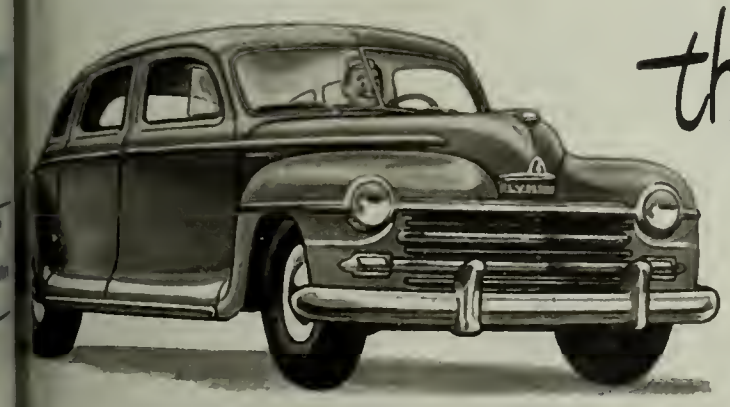
ying a new car is a big decision for a family. , in my little family, everybody has an equal e. That's why Mother and Johnnie went along me as we started out to find the one car that ld be the best car for us.



stopped first at the Plymouth dealer. That's use we know people who have Plymouths and tell us this is the greatest value car of them all. dealer showed us the new Plymouth Quality t and we had the facts and figures for accurate arisons. Then we took a ride.

"Johnnie went for the new Air Pillow Ride. 'Boy, are those Airfoam Cushions soft!' I could see that the seats were worth the slight extra cost. But all this comfort couldn't come from cushions alone. Those big Super-Cushion Tires must help, too—and they're standard equipment!

"Mother just sat back and enjoyed herself . . . kept saying, 'I feel so safe and secure.' But when we stopped, she got real practical. She saw the big luggage compartment. 'Why, the lid opens with a finger-touch,' she exclaimed. 'And it's so balanced that it *can't* fall down and crack you on the head.'

ce I do most of the driving in our family, I t say anything until I got behind the wheel. I got excited too. Why, this Plymouth was asiest-handling car I ever drove. The longer ve it, the better I liked it. After the ride, I d at Mother and I looked at Johnnie and w we had arrived at a verdict."

the Verdict

There's a lot of difference in low-priced cars and

PLYMOUTH

makes the difference!

Plymouth Builds Great Cars . . . Good Service Keeps Them Great. Your nearby Plymouth dealer will provide the service and factory-engineered parts to keep your present car in good condition while you're waiting for your new Plymouth. PLYMOUTH Division of CHRYSLER CORPORATION, Detroit 31, Mich.

PLYMOUTH BUILDS GREAT CARS

shiped him. Even in morning coat and striped trousers, which looked more than usually ridiculous in a sunny California garden, he was debonair. His hair was the color of mahogany, his greenish eyes red-flecked. He was rather short but athletically built with good shoulders and a narrow waist.

Carol despaired of ever getting through the forest of chiffons and artificial roses, and she went instead in search of her mother. Mrs. McAndrews smiled politely as she heard a guest remark, like fifty other guests that day, "But you haven't lost a daughter, my dear, you've gained a son."

Always in the same voice Mrs. McAndrews would reply, "I've got four sons in Michigan, and only one little girl."

Carol had to get away from that, too.

AT THE other end of the garden, guests were saying, "But you haven't lost a son, Mrs. Barnes, you've gained a daughter." Mrs. Barnes' smile showed off costly dental work but was nevertheless chill. She had no other child but Davis, and her love was such that her husband had frequently to beg her to temper it with good sense. Mr. Barnes was a sane man, and he had warned Carol, "Don't, for Heaven's sake, try to be a mother to him. He's had too much mother. You'll be happier in the end if you're tough with him."

At last she caught Davis' eye. He managed to disentangle himself from the dowagers, to catch up with Carol and to lead her to the shade garden where his mother grew her prize azaleas. Even here they were unable to kiss in privacy. A group of his fraternity brothers, gathered about a table decorated with glasses and bottles of various shapes, were celebrating his marriage in a song dedicated to the honor of the University of Southern California. Like counterpoint woven into this robust chorus sounded the lament of a lonely soprano.

It was the auburn-haired bridesmai who had discarded her hat and corsag and whose amethyst ribbons and blu organdy looked as if they had bee dunked in the swimming pool. The gi was unhappy about something, but he plight did not arouse much sympathy.

Davis left Carol, seized the girl an clapped his hand over her mouth. "Look Babe, this is a wedding, no place for funeral dirge."

She bit his hand. "Every woman' wedding is another one's funeral, th funeral of her heart." She turned bitterl to Carol. "Until you came along—"

The best man took Carol's arm "Don't mind Betsy, she's had too muc champagne."

"Champagne," scoffed Betsy, pullin herself free and pouring Scotch into he glass as lavishly as if it were win "champagne's for swimming."

The others laughed. Carol could no She had not known Betsy until she m Davis' crowd. When she had asked th girl to be her bridesmaid, she had n known anything about an old love affai How tragic, she thought to have love and lost Davis. High above the peppe trees and the eucalyptus, planes dec rated the sky with his name. Signboar on every boulevard, spot announcement on the radio made it impossible to forg that he worked and dwelt here in the cit What sorrow for one who had loved him

She knew she was not to blame fo Betsy's loss but she could not keep fro thinking of the lovelorn girl. Whe Davis kissed her the bridesmaid's shado fell between them, and when he whi pered that he loved her, she seemed t hear the disconsolate song. Shadow an echo did not frighten Carol so much a they oppressed her with the tragic sens of loss. She loved Davis so much tha the idea of losing him seemed less pai ful than the thought of death. Ho could a girl who had known his love g on living without it?

(To be continued next week)

THE GLASS CORNET

Continued from page 27

to wilt. Suddenly he withdrew the spinning cylinder, swinging it in a long, downward motion into the pit beneath him. The end opened out like a sleeve without a cuff. The searing hot roller was finished, ready to be snapped from the pipe, split and flattened. Krosteson swayed a little on the platform, as if spent with the tremendous effort he had exerted. Then, with a last heave of his big shoulders, he swung the finished cylinder upward again to the guide.

But it missed, catching him off balance. Frankie gasped as the cylinder crashed against the brickwork of the blowhole. A cascade of glass shattered over the platform and into the pit. Krosteson tottered; regained his balance. The crash of glass was followed by a momentary silence. Then shouts rang out along the platforms.

"Put 'er in the hole, Ole!"

"That last bottle hundred proof?"

Krosteson stood silently, gripping the iron blowpipe until his snapper came and took it from him. He swept a hand across his forehead, and the sweat streamed to the floor. Then he walked stolidly to the ice-water barrel. If he saw Frankie standing there, he gave no sign. He drank and replaced the tin cup on the block of ice in the barrel. He stared back at the men on the platforms. Talk of the accident stopped.

"Pop told me about the cornet," Frankie said hesitantly. "I'm—I'm sorry I couldn't go yesterday."

Krosteson nodded to him then. "That's all right, Frank." He turned, glancing at his gatherer shaping the neck and shoulder of his next cylinder on the iron marver. He drew a deep breath. H reached to the hook for his towel an mopped his face and shoulders.

"Where'd you get the cornet?" Frank asked.

"Fellow in Los Angeles—" came fro the muffled depths of the towel.

"It's—it's the model, isn't it?"

"That's right," Krosteson said.

"You're still going to make the gla one for me?" Frankie asked fearfully.

"That's right," Krosteson repeated.

There was no invitation to come ov and help. No suggestion that he cou come and watch. With sinking hea Frankie knew then that yesterday h father had said something that had hu Ole's feelings more than he let on. "I going to the library to study tonight," I said with quick resentment. "I'll be b May I?"

"The door's always open." Krost son's eyes were bloodshot, yet full kindliness. He marched stiffly out to t platform over the swing hole, taking t blowpipe from his gatherer's hands. H shoved the spinning ball of glass into t glory hole for the first heat.

WHEN Frankie came into Krost son's kitchen that evening, found it looking different. It was cle and orderly. On the table in the breakfa nook there was a new multiple-jet g burner, with an array of new tips f working glass. There was a pile of gla tubing in a wide assortment of sizes a lengths. And there were tools—sug tongs with wooden ends and with cutti edges, pincers, scissors, marking co pass, punties and blowing irons, and

small marver. Set up on the tile sink was a clay melting crucible.

But most conspicuous of all was the silver cornet, suspended by two strings from the electric fixture in the breakfast nook. The cornet hung evenly, just above Krosteson's eyes when he was seated. He could reach up and measure every part of it.

"Oh—what a beauty!" Frankie exclaimed.

"The best," Krosteson nodded. "B-flat, silver-plated." He motioned for Frankie to sit across from him at the table. He rubbed his mustache thoughtfully. "Does your father know where you are?"

"He thinks I'm at the library," Frankie answered.

"You know your father doesn't approve of me," Krosteson said. "He feels I'm a bad influence on you."

"Don't worry," Frankie said. "He just doesn't understand."

"It does worry me," Krosteson replied. "Your father's right."

Across the table under the warm glow of the light, Frankie could smell, mingled with Ole's pipe smoke, the strong aroma of whisky on his breath. "Pop thinks if you didn't make so much money, you wouldn't drink so much," he said.

Krosteson smiled. "I drink because I like it. It makes the glass come to life. Sometimes," he added wryly, "even an ill wind blows good." He pointed to the cornet above him. "Do you know the parts of the horn?"

"Sure," Frankie answered quickly. "That's the mouthpiece, these are the valves, this is a slide, and that's the bell, and—"

"Good," Krosteson interrupted him. "And you know a little music, too?"

"A little. I can read notes."

"Good," Krosteson said again. He studied Frankie thoughtfully. "You will tell me about music, and I will tell you about glass. I will begin first."

He turned the cornet this way and that, talking quietly as he examined the parts, shaking his head over the problem of the valve springs, measuring the cone from the mouthpiece to the slide of the first valve, and from the slide of the third valve to the bell. He said that any glass development of the spherical form could be attained by blowing and fashioning by hand. He explained that the form given to a mass of glass before it is drawn out will be kept by the finished cane or tube, no matter how small its section might be. "This didn't come from books," he said. "I learned by heart the words of the masters I worked under."

When Krosteson paused, Frankie cried, "Please go on!"

"Glass and steel will give their names to the twentieth century," Krosteson continued. He raised a caliper, taking the outside measurement of the bell of the cornet. When Frankie looked questioningly, he said, "I will blow this long cone at the factory, all in one piece. Later it can be cut." But in a little while, with a tired gesture, he laid his tools aside. "You'd best be getting along home now, hadn't you?" he asked.

"I guess so," Frankie said, "but I don't want to."

"There will be other nights," Krosteson said.

FOR almost a month, nightly, on his way to the library Frankie stopped for an hour or so with Krosteson. He seldom stayed longer, and was always careful to be home by nine o'clock. The cornet now, he guessed, was almost half finished. Whenever he thought of it, a deep excitement spread all through him. Maybe there would be notes from a glass cornet more beautiful than anybody ever heard before. He'd be the first one ever to blow them. He could hardly wait for Ole to begin joining the many sections of the instrument.

But Krosteson did not hurry. "Making a cornet is no different than making scientific apparatus," he said one night. "It takes time." He went on to explain the special properties of the soft glass tubing, telling why its working qualities and appearance did not change with heating in the flame. "It is the addition of feldspar up to ten per cent that cuts down devitrification and makes the glass workable," he said.

Frankie sat, face in hands, elbows on the table, listening raptly, yet fearfully.

"Remember now: sodium—potassium—calcium—aluminum—silicate—" Krosteson enumerated haltingly, "with a little manganese dioxide to take the green out." His breath was heavy with whisky, his face flushed.

Frankie could not put away the alarming thoughts. Krosteson had been losing more and more cylinders at the factory. The men in his gang were dissatisfied. They predicted Krosteson would fall into the swing hole if he didn't sober up. Whenever he went to the factory to watch, Frankie heard their talk, but there was nothing he could do. He bit his lip and kept silent, watching the glass tremble in Krosteson's hands.

As the days passed, while Frankie's enthusiasm for the glass cornet mounted, Krosteson's gradually diminished. In the evenings Frankie often found his friend sitting idly, staring at the beautifully fashioned parts flashing in the light of the flame. Sometimes he would be

Ruth Whitbeck Looks 20 Years Younger

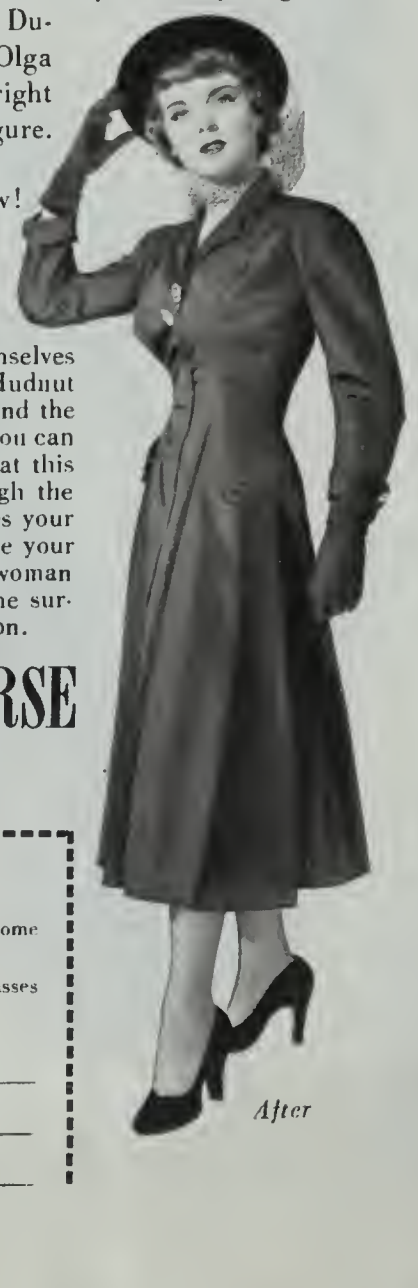
After

Before

Mrs. Ruth Whitbeck of Schenectady, New York, came to Ann Delafield's DuBarry Success School an overweight, middle-aged, plain, tired mother. A few weeks later she left a slender, young, stunning, energetic mother. What happened in those few weeks changed the looks and life of Mrs. Whitbeck. Today, her friends say she looks 20 years younger. Her ten-year-old daughter says she could go into the movies. Her husband says she's lovelier than when they married.

Your Invitation for a Free Make-up Treatment

Ann Delafield invites you to drop in any time at the Richard Hudnut Salon, 693 Fifth Avenue, for a free make-up treatment. You'll find it a delightful experience! Do come.



Olga Jensen is Going Places Now!

Before

You would never recognize today the shy, discouraged girl who came to Miss Delafield for help. Olga Jensen saw in herself only the poor complexion, imperfect features and unbalanced figure that made her neglected and unhappy. But Ann Delafield saw the possibility of fresh young charm.

A few short weeks at the DuBarry Success School and Olga Jensen emerged with a bright new beauty of face and figure. No more shy retirement for Olga – she's going places now!

After

Come to the Success School —or let it come to you!

Thousands of women and girls learn to make themselves over in the Success School classes at the Richard Hudnut Salon on Fifth Avenue, New York. If you can attend the Salon classes, by all means do so. But if you can't, you can follow the same methods taught by Ann Delafield at this famous School – follow them right at home through the DuBarry Success Course. It comes to you, analyzes your needs, shows you how to remodel your figure, style your hair becomingly, use make-up for glamour—be the woman you want to be. It's easy and it's fun. Results come surprisingly soon. Send the coupon for full information.

grinding in a fitting, silently and interminably turning the pieces. The piston cylinders were finished and the piston valves were in process of cutting and grinding from glass rod. Their fit in the cylinders was perfect. With a very light oil, Krosteson predicted, the valves with their thin steel springs would work like magic. But as one by one the mechanical problems were met and surmounted Frankie saw the gloom about his friend deepen.

He saw it in the unkempt condition of the house, in Krosteson's almost rock-like taciturnity, in the watery redness of his eyes, and in the frequency of his trips to the bedroom. He would rise from the table, and without explanation go away. Frankie would hear a drawer opened, and in a few minutes slide shut again.

When Krosteson returned, the odor of whisky would be stronger. Sometimes he would say what he was going to do next. But more often he would silently pick up the piece he had laid down and go on working.

With all his might Frankie endeavored to encourage him. He demonstrated the perfect cornet form, and explained the placing of the lips to the mouthpiece in the perfect embouchure. He wrote out the scales and explained about the sharps and flats. While Krosteson watched him, he strode up and down the kitchen, right elbow down, left arm vertical, performing miracles of double tonguing and tonsil shifting. He did imaginary swells, breaks and runs. He crescendoed and fortissimoed. And he soloed in the greatest Cornet Concert Band ever assembled in the whole world. Scraps of glass crackled under his shoes on the linoleum as he paced up and down. Krosteson watched him with melancholy eyes and shook his head.

IT WAS only a little while later, in the late spring, that the worst trouble came. Krosteson lost his contract. He was still in the glass factory, but another blower was put on the "big hole." The management notice said Ole Krosteson was now acting as "consultant." But everybody knew he was finished.

At supper one night, Mr. Williams was glossing over the items in the paper. Frankie listened in distracted silence.

"Frankie, you've got to eat more," his mother said. "Can't you hold your head up without resting it on your hands?"

"I don't feel like holding it up," Frankie said.

"You should see him at school," Esther informed them. "All he does is dope around."

Mr. Williams drummed his fingers on the cloth. "I'm told you're spending a lot of time hanging around the glass factory again. I thought I told you to stay away from there."

"I can't," Frankie said.

His father frowned. "A glass factory is no place for a boy to be spending his time. Give me one good reason—"

"A glass cornet," Esther said.

Frankie glared at her and rose from the table.

"So it's that again!" Mr. Williams frowned. "I thought that was all over and done with."

Frankie clenched his hands at his sides. "Ole Krosteson had it almost finished!" he cried. "Then he got fired. He hasn't touched it since—not for three whole weeks! I hope you're all satisfied!" He rushed out.

"Come back here," his father called, "and ask permission before you leave the table!"

But Frankie didn't stop, and he didn't care if he never came back. He sped in the direction of Krosteson's house. For days he had been battling against the dark premonition that something terrible was about to happen to the cornet. Krosteson had been vague and preoccupied, saying only that he worked on it sometimes late at night. Many tim when Frankie had stopped by in the ev nings, he had found him sleeping. Oth times the house was dark. Now the d termination to rescue the glass corn from his friend's possession ove whelmed him. It had been brewing his mind for days. With his fathe words, the decision had come instan neously.

Running his bicycle along the pore he leaped up the steps. Flinging hims into the house, he cried, "It's me, Ole Frankie!"

There was no time for Krosteson put down the pint bottle in his rig hand nor the glass cornet in his left.

"Don't break it!" Frankie crie "Please don't break it!" He put out l hand protectingly to the long, beautifu tapered cone of the horn. "I thought y might break it," he said trembling.

THE light over the sink flashed in t crystal flare of the bell as Krostes drew the cornet slightly aside. He h been leaning back, his elbows resting the drainboard. He straightened no and as he turned, Frankie saw that t mouthpiece was ground and fitted. T water key, with its chamois-covered p and thin wire spring, was on. Krostes fluttered the pistons with his fingers, a the coiled steel springs inside the shini cylinders danced up and down. "So y thought I broke it," he said.

The hollows in Krosteson's chee seemed suddenly to grow deeper. Fo full minute, perhaps, he stood motio less. Then he lifted the bottle and drai The liquid gurgled in his throat. coughed and wiped his mouth with t back of his hand. He said impassive "There is no angle at the bottom of t mouth cup where it curves into the bo The length of the tubing and the prop tions are exact, but"—and now he look directly into Frankie's eyes—"it m break like a bubble. It could sound l a fish horn."

"Is it—finished?" Frankie gasped.

"I was going to take hydrofluoric a and etch your name in scrollwork on bell," Krosteson said slowly.

"Yours, too?" Frankie said. "Ple —yours, too."

Krosteson walked unsteadily to the ble, picking up the polishing cham and slowly began rubbing the inst ment. "We'll see," he said. "Perhaps initial."

As Krosteson applied resinous pa to the bell for the etching, Frankie ticed other things in the room for first time. Two wickerwork suitcases in the corner by the cupboard. Acr them was flung an overcoat, and Kro son's black derby rested atop the he

Frankie was sure now that Ole l been going to break the cornet and tl leave. He thought frantically: *He co —he might—still do it!* In his pa he struggled against snatching the inst ment from Krosteson's hands and da ing from the house.

"This will take a long time," Kro son was saying. "The acid must eat in think you had best go home."

Frankie saw the beads of perspirat on his friend's forehead. Filled with f and apprehension he came slowly to table. He put out his hand. The qu gesture brought his fingers to the sl ing pistons. But as they touched glass, something inside him was relea It happened as sharply as the splitting a hot cylinder at the touch of a thumb. He withdrew his hand and eyes met Krosteson's steadfastly.

"I'm sorry I was afraid," he said. long—until tomorrow." Without wai for his friend to answer, he turned marched stiffly out of the room. It the same dignified way that Kroste walked when he marched out to the p form over the swing hole at the g factory. . . .

Frankie spent the night in a tortur

If you want the most delicious Salted Peanuts - say "PLANTERS"

If you'd like to find out how good salted peanuts can really be, just say "PLANTERS" at your favorite food store. You can use them scores of ways. For parties and motor trips—for salads and cookies—they're tops. Just the finest Virginia peanuts—tested by the electric eye—then toasted and salted as only Planters—the world's peanut experts for over 40 years—know how to do. Keep several cans handy always. They're Planterrific!

Also say PLANTERS for a different Peanut Butter—smoother and richer in true peanut flavor.

•

These PLANTERS products are also made in Toronto, and sold everywhere in Canada.

In Half-Pound Cans

region between sleep and terror. It was the blaze of heat from the glass furnace lighting up Krosteson as he swayed drunkenly on the platform over the swing hole that frightened him awake. There were voices in the kitchen.

"Let him sleep a little longer," his mother was saying.

"If he does, he'll be late for school," his father said. "After his behavior last night, I ought to punish him."

Esther said, "I'd like to see what would happen to me if I sneaked in a window."

FRANKIE leaped from the bed, hauling on his clothes. He ran from the bathroom, his hair and face still wet. "I don't want any breakfast," he cried. "I've got to find out something."

"Hold on here!" His father caught him by the pants.

"Ole nearly fell in the swing hole!" Frankie cried, struggling. "I've got to find out."

"You wake up!" His father's hand, whacking him soundly, brought him to a standstill. "Sit down and eat."

"Why, honey, if I forgot to kiss you goodby when I went to work this morning, it was purely an oversight! There's nothing I'd rather do, honey, than kiss you goodby—you know that!"

COLLIER'S — LEW FOLLETTE

The doorbell rang once, and then again. Mr. Williams demanded irritably, "Why is there a bunch of kids always here before we finish breakfast?"

"I'll go." Esther dashed up. "Can't people have friends?"

When Ole Krosteson stood in the kitchen door, Frankie leaped to his feet. His father sat speechless, wiping his mouth nervously with his napkin.

"It's—Mr. Krosteson," Esther gulped.

He wore a stiff high collar and a dark suit. He stood uncomfortably, with heavy dignity, grasping the hard brim of his derby hat. Cradled in one arm were two packages wrapped in newspapers. "I only stopped to leave these for Frank," he said. He held out the parcels stiffly. "I am going away." For a moment he looked at them almost humbly. "And I wanted to say goodby."

"Gosh!" Frankie cried, taking the packages from him. "Gosh all hemlock!" He didn't have to get the feeling of the tubing under the papers to know that Ole had brought the cornets, both of them.

"Look! Look!" he cried, tearing away the papers. He laid the glass cornet tenderly side by side with the silver one on the table.

"Oh!" Esther gasped. "It's—it's beautiful!"

Unable to speak, Frankie pointed to his name etched on the bell, and to the faint initials, "O.K.," so tiny they were almost invisible among the scrollwork.

"Say!" Mr. Williams exclaimed in admiration. "That's a wonderful piece of work you've done there, Ole."

"I told your boy I'd make him one," Krosteson said. "He had his heart set on it."

"But—the silver one, too?" Frankie heard his own voice crack upward.

"For practice," Krosteson said. "With the other one it's a question. You understand."

"Ole, I'd like to pay you for this silver one," Mr. Williams said. "The glass one is between you and the boy, but I'd like to—well—I don't feel right—"

Frankie saw Krosteson take the full measure of his father. "You can do me a big favor if you will take care of a few things I left in my house," he said gently. "The rent is paid. Maybe the boy would like the tools I used to make the horn." He sighed. "I am leaving suddenly."

"Where you headed for?" Mr. Williams asked.

"Lovell. There's a good factory there. They have wanted me to come." Ole Krosteson rubbed the crown of his derby quietly. "I think it's time now for me to go."

"We'll take care of your house," Mrs. Williams said.

Frankie pressed the mouthpiece of the glass cornet to his lips twice and put it down again. He held the instrument lovingly against his breast. He wanted desperately to tell Ole Krosteson of the joy he felt, yet in front of everybody, he couldn't.

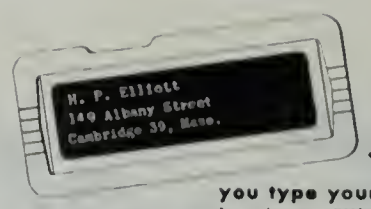
"Blow it," Krosteson said. And Frankie saw that his friend's eyes were wet.

He moved to the door, the glass cornet to his lips, the bell tilted up a little. Outside on the porch he poised himself, right elbow down, left arm vertical, tube steady.

KROSTESON stood beside him. The others crowded quietly around him. He took a deep breath. The kids passing on their way to school stopped to watch. Krosteson nodded. A long look passed between them.

He had only his practice on the bugle to guide him. Closing his eyes, he blew the bugle call, as he had blown it a hundred times in the eucalyptus tree row and on the oil derricks.

The notes sprang from the bell with startling clarity. Excitedly then, unable to take his lips away, he played separate notes, pressing first one piston down, and then another, working on the combinations, blowing notes diminuendo, crescendo and sustained. Sometimes they spluttered and missed, sometimes they went good. Cheers and boos and handclapping came from the sidewalk. He blew until he was drained of wind and sound, until he wilted over the glass valves.



"Is good," Krosteson said softly. "Blow again." He turned his back on them and marched to his car at the curb. The wicker suitcases were piled in back. The starter ground loudly and a cloud of smoke billowed from the exhaust.

"I didn't thank him!" Frankie cried, tearing the horn from his lips. "I've got to thank him!"

"Play that bugle call again!" his father commanded. "He understands. Play it loud!"

He pressed the horn to his lips again and blew with all his might as the car at the curb shot forward. But his wind was exhausted. He held the cornet clutched against his chest and looked at his father helplessly. He saw his father start to speak, then change his mind. Together, silently, they watched Krosteson's car disappear from sight. And in that instant, Frankie knew his father finally understood about the cornet, and about a lot of things he had been sort of wrong on until now.

THE WORLD'S BIGGEST STORE

Continued from page 19

runs of refrigerators, washing machines and other goods in which the only change from the regular models is the use of the Macy label. Macy's drug compounds sometimes sell for as little as a fourth of the cost of other similar merchandise.

As the world's largest retailing importers, Macy's operates a foreign organization with offices or representatives in sixteen cities all over the world. Their job is to line up merchandise for Macy buyers and those of certain other stores. Macy foreign offices frequently turn up minor miracles of their own, as when the expanded U.S. Army, threatened by a general outbreak of winter head colds, suddenly discovered itself virtually without handkerchiefs. Macy's cabled its Belfast office, and a million linen handkerchiefs were woven to strict specifications, stitched and sent on their way to sniffling selectees within three weeks.

New Modes in Japanese Pottery

Macy's foreign offices have made important contributions to trade. In Japan a Macy's man is credited with initiating the vast crockery industry there by teaching the Japs how to make dishes Macy's would buy. In Czechoslovakia a luncheon tablecloth and matching napkin industry was established at Macy's behest following World War I. When the tablecloth business languished Macy's switched the Czechs to profitable rug weaving.

When the war began, most of Macy's European offices were engulfed by Hitler but not before faithful Macy employees had buried records and equipment that stayed underground for the duration. Though it could do no business, a proud and ancient Macy's employee defied the Nazis and kept the Paris office open during the entire German occupation. A French vintner was loading 37 cases of wine ordered by Macy's when he heard the Nazi guns outside the city. He took the wine to his farm and holed it up behind a false wall in his cellar. At war's end the wine was unearthed and shipped to Macy's with an explanatory letter of apology for the four years' delay.

"I'll bet Macy's thought the whole 37 cases were lost," the vintner happily said.

When Macy buyers scurried back to Europe after the war they had to sleep in bombed-out houses, and forage for gasoline and food while they sniffed the air for bargains.

Macy men were the first postwar commercial travelers into Hungary, Austria and Poland, and in Communist-fringe countries they are now subject to the harassing tactics of the Soviets. Recently a Macy man, operating in a Communist-dominated Central European country, was required to go to Paris. In his absence his apartment was confiscated, a disaster of appalling proportions in some bombed-out cities. It seemed certain he would spend the next year in a cave.

But Macy men are tough and resourceful. This one composed a blistering telegram to the Communist mayor of his city, denouncing that official boldly and demanding the return of the apartment. Although his case seemed hopeless, he nevertheless insisted that an immediate answer be sent to Macy's Paris cable address. The response was prompt and apologetic. The mayor was sorry such a mistake had been made. The malefactor would be punished; when the injured party returned home his apartment would be ready. The Macy man was happy but aghast until he looked again at the message. Macy's Paris cable address is *Red Star*.

Though Macy's probably gets one of the lowest proportions of customer complaints of any United States store, the total volume (260,000 a year) and variety are unmatched anywhere. Macy's candidly acknowledges its errors and even takes full-page newspaper ads humbly to admit its shame. Invariably the ads get a sympathetic response: "Dear Macy's, You're not as bad as you say . . ."

Some mix-ups stem from complaints. A New Jersey householder ordered a flagpole. When it failed to arrive he canceled his order. Then he had one erected on his front yard by a local contractor. Notified of the cancellation a Macy delivery man arrived on the scene in the householder's absence, resolutely dug up the flagpole and carted it to Macy's. During the war a group of enterprising G.I.s, stuck on a by-passed Pacific atoll, ordered a set of technical books from Macy's. When they eagerly opened the package it contained several dozen pantie-and-bra sets, and no books.

There are a few Macy customers who are immune to just ordinary snafu. To them everything happens. The harrowing record of one of these, Author Frederic Van de Water, goes back 12 years. From his farm in Vermont Mr. Van de Water ordered a fruit basket for a friend. Macy's delivered it and then, for no discoverable reason, demanded the friend return it. When Mr. Van de Water wanted to surprise a relative with an anniversary gift, Macy's telephoned the relative to consult about the present, thereby reducing the essential element of surprise.

The store consistently refused to ship wine to him in Vermont, maintaining, despite his protests, that it was against the law, which it wasn't. One Christmas it sent books he ordered for a friend to him instead, carefully enclosing the cards he had written. Ultimately the friend got two sets of books and two sets of cards. A birthday gift for his brother was not delivered. Several defective glasses were in one order. When he sent them back, Mr. Van de Water was given others of a completely different style.

After these misadventures Macy's realized something had to be done. A special clerk was appointed to handle Mr. Van de Water's business. A supply of envelopes addressed to this clerk was printed and labeled *Important!* These were forwarded to Mr. Van de Water with a long and appealing letter explaining that everything would be different now. He was greatly moved. Then he looked at the special envelopes. They were printed upside down.

A Pinch Hitter for Santa Claus

Macy's will go to some lengths to rectify an error. Once a Californian wrote to order a Christmas gift for his grandchild in Boston. Instead it was sent to the Californian, who telephoned the store from Los Angeles on Christmas Eve in something of a pet. A personnel canvass turned up a Macy executive who was going to Boston for the holidays. The gift was duplicated and the executive delivered it personally, beating Santa Claus by a hair.

For years no single store had touched Macy's sales volume. Last year it exceeded $170,000,000. But not long ago Marshall Field in Chicago threw Macy executives into a tizzy by advertising itself as the world's largest. Marshall Field claimed 2,046,000 square feet. Macy's figures showed 2,012,000 square feet, a measly, humiliating 34,000 feet less. So Macy's sent surveyors to the four corners of the store to measure every inch.

While the publicity department held its breath they measured and remeasured interminably. Finally they brought in the news. With recent improvements in

AH-H-H!
...COMFORT!

...and here's the secret of buying comfort in shoes!

9 OUT OF 10 MEN who've switched to Ward Hill Shoes say Ward Hill Shoes... *Fit better ...Feel more comfortable...Break in more easily...* than the other brands they've worn previously.*

HERE ARE 3 PRACTICAL TIPS FOR GETTING SHOE COMFORT!

1. Wear the same weight sock you wear regularly, when you try on shoes.
2. Let your salesman help you decide your size. Don't rush.
3. Choose a shoe styled for *comfort*...like Ward Hill.

and planned, Macy's had 2,132,000 square feet! A diplomatic note was then dispatched to Marshall Field's suggesting the impropriety of exaggerated claims on the size of their Chicago store.

Macy's spends $3,000,000 a year on advertising and promotion—some of which is humorous, much of which is penitent, and all of it sells. Sometimes Macy's ads create minor riots and at least fifty times a year the store's reserve police must be called out to hold eager customers in check. To give everybody a chance, lines are formed. It is not unusual, as was the case during a bathing-suit sale this summer when 10,000 buyers stormed the store, for a block-long line to continue from morning until night.

Macy's unusual advertising policies are as old as the store. When Founder Macy had hardly more than two shoestrings to his name he was challenging all comers in bold ads. During the first year advertising cost $2,800, proportionately twice as much as is spent today.

The Pixie Touch in Copy Writing

Some of today's Macy ads read like the work of pixies, a calculated and effective style perfected in the early 1920s by Poet-Author Margaret Fishback, then a Macy copy writer. One tiny and typical Fishback ad offered a cake tester two feet long. "This cake tester will come in handy," she wrote, "the next time you bake a cake two feet high."

The ad pulled 2,200 mail orders, 1,700 telephone orders and a total of 19,000 sales from as far away as Alaska. The store's stock of 350 cake testers was sold in a few minutes; the rest of the orders had to be filled at double the cost, resulting in a loss on every sale. But Macy's loved it. A new advertising style was being born.

Now Macy's advertising stunts range from a flying trip to St. Louis for several planeloads of cotton cloth—with advertising copy prepared on the flight home—to spending $2,000 to explain a mistake made in engraving initials on a child's silver cup.

The store was started in 1858 by a one-time sailor, Rowland H. Macy, who picked as his first top employee-executive a woman, Margaret Getchell. Today, women predominate on the executive staff. Today, also, Macy's in New York is only one unit of R. H. Macy and Company, Inc. This firm does a $300,000,000-plus annual volume of business. It includes stores in four cities besides New York with 14 branches operating [illegible] building, and New York's radio station WOR.

Macy's loves to rescue a customer in distress and during the war appointed comely blond personal shopper Vic[illegible] Adams—whose business name is Bet[illegible] Mason—to solve problems of men in the armed forces throughout the world. Men bound overseas entrusted her with long lists of complicated gift instructions, sentimental notes to go with gifts and enough cash to cover anniversaries for the duration.

At the peak of the war Miss Mason received 100 orders a day from overseas. Cruisers and battleships pulling into New York gave orphan parties and Macy's shoppers would turn up on 24 hours' notice with several hundred presents purchased (not always from Macy's) and wrapped. The crew of the U.S.S. Argonne sent its entire $8,730 Christmas list in 104 typewritten pages to Miss Mason. Scores of overseas weddings were outfitted. Notified Wednesday of a Bermuda wedding Saturday, Macy's got the bride's outfit there on time.

Never for a moment does Macy's stop selling. Nowhere is this more evident than among the scores of telephone operators who do Macy's phone business. Customers who call up to buy a couple of sheets or some bath salts are inspired to order kiddy cars and fancy groceries as well. Easiest to sell, say crack operators, are people who call up with complaints. One man, who called up in a blind fury because instead of the bedroom set he had ordered Macy's had delivered an infant's toilet seat, found himself the possessor of half a dozen shirts and a year's supply of underwear.

Macy's has been criticized for retaining as its symbol the famed red star which is also the insigne of the Red Army. Macy's picked it in 1862. The Red Army adopted it in 1918, with only a variation—a superimposed hammer and sickle in gold. But as the emblem of a highly successful capitalistic enterprise Macy's thinks it causes the Red Army more embarrassment than the Communists do the store.

"Anyhow," an executive remarked recently, "the red star belongs to Macy's. We used it first, and we think we'll have it last."

THE END

HOW THE REDS SNATCHED HENRY WALLACE

Continued from page 15

capitalism had a place in the world. All this was done in the hope of expediting and increasing Lend-Lease shipments to Russia.

Stachel raised the question of whether Wallace was to be backed "at all costs." He argued that further clarification was essential, and that action should be postponed until the orders from Moscow could be more clearly interpreted. The comrades were also concerned about Wallace's reported association with Nicholas Roerich, the so-called Guru. The Guru; letters were already being talked about in Washington, and we had received complete reports of Wallace's mystical adventures from our excellent sources of information at the capital. The Communist leaders, to my knowledge, had had certain underground relationships with Nicholas Roerich, and they were of the opinion that any admiration of his occult powers was a sign of irresponsibility.

Assurances of Soviet Support

After a few hours this worried group of comrades adjourned, and another meeting was called for three days later. Meanwhile Stachel and Bittelman were to obtain from Hans Berger a clarification of the Kremlin directive.

At this second meeting, held in a hall near the Twelfth Street headquarters, there were present all who had attended the earlier session. In addition, there were Gil Green, then head of the New York State Communist Organization, and Roy Hudson, then head of the party's labor division. Stachel and Bittelman reported that the party need have no further doubts about Wallace; that Berger had said that he was to be supported to the limit and at all costs. It was at this meeting that Bittelman made the statement that the Soviet Union would support Wallace. "For us," he said, "this is decisive."

Bittelman's statement settled everything. Immediately every man present became an enthusiastic Wallaceite. Earl Browder led off with a brief speech urging full and unrestrained support for the Iowan. He was followed by Robert Minor in a similar vein. Minor, who had always said that he would stand or fall with Browder, and who finally fell with him when Browder was deposed as party secretary, took occasion to hail Browder as "the greatest Marxist in the Western Hemisphere," a description that Bittelman greeted with a sly and prophetic smile. Other speakers pointed out that Wallace had "ever been a sincere friend of the Soviet Union."

As far as I know, Wallace was not told that he had been adopted as the darling of the comrades. Later the Communists had their moments of concern, for Wallace soon became, in his own eyes at least, considerably more than a mere successor to Roosevelt. A constant stream of reports on what Wallace was doing and thinking poured into Communist National Headquarters.

One report, transmitted to our Board by Eugene Dennis, said, "Wallace blows hot and cold; when Senator Kilgore, for example, has seen him, he is one way, but when our members get to him he is our way." Actually, the Communists didn't care two whoops about Wallace's views on the domestic situation. Their only real concern was that he should never falter in his support of Russia's foreign policy.

Nearly all of the public sentiment which developed in favor of Wallace during the few weeks prior to the Democratic Convention of 1944 was fomented and organized by the Communists, working under direct orders from Moscow.

Both before the Hitler-Stalin pact and in the period which followed Pearl Harbor, when the Russians were greeting the capitalistic Americans as brothers-in-arms, the party had been very busy. We had strengthened our position in many labor unions, and had gained a controlling voice in several. We had formed a large number of front organizations, and had infiltrated law and other professional groups and community associations. We had gained a foothold in Democratic party organizations in almost every state, and were particularly strong in Ohio and New York, and in California, too, where yeoman service had been performed by the Hollywood party unit of movie actors, writers, producers and directors. Wallace was our front man, whether he knew it or not.

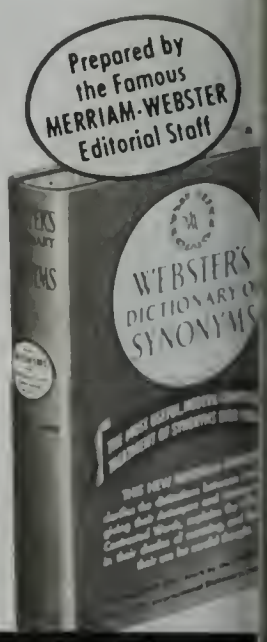
From all of these organizations came a flood of demands to the Democrats, inspired by the Communist members, for Wallace as Roosevelt's running mate. *The Daily Worker,* source of directives to Communists operating inside other groups, gave impetus to the drive. Earl Browder told me that one editorial alone, published on July 12, 1944, had caused 20,000 letters to be written in two days to Democratic politicians, all demanding the nomination of Wallace.

Every Communist in the country recognized this editorial directive as an urgent order to get to work. They immediately began to stimulate their neighbors, associates and fellow workers to write or wire on Wallace's behalf. Nor were the farmers and the people of the small towns neglected. The rural campaign was placed under the direction of an underground agent of the Soviet Union who had been ordered deported in 1936, but was still here eight years later because Russia, where he was born, had refused to accept him. They did not work or write as Communists, mind you. Just as Americans—loyal Americans.

Minority Rule by Deceit

The Communist system of "stirring up" or "mobilizing" the people is one of the most effective methods of minority control of public opinion ever developed. Under the persuasion of Communist agents, thousands of American men and women raised their voices on behalf of issues to which, if they knew the truth, they would be opposed. I worked for the party in Chicago for three years, and we used this technique constantly. I saw clearly how it operated to deceive the American people and, as William Z. Foster, head of the American Communist party, said, "to frighten cowardly politicians."

Every Communist district leader in the United States receives *The Daily Worker* by air mail. He reads it with great care and attention. If he finds an editorial which embodies a command, such as the "suggestion" which I have already mentioned, he immediately calls his staff together, including the comrades in charge of trade unions, professions, and so on. Forthwith they flood Washington with wires and letters. Postcards are prepared on mimeographing machines for those who do not write easily.



The Communists explained away the defeat of Wallace by stating they had been mainly interested in Roosevelt's reelection. They were not dissatisfied with what they had accomplished. And they at once let Wallace know that they had supported him to the limit of their strength. This they did by editorials and articles in *The Daily Worker* and

er publications. These were called to llace's attention by Communists and ow travelers close to him. None re- rted that he showed any displeasure.

When the confirmation of Wallace as cretary of Commerce was before the nate early in 1945, the Communist ganization went all out for him to an n greater extent than it had before. It was during this campaign that Alex- der Trachtenberg told a meeting of National Board that "we are taking llace into custody." A few days er Trachtenberg made this statement, o Washington comrades who held high itions in the government told us that d progress was being made in winning llace's confidence.

Twice during the year that followed llace's confirmation as Secretary of mmerce, the Soviet Union gave evi- nce of its high regard for him. In ril, 1945, Jacques Duclos, General retary of the French Communist ty and known in secret Communist les as "the voice of Moscow to the st," published his famous article cking Earl Browder, which resulted Browder losing his job as General retary of the American party.

n denouncing Browder for taking o complacent view of "the trusts," clos praised Wallace thus: "It is wn that the former Vice-President of United States, Henry Wallace, has ounced their evil doings and their national policy."

he second public assurance that scow had not changed its mind about lace was in the nature of a rebuke he American comrades. In Septem- 1946, during a speech at Madison ure Garden, Wallace remarked that hought the Soviet Union should try understand" the United States. He promptly booed, to his great be- erment.

n its issue of September 15th, *The y Worker* sharply criticized Wallace. the next day, September 16th, the sian newspaper *Pravda* praised Wal- for having detected and opposed erica's "imperialistic designs." On ember 17th, several Soviet leaders gized Wallace over the radio.

n the 19th of September, William Z. er spoke highly of Wallace at a meet- n Madison Square Garden, and the munist audience became wildly en- iastic. Throughout the evening every mention of Wallace's name was wildly cheered. And at the plenum of the National Committee, held in December, American Communist leaders beat their breasts in groveling apology for the "incorrect and harmful" editorial in *The Daily Worker*. Eugene Dennis said with great feeling that it was "a serious error" and "an unpardonable mistake."

This was the nearest that Wallace ever came to having trouble with the Communists: since then there have been no signs of a rift.

The first official mention of a third party was made by William Z. Foster at a secret meeting of the National Committee on June 18-20, 1945. At that time Foster said the party's goal was a Farmer-Labor party, although the expression was deleted from his published remarks.

Soon after the Potsdam Conference, the Communists came into the open with their plans, and Wallace's ambitions and Communist schemes began gradually to coincide. In December, 1946, an editorial in *Political Affairs* urged the creation of "a people's party which will include the Communists." This editorial singled out Wallace as one who had "contributed a great deal toward checking the G.O.P. advance."

On December 29, 1947, Wallace announced that he would run for President as an independent candidate.

Another voice from the Soviet Union now began to be heard in behalf of Wallace. *The New Times*, published in Moscow as a weekly supplement to the newspaper *Trud*, is circulated in this country in a well-prepared English translation. Copies go to every member of *The Daily Worker* staff, and to every leading Communist. They search it eagerly and thoroughly for directives. They found an important one in the issue of January 21, 1948—a leading article praising Wallace, advocating his election as President and proclaiming the Progressive Citizens of America to be the sole remaining "progressive political organization in the United States."

The Progressive Citizens of America was Communist controlled from the beginning, and several prominent citizens who had been induced to join resigned as soon as they found what they had got into. The National Citizens Political Action Committee and the Independent Committee of the Arts, Sciences and Professions, which merged to form the P.C.A., were likewise Communist line organizations. In fact, the Independent Committee was conceived in my office at *The Daily Worker*. The work of organization was largely done by fellow travelers, and the party didn't appear at all.

Every American who has read the newspapers or listened to the radio should know what happened at the nominating convention of the Progressive party in Philadelphia last July, when the job of "taking Wallace into custody" was completed. The Wallace campaign has been a masterpiece of Communist chicanery and shenanigans. Through it all has moved with stately tread the figure of Henry Wallace, his graying hair tousled, his speeches and public statements filled with confusion, misinformation and pious platitudes. He is securely confident that he is destined to be the leader of America. And even an occasional Communist will tell you, wonderingly, that he hasn't the slightest idea he is being used. I know. I helped to take Henry into custody.

This is the first of a series of articles on the activities of the Communist party of the United States. The second article will appear in an early issue.

OUNCE OF PREVENTION

NECESSARY EVILS

Mama, Mama, stop and think
What's beneath your kitchen sink.
Disinfectants, lye and bleach,
All within your tadpole's reach?
Nice for grimy clothes and tubs,
Drains and floors, but not for cubs!
Lock them up or perch them where
Snooks can't bag them from a chair.

SHORT SHORT

Duffy Takes A Hand

By JEROME BRONDFIEL

DUFFY, the doorman at Eight Eighty One, touched his cap respectfully as Mrs. Roland Gardner approached. "I'd like to talk to you for a moment, Duffy," she said.

"Yes, ma'am," Duffy answered politely. A tall man, he inclined his head slightly as she spoke.

"I have a request to make of you," she began. "It may surprise you, but it's important, and I want you to treat it with strictest confidence—"

"Of course, ma'am."

She shifted the mink scarf on her shoulder. "I'm afraid Ginny has been seeing too much of a certain young man. I've taken steps to put an end to the situation but it's going to take a little time. I'm quite sure you know who I mean."

"I believe I do, ma'am."

"Good. Now, whenever possible I want to know when she is seeing him. I don't think he'll be calling for her but he'll probably be bringing her home. That's where you come in, Duffy. I want you to let me know whenever you see him here." She flashed a quick, frozen smile. "I'm going to count on you, Duffy."

"I understand, ma'am," he said easily.

"That's fine." She stepped into the foyer.

Duffy resumed his post, watching the cars and the taxis stream past on Park Avenue. He wasn't the least bit surprised. After twenty-five years on the job there was little he didn't know about the eddying human currents of Eight Eighty One, nor was there anything that could startle him. It wasn't the first time someone had dragged him into a personal intrigue.

Usually Duffy could roll with the punch but this time he felt it where it hurt. He lifted his cap and ran his fingers contemplatively through his curly gray hair. A wonderful kid. Ginny Gardner. He wondered how someone like Mrs. Roland Gardner rated a daughter like that.

Duffy could remember when they'd brought her home from the hospital twenty years ago. He'd watched her grow—take her first steps—ride off to Central Park on her first bike. He'd given her pennies for her bank. Yes, there'd even been a time when he'd spanked her for sticking chewing gum all over the elevator.

She'd grown up fast, all right, and first thing he knew she was introducing him to friends from finishing school, and to her dates. Duffy liked to imagine he could see outright affection in her lovely blue eyes when she'd present him as "one of the swellest guys in the world," or her "favorite Dutch uncle."

The night she made her debut she had planted a kiss on his cheek as she swept out, a vision in white and ice blue. His Ginny—and now her mother was doing her best to keep her from being happy. Not only that but she expected him to help—

Knowing Laura Gardner, Duffy could understand why young Tom Kellogg wasn't very eligible as a prospective son-in-law. He had no family pedigree, no money, no entree to the better circles. And a middle-rung job with an air line, so far as Laura Gardner was concerned, wasn't an acceptable substitute for any of them.

But they were wonderful kids, those two, and Duffy got a great kick out of watching them walk over to Madison or Lexington for a bus or subway on their way to the movies or theater. (Balcony seats.) Seldom a cab. Once in a while he was able to borrow his brother's venerable convertible for something special like a drive in the country.

No, Duffy wouldn't worry about them making a go of it. A burning resentment began to build up within him as he considered Laura Gardner's request. It was all wrong, shamefully wrong, and he wished he could somehow take a silent hand in protest.

Two weeks later, shortly after noon on a Saturday, she approached him again. "Anything, Duffy?"

He shook his head. "Nothing, ma'am."

"She's been seeing him. I know she has."

"Perhaps they've been meeting someplace."

"Quite likely." She opened her purse. "You'll report to me, however," she said, handing him a folded bill.

With his infallible manners he did not look at it, putting it immediately into his pocket. "Of course, ma'am. Thank you."

After she had stepped into her taxi Duffy took a look at the twice-folded bill. It was a twenty. He smiled faintly. She really wanted to be sure of his co-operation.

IT WAS perhaps a half hour later when Duffy saw the convertible pull around the corner and park at the end of the building. Tom Kellogg was alone. Then Duffy saw Ginny coming out of the building. She had a large suitcase in one hand and a hatbox in the other. Duffy sprang forward to help her, but she smiled and shook her head, and Duffy immediately realized why.

"I'll get 'em, Duffy," Tom was saying as he got out of the car.

"So—" Duffy said, looking at them sharply.

"We're eloping, Duffy," Ginny said simply, "but you haven't seen us at all." Then with a quick shake of her head she said, "You don't think it's wrong, do you?"

"You're asking me?" Duffy said softly.

She nodded. Tom had slipped his hand through her arm, as though he wanted to get going.

Duffy didn't have to think very long or hard. "It's wonderful," he said. "You can't miss."

She gave a tiny chirp of delight and Kellog grinned. "Thanks, Duffy," she said.

"You won't have any trouble?" he blurted.

"Trouble?" Her voice rose on the word. "Getting married—or with Mother?"

"Both, now that you mention it."

"I think I'm old enough and wise enough t know what I'm doing," she said. "And we don need a waiting period where we're going to be mar ried." She looked up at Tom. "We're sorry Mother is hurt by this but there'll be nothing sh can do about it. Nothing." There was a finalit about it that told Duffy all he needed to know.

"Bless you both," he said. And then, in a bur of inspiration that left him tingling slightly, Duff thought of something. "Ginny, darling," he sai "I'd feel very proud and pleased if"—he smile broadly—"if you'll let me be the first to give you wedding present."

"Oh, Duffy," she began. But he'd already reache for the twenty-dollar bill. "Get something real ni —something you'll have around for a long time t remember me, sorta." He took her hand ar pressed the folded bill into it. For one bad secor Duffy thought she might refuse it, but she was tc genuinely decent and considerate.

"Thanks, so much, Duffy," she said softly. "It so sweet of you."

Then they were gone and Duffy watched the c travel south on Park. Before it got out of sight l began to smile to himself. So Laura Gardn wanted him to turn them in, did she? Slipped hi a twenty to make sure. Duffy chuckled as h began to look forward to the whopping big lie he be telling. ★★

THE WEDDING PRESENT

Continued from page 17

have been, too, because the farm he's on—not that anyone ever farmed it—is called Baviaansfontein—baboon spring.

"The spring's just near his hut, that's where he gets his water. The farm behind is called Baviaansberg. Baboon Mountain is a good name for it, too, because most of it is in the vertical plane and fine for baboons and rock rabbits, and a few klipspringer and the like. A wild place, indeed, but beautiful with protea shrubs and ferns, with flowers and wild birds."

"Birds," Mr. Herbert said, "birds."

"Some people like them," the third man said.

"I do," Herbert said. "A nice plump partridge, now that takes some beating." He made a little tight, round gesture in front of his stomach to describe a partridge's breast, and said, "And hung just right. Not too high and not too fresh. An' brown with a strip of bacon over it, and nice fresh water cress and mashed potato."

THE barman said, "Baboons, nothing but talk of baboons in here now. Baboons, bavians, *bobbejaans*—English, *Afrikaans*—it's the same every night and I'm sick of it. Just because a man goes to live in the berg."

"There's lots of men living in caves in Table Mountain. Bergies, they call 'em. And women too." Mr. Herbert turned to the third man. "My name's 'Erbert," he said.

"And mine is Clarke," said the other.

"Clarke? Any relation—?"

"Yes. That's why I'm here. I'm his uncle."

"Very tragic," I said. "I mean it must be terrible for the family."

"I don't know," Mr. Clarke said. "I really don't know. It might be worse, you know. No real harm in it, after all—"

"Harm," Herbert snorted, "maybe there is no harm in it, but if he was my nephew—"

"You're from these parts yourself?" Mr. Clarke inquired.

"Me?" said Mr. Herbert. "Certainly not. I couldn't live in a dead-and-alive hole like this. No lights, no pictures, no young ladies. No," he said, "I come through here once every six weeks. I'm a traveler, I am, a salesman." He produced cards and handed them around. "Keep them," he said. "Mr. Alfred Herbert. Representing Steeger and Company, 52 Bond Street, Cape Town. Old firm. Soft goods. Nothing but the best. 'Bestest and softest,' that's what I say—soft goods for soft limbs—and I like the business. Plenty of young ladies, my line," he said. "Plenty; and they like the things I've got to sell." He held invisible panties up in front of his paunch and simpered.

Mr. Clarke said, "He might have gone to prison, for instance—been a criminal, or taken to drink, or got some girl into trouble. No," he said, "that's what I told his mother. It might be much worse. It's just a revulsion from people. He wants to be alone. Pamela understands it."

"Who's she?" I said.

"Girl he's engaged to. Beautiful girl, beautiful."

"Well if I was engaged to a beautiful girl—" Mr. Herbert said.

"Quite, Mr. Herbert," Clarke said. "Quite. But then it takes all sorts to make a world, does it not?"

"Not monkey lovers, it doesn't," Herbert said. "And give me another brandy, Willy."

"I'm a journalist, Mr. Clarke," I said. "I wonder if you'd tell me—"

"We don't want any more publicity," he said.

"All right," I said. "Off the record. then. I'm interested—curious—and c osity is the basis of knowledge—it boils down to curiosity in the end. how did it all begin, Mr. Clarke? I m was there anything in his childhood-

"That is what we have all been thi ing about. Things that might exp it."

"And?"

"And there are certain factors wh seem to add up. I'm even responsible it, anyway, which is why I've come talk to him. Not an easy job."

"Talk to him?" I said. "Where?"

"Here. He comes here every Fri for provisions. And so I said I'd co and bring Pam."

"Where is she?" Herbert said. like to see her."

"Out in the car. Ladies aren't allo at the bar in South Africa, you kno

"You were saying it was your fau I said.

"Only in a way," Mr. Clarke s "But when he was about six I was Namaqualand and just as I was on way back I met a Boer with a b baboon. 'Want to buy the *klein b bejaan?*' he said. And I said, 'No, w would I do with it?' And he said, 'F for the kids, Mister,' and then I thou of Nobby. He always expected me bring him something strange, whe went on a trip."

"So you called him Nobby even w he was a kid," Herbert said.

"We were all called Nobby," Clarke said. "His dad, me and my o brother. All Clarkes seem to be. V confusing sometimes."

"See?" Herbert said to me. "Just w I said, like redheads being called Re America."

"Yes," I said.

MR. CLARKE went on, "I thou Nobby'd like him. Mad about mals, he was. So I bought him for bob. Well, he did like him. They wer thick as thieves, those two, never each other. Find 'em in bed toge unless they were watched. Frighte his mother out of her life—"

"Treacherous, eh?" Mr. Herbert s

"Treacherous? Certainly not, Herbert. But the baboon would him climbing. Led him up the big tree at the back of the house and two of them sat there, sixty foot up, their arms about each other, and El that's my sister-in-law, his mother—w and wrung her hands. 'All your fa she said and I said, 'Don't let him you're frightened. Make him nerv

" 'Frightened, you silly fool,' she and then she slapped my face. nerves. Very nervous women are al their children."

"Bachelor," I said.

"Yes," he said. "Anyway when did come down—and they only c because they were hungry—Nobby 'It's nice up there, swaying and loo out over the hills.' His mother cov her face with her hands and begat cry. He wanted us all to come up him and Bobby—that was the babo name—and see how nice it was. what was I saying?"

"About what his mother wanted w they did come down."

"Oh, yes, she wanted Bobby sho said, 'You couldn't do that,' and hi ther agreed with me. 'You see,' I 'if you did that it would be murde the boy and he'd never forgive us.'

" 'He's only six,' his mother said, just a little boy, he'd forget.'

" 'That's just it,' I said, 'he's a Kill that baboon,' I said, 'and you'l something in your son.'

" 'Then what shall I do?'

" 'Tell him it's all right. That it

onderful up there but that you don't heights. And ask him not to go too But you'll never keep those two on ground.'

o she did what we said, and they promised. There was a sort of arement between Ella and Nobby and baboon not to go too high—only as as the roof, and that was bad gh. Of course, afterward he joined Alpine Club and became quite well vn as a climber. So there you have he said. "The baboon's my fault, because of him he learnt to like oing; and because he liked climbing being high up, he grew to love re—the birds and the flowers, the and the rock rabbits. There's only nimal he doesn't like," Clarke said. What's that?" I asked.

Dogs," he said.

omething wrong with a man who not like dogs," Herbert said.

Why doesn't he?" I said. "Bitten as ld?"

No," Mr. Clarke said. "He says they oo slavish, for one thing. That they t real animals; been selected by for too long. And they chase things. oesn't like things to be chased."

Had a wonderful ratter once," Her- said. "Fox terrier called Tiger. white with a spot over one eye. ybody said, well, why didn't you im Spot? And I said no originality that's why. I'm an original, I am—"

Nobby's all right," the barman inter- d, "even if he is a little touched in ead. So might anybody be, after he's done and what's been done to But I'm sick of baboons. Today y, yesterday it was the trap man."

Who's he?" Herbert asked.

Man who's been making traps to baboons for the farmers round t. Quite an argument, there was, t them being humane or not."

hope he doesn't come tonight," Mr. e said. "Might be trouble. Nobby's st traps and all that."

told him not to come," the barman "I said, 'The baboon man's ng'—that's what we call Nobby. es to fetch his groceries, so you'd r not be around. Might be trouble.' e were my very words. And he 'Baboon man, who's he? Like to him.' So I told him the story and e said was, 'Must be crackers, that r—nuts.' And I said, 'Most of us is about something—fishing, or golf ls—'"

"Girls," Herbert said. "Mad about the girlies, that's me. And they're mad about me."

"That's right," the barman said. "Always letters from girls waiting for him here."

"Waiting for me everywhere," Mr. Herbert said. He turned as the door opened.

"Scented," the barman said. "That's how I know. I smell 'em." He looked up at the newcomer and said, "Well, gentlemen, there he is."

THE man came up to the bar, and the barman said to him, "I thought I told you not to come. We don't want trouble here and this is Mr. Nobby's night. We like him in these parts and don't want 'im upset."

"Very kind of you," Mr. Clarke said.

"Nothing at all," the barman said. "We like him and he likes us."

"And the baboon?" Mr. Herbert said.

"Likes everybody," the barman said.

"That shows 'e's off 'is 'ead," Herbert said. "Proves it."

"My name's Fenton," the stranger said, looking from Herbert to Clarke. "I'm here trapping baboons. I've invented a simple trap. I put one up for a farmer and he pays me for doing it and gives me a reward for the first ten baboons I catch. That's as well as the government reward."

"What sort of trap is it?" Mr. Clarke asked.

"Just a strong wire cage with two or more compartments, each six by six by four. I bait it with oranges or mealies."

"We call that corn in the States," Herbert said, "and very nice it is, too—green, with plenty of butter and salt."

"When they eat the bait," Fenton went on, "the door falls and they're caught."

"Then what do you do?"

"Shoot 'em with a two two."

"Must be fun," Herbert said.

"The argument," Fenton went on, "was that it was cruel because they might be left to starve in the trap. But if you leave them overnight the other baboons will clear out, and you won't catch another for weeks. And shooting them that way seems better to me than wounding them at long range."

"Quite," Mr. Clarke said. "It does seem better. But on the other hand I believe in living and letting things live."

"Not vermin," Mr. Herbert said.

"Who defines vermin?" Clarke said. "Does God say these animals are vermin

and those are not? It's a dangerous thing to define vermin, Mr. Herbert. You see, people get the habit of judging first animals and then their own kind. According to the way some people see it, Jews and Negroes are vermin. According to others, rich men, gentlemen—even businessmen like yourself—are vermin. You see what I mean, I trust. It's just the point of view."

Herbert snorted, "And what's that got to do with a pack of monkeys except that they're Communists, too, just like I said?"

WHILE he was talking, a tall thin man who looked like a gypsy had come in and stood staring around. That's Nobby, I'll bet, I thought.

Only the barman and I saw him. The bar faced the door and I had turned to look back for a moment without knowing why. He was a striking-looking boy of about twenty-four, dark with black eyes; very sunburned and thin, but not thin from lack of food—it was just that there was no fat on him. He had come in softly like a cat: One minute he had not been there, and the next he was.

Fenton said, "Well, it's none of my affair. They're classified as vermin and a reward is paid on them, and farmers want to get rid of them so I trap 'em and sell my traps. It's my way of making a living and it keeps me in the open air. It's a nice life; bit of sport and change."

"Nice girlies on the farms," Herbert said. "Corn-fed, as they say in the States, fine big girls."

"I wish they paid on size, though," Fenton said. "I got a big one today. One of the biggest I've ever seen. Old male, he was, and he looked me right in the eyes when I shot him. Wasn't more than five yards away from him."

No one else had seen young Nobby yet. I looked at him quickly. He was standing still and he was quite pale and his black eyes looked bigger and blacker. They made two holes in his skull. As I looked, he took hold of himself and came forward.

"Evening," he said. "You shot a big baboon, did you, Mr.—?"

"Fenton's the name."

"Mr. Fenton?"

"Yes I did. One of the biggest I've ever killed. Hard to get the big ones, you know. They're wily. But this one, why you'd have thought he was tame."

"Did you notice, by any chance, if he had lost the outside finger—the little finger—of his left hand?"

"Funny you should ask that," Fenton said, "because he had. Had he caused you any trouble?"

"No more trouble than one's friends usually cause one, Mr. Fenton," Nobby said. His face was white now under the tan. "Trouble, for instance, when you hear they have been murdered."

"What are you talking about?"

"You shot my friend, Fenton. That was Bobby, my friend. He lost that finger rescuing his wife when she was trapped by a big *perlemoen* and drowning. And you only caught him because his baby had got into your damn' trap and he was trying to get him out when the door fell behind him. The little chap was too light to spring it. But Bobby knew what it was all right, and that's how you got him."

"Well, I'm damned," Fenton said. "And I certainly never guessed he belonged to anyone."

"He didn't," Nobby said. "He wasn't my baboon."

"Then what's the trouble if he wasn't yours? I thought you said he was tame."

"He was," Nobby said.

"But he wasn't yours. I mean he didn't belong to you."

"He didn't belong to anyone. He was wild."

"Then you've got no case," Fenton said. "I mean if he'd belonged to you—was a tame one—it would be different. But he was just a wild one, belonged to no one."

"So something has to belong to someone?"

"Certainly, it has."

"An animal, a baboon, or a buck, or even a tree, has no rights of its own, eh? It can't be free. It has to have a contract of some kind before it has legal status and the right to live."

"You're crazy," Fenton said. "I don't understand what you're talking about. But just to put things right I'll give you the reward. I don't want any trouble." He put his hand in his pocket.

Nobby was getting a queer look in his eyes and his lip was twitching, so that I pushed in front of Fenton and said, "I'm very interested in all this, Mr. Clarke. I wonder if you'd tell me how it all began. I mean your association with the baboons."

"Drink this," his uncle said and pushed a whisky and soda into his hand.

"Highball," Herbert said. "Nothing like a highball—that's what we called them in the States– bourbon, rye—"

"Began," Nobby said vaguely. "It began when I was at the cottage. I went there when I got out of the Army. Very nervous state I was in, like lots of the chaps. You know, had to be alone. The war was a terrible thing," he said. "Terrible. The fires and flying through the night, and the loss of your friends and then shot down and a prisoner. Trapped," he said, "caged like an animal. So when I got out I went to our cottage by the sea. It was winter and no one was living near by. It's very isolated anyway, but in winter it's practically cut off after every big rain.

"Anyway, there I was all alone with some books and things. I read, I did a bit of painting, collected shells—I have a fine collection of shells—and watched the baboons. A big troop near there and in the evening if the tide was low they'd be down among the rocks getting shellfish—winkles, clams, limpets and the like. The *strandloopers,* I called them. Like children they were, scampering over the rocks, looking in the pools, and the baby baboons splashing each other like kids.

"Well, that's the way it was.

"THEN one night it was bright moonlight—I had been for a walk and just turned in when I heard screaming down by the sea. Terrible screams of horror they were, and terror. Like a woman," he said. "Frightful. I put on some clothes and ran to the sea. As I ran some big baboons passed me running my way. Baboons, I thought, that's what it is. One of them's in trouble and the big boys are going down to see. That's what I called the big old males—the big boys. There were five of them and one extra—the big leader—six in all.

"They passed me, naturally, and when I got there they were squatted on the rocks round two baboons that were in the water. One had its hand caught by a shell—like a damn' big round limpet—it had been trying to get off a rock. The other one of the big boys—the sixth—was trying to help it. His left hand was bleeding badly by now—that's when he lost his finger. Then he put it up to his mouth and sucked it.

"So it's a female, I thought, and her mate. That accounted for the other males coming. When he'd failed to rescue her himself he'd called them down from the cliffs where they lived more than a mile away. Very rarely do baboons leave their sleeping places at night, but of course it was nearly as light as day with the big round moon cutting a wide silver path across the ocean. But the tide was coming in and it wouldn't be long before the baboon was drowned, unless someone did something, so I shouted, 'It's all right, Bobby, I'll get her out for you.' "

"He always called them Bobby," Mr. Clarke said, "I mean, after that first one

MOTHER!

Your child will enjoy this tasty Laxative

You don't have to coax your child to take Ex-Lax. Children actually *love* its delicious chocolate taste.

Gentle and Effective

Mother, you'll be delighted to discover how well Ex-Lax works. It is both effective *and* gentle. Ex-Lax gives your child thorough relief without upsetting him. Many doctors use this *dependable* laxative in their practice.

Trusted by Millions

Mothers really have confidence in Ex-Lax—it's America's Favorite Family Laxative. So, when you or your youngster need relief, take Ex-Lax. *Still only 10¢.* There is no better laxative at *any* price.

When Nature "forgets" remember

got him. He called him Bobby be-
se it was short for *bobbejaan*."
'I always call them that," Nobby
d. "I mean when I see one I say,
ere goes a Bobby.' Somehow I al-
ys felt I might come across him again
day. But anyway I said, 'It's okay,
bby, it's okay, don't you worry.' But
was worrying—barking and cough-
. almost wringing his bloody hands.
was wet, too—soaked, and trembling.
st have been in the water pulling at
a long time. He'd even smashed one
is teeth biting at the shell. You know
things—conical shell nearly a foot
oss, very pretty inside, all colors,
en, pink, blue, mother-of-pearl—
t's why they call them *perlemoen*."
Abalone," I said. "Abalone, they
them in America. Get 'em on the
st Coast, make nice ash trays and
gs." I wanted Herbert to know that
been in America too.
That's it," he said, "same thing, I
pose. But a man can get caught by
n. The whole thing is just one great
cle clinging to the rock. You've got
catch them unawares to get them
se. They're very good to eat. But
one was aware, all right. There it
clamped on the bobby's wrist and
was pulling and struggling. She ha
ped screaming now I had come, but
pulled and every now and then a
e would come and lap at her.
The water was well over her belly by
and a big wave, if one came in,
ld have gone over her head. Lucky
as calm, but you get big waves here
etimes even when it's calm. They
come up for no reason. Anyway,
asn't far to the cottage, so I ran back.
ran I wondered what I'd got I could
I didn't have many tools. Just the
tools with a hammer among them,
ily. And that's what I brought back,
hammer and two tire levers.
When I got to the rocks again the
baboon was beside her again with
arms around her. I wondered if he
ld let me near. I wondered if she
ld bite. As I came up he coughed,
ving his big dogteeth about the size
great Dane's. I said, 'It's okay,
by, it's okay,' but I wasn't so sure.
even if he didn't go for me, she
ht bite me. The other baboons on
rocks came nearer till they were all
d me. The biggest one of all, the
f baboon leader, was nearest to me.
other five were a little behind. They
big too, but not as big as the leader,
was enormous; but all were very
old-dog baboons—old men.

"When I went nearer still they all barked and then the leader gave a louder bark. Like an order, almost, and they were still and silent watching me in the moonlight. Except for the husband—he was muttering, growling, making little choking noises which were meant to console and encourage her.

"It all came back to me then," he said. "I recognized what he was saying. He was saying in baboon language, it was okay. I began to talk to him the way I talked to Bobby when I was a kid. Instead of saying okay in English I said it in baboon. That's what Mother always called it. 'That child will talk baboon,' she'd say. Anyway as soon as I did the other baboons all barked. I barked back at them and then they all closed in. I wasn't at all afraid because they were talking as they came, and I talked back.

"THEY said, *What is it all about? What are you going to do?* I said, *I'm going to fix it up, I'm going to get her out.* I raised the hammer for them to see. The husband put out his hand to touch it. I let him. Then I tapped the shell so that they could see what I was going to do. I was afraid that when I raised the hammer they might think I was going to hit her on the head. So I raised it again and brought it slowly down onto the shell. They all watched. Their heads went up as I raised the hammer again, and followed it down—like people watching the ball at a tennis match. Then I gave the shell a big crack. It took three to break it.

"I was standing in the water beside the trapped baboon while I worked. She flinched like a man when I struck, but said nothing, did not even struggle. But she could feel the *perlemoen* weakening its hold, because after the second blow she talked. She said, *That's better. That's good.* And the men talked. They said, *Stay quiet. He'll get you out.* Then I used the tire lever, and in another minute she was free.

"I took the *perlemoen* home with me. Eat it, I thought. Eat it for lunch tomorrow; and it wasn't till afterward I thought any of it at all odd. I mean funny that I'd got out of bed to rescue a baboon trapped by a shell and had been talking baboon to them the way I'd talked to Bobby when I was a kid. I'd thought he and I just had a way of getting on together, understanding the sounds we made to each other, but he'd taught me baboon talk. Not advanced, of course. Not the way I know it now. But baby baboon talk, which may be

MANY SOCIAL PLEASURES
BECAUSE OF . . . .

PSORIASIS

SIROIL has been an inestimable boon to many people who had hesitated to dress becomingly because of embarrassing psoriasis lesions. Perhaps *SIROIL* can help YOU as it has helped in thousands of other cases. *SIROIL* tends to remove the crusts and scales of psoriasis which are external in character and located on the outer layer of the skin. If or when your psoriasis lesions recur, light applications of *SIROIL* will help keep them under control. Applied externally, *SIROIL* does not stain clothing or bed linens, nor does it interfere in any way with your daily routine. Try it. Certainly it's worth a trial, particularly since it's offered to you on a two-weeks'-satisfaction-or-money-refunded basis.

why the baboon I rescued was not afraid of me. Bit of luck, hey? She couldn't believe a man who talked like a baby baboon could do her harm. And he was the same, Bobby was—her husband. After a bit I could do anything with him."

"He certainly didn't seem afraid," Fenton, the trap man, said. "Cheeky. A cheeky one, he is, I thought. Looked right at me till I put up the two two and then he covered his face with his hands. That's when I noticed his finger had gone."

The man did not know when to keep his mouth shut. Put your foot in properly, you have, I thought.

"And then you shot him," Nobby said, "in a cage. Shot my friend where he couldn't do anything. Outside and without a gun you'd have been afraid of him. He could have killed you. Just torn you to pieces. But you had him behind wire, so you could torture him."

"—Only took two shots—"

"Torture him the way men torture each other now, and murder each other." Nobby was trembling with rage and moving forward very quietly.

I don't even know if anyone else noticed him moving. But I'm a very observant man and while he spoke he had come two feet nearer to Fenton. I noticed, too, that his uncle had left the bar. Nice time to go, I thought. Wish I'd gone too. There's going to be trouble.

"Two shots," Nobby said. "There was another friend of mine. An American pilot, and they took six to kill him, but they were just using him as a target. They said he'd attempted to escape so they let him run. More sporting as it were. And he's only one. No end to it all—shooting, killing. So one more won't matter, will it, Mr.—?"

"Fenton."

"—Mr. Fenton? Not one more. Because I'm going to kill you. I'm going to tear you to little pieces like Bobby would've done."

He lowered his body by bending his knees. His hands hung low. If he hadn't been a man I'd have said he was going to spring. I believe he was going to spring. All that climbing with the baboons had changed his muscular development, brought new muscles—muscles that are almost atrophied in man—back into play.

BUT as he crouched a girl stepped in front of him. She was a little thing not more than five feet high with greeny-gray eyes and brown hair; brown face too; brown as a gypsy she was. He straightened up when he saw her. Mr. Clarke was back too. So you fetched the dame, I thought. Pretty intelligent of you, Mr. Clarke, I thought, because the boy's going crackers. Something was just going to snap when she came in and took the tension off.

"A good thing you got her, Mr. Clarke," I said.

He said, "Yes, Pam understands him. I wish he'd marry her."

"She—you mean she wants to marry him?" Herbert asked. "Why, he's nuts. A pretty little thing like that—"

"No gentleness, no peace, Pam," Nobby said, "no rest, no quiet, just cages and traps and murder!"

The barman said, "Ladies aren't allowed here. I could lose my license. No ladies. That's the law."

"Then get a policeman," Herbert said. "If it wasn't for 'er you'd need one, to my way of thinking, to pick up the corpse. Pretty corpse Mr. Fenton would have made."

"Come with me," Pam said. She took Nobby by the arm.

"With you?" Nobby said. "Not to town. I couldn't do that. My friend," he said, "they'll need me more than ever now—to get them out of the traps, to break the traps, to—" His voice rose.

"Who said to town, Nobby?" the girl broke in. "We'll go to the shack brought my things. I'm coming u the shack with you."

"With the baboons all round? won't be afraid?"

"When a woman marries, Nobby husband's friends are her friends."

"Baboons," Herbert said. "A girl her—why anybody—Baboons. . . ."

The girl said, "Come, Nobby." put out her hand. He took it.

"I'll bring the stuff," his uncle He picked up the box of groceries.

I got hold of half a bag of me He bought a bag each week but div it into two parts to make it easie handle on the mountain path. I pretty proud at the way I managed the flat. We came back for the re the stuff.

Herbert said, "She's going with h

"Yes," I said.

He said, "I thought maybe it was a trick to let Fenton get away. Sc the daylights out of him, young N did."

"No," I said. "She's going, isn't s I asked Mr. Clarke.

"Yes," he said, "and she'll save Wonderful girl, that—"

"To the bloody monkeys," He said. "That girl. Why," he said, " they aren't even married."

PAM had come back into the bar. barman said again, "Ladies a allowed in the bar."

"I know," Pam said. Then she tu to Herbert and said, "You're quite about us not being married, Mr. Her but we will be. Tomorrow. Would like to come to the wedding?"

"I could be a witness," Herbert

"You could indeed," Clarke said, and me."

"And me," I said, "I want to co

"Of course," Pam said.

Herbert picked up his suitcase. "ents," he said, "presents." He op the case. "Silk," he said. He hel things up against himself. "Silk, said again, "nothing but the be Steegers. And I tell you what I'l I'll give her the bloody samples, t what I'll do. Silk to wear on 'er 'c moon with the baboons in the m tain—"

"Thank you, Mr. Herbert," Pam

"And I can kiss the bride?"

"Of course," she said, "everyone k the bride." She put up her face.

He kissed her and she said, "N says they'll be waiting for us."

"Who will?" Herbert said.

"The baboons, Mr. Herbert. He they come to help carry things up the car."

"Well, I'm damned," Herbert "Do you believe that, Mr. Clarke?"

"I don't know," Clarke said. not natural, but he has a way with mals."

"And girls," Herbert said. "Fa girl going—"

"The mealies are for them," Pam "It's been a bad year, you know, dry, and even a bag a week doesn very far among so many."

"I'll make the arrangements," Clarke said.

"Yes," she said, "please do." she smiled at us all and said, "G night." She said a special good nig the barman and he said, "Good Miss," and added, "But ladies allowed in here, you know."

She said, "I know and I'm going."

She said good night and smiled I've never seen a girl look so happ

"She's 'appy," Herbert said.

"Going to the baboons," I *"Straight up the uphill path"*—wh thought pretty good. But they we too busy thinking their own tho to notice. Thinking about tomo no doubt. I was. And about th boons coming down to meet the

mazing but true . . . today's modern trailer coaches have eautiful, completely furnished living rooms . . . home comfort that will amaze you.

At fine trailer parks—approved by T.C.M.A., you'll meet nice people like Mr. and Mrs. J. L. Matthews, who prefer the trailer coach life.

What woman wouldn't be thrilled by the convenience of an apartment-type kitchen like this . . . with built-in range, refrigerator, sink . . . Plenty of storage space.

Good Living...AT THE SIGN OF THE WINGED WHEEL

● For wonderful living freedom—marvelous home convenience, privacy, AND GREATER ECONOMY, you can't beat trailer coach life. Already, more than a million Americans have chosen it . . . Every day—every week—MORE thousands discover the many advantages of trailer coach living.

In a modern trailer coach, especially one built to the standards of the Trailer Coach Manufacturers Association, you get today's greatest value in year 'round living and travel accommodations.

SEE the smart styling of the completely furnished living rooms; the ultra-modern equipped kitchens with range, refrigerator, sink and cabinets; the separate bedrooms that have built-in furniture and ample wardrobe space; toilet and shower facilities are optional.

FIND OUT for yourself about the quality construction, the engineered insulation and efficient heating system that make a T.C.M.A. approved trailer coach ideal for gracious living, regardless of climate.

Trailer coaches bearing the winged wheel emblem of T.C.M.A. are made by the nation's leading manufacturers. Their manufacturing knowledge and experience assure you a product that offers *everything you need for good living.*

WRITE today for the *free*, 72-page official book with specifications and details of America's *finest* trailer coaches. Address Dept. 920, Trailer Coach Manufacturers Association, Civic Opera Building, Chicago 6, Ill.

Write...YOU CAN OWN A PROFITABLE TRAILER PARK

There is an excellent profit opportunity for a trailer park in your community. T.C.M.A. can give you valuable facts and guidance in starting or improving a park, even to valuable free architect's plans and the specific advice of experts retained by the Association.

As a first step, ask for "*Planning A Profitable Trailer Park*," containing pictures, diagrams and cost data. Write to Trailer Parks, Dept. 920, T.C.M.A., Civic Opera Bldg., Chicago 6, Illinois.

Collier's believes...

IN THIS DAY AND AGE

THE WORLD IS at the moment more than commonly grim. Political problems, particularly world political problems, are exceedingly difficult. The Russians are disagreeable and threatening. Some of our own people, Henry Agard Wallace, for instance, seems to be much more of a dupe of the Communists than you would expect a healthy Iowa boy to have turned out to be.

We can't, however, blame all of our troubles on the Russians or the chuckleheaded Americans who try to kiss the Communists into submission. Many other types are making mischief after their own fashion.

Many like to fish in troubled waters. Many hope to profit by muddying the waters. There are hell-raisers North and hell-raisers South who hope to get something for themselves out of embittering race relations. There are selfish arrogant men in business, in labor unions, even some in farm organizations, willing to make any amount of trouble for others in order to get mean advantages for themselves.

Collier's thinks the time has come to heed the normal rather than the abnormal. Collier's thinks that the American people have no problems that cannot be solved by patience, intelligence, good will and courage. Collier's thinks that instead of being on the verge of catastrophe the United States and all the world may be at the beginning of one of the truly golden ages of mankind. In cherishing these beliefs we do not think we are ignoring reality or committing the fallacy of wishful thinking.

In this editorial Collier's restates for this new era and a new generation its faith in the enduring American principles that made the United States the promised land to so many millions of immigrants and that offers hope now more than ever to the oppressed around the world.—Ed.

The number one fact is that for the first time in history Americans, in particular, and the world in general, know how to produce enough so that honest, industrious, reasonable people everywhere can earn for themselves the essentials of a good life. There is no settled spot on the globe at which it is not now possible, granted peace, for busy intelligent men and women to sustain themselves decently.

This has not always been true. It is emphatically now true, and very especially in the United States, that the means exist whereby we can produce and distribute enough so that all races and classes may live decently and well and develop whatever capacities they possess.

Collier's thinks to live at such a time of infinite promise is a very great privilege for citizens and institutions, including magazines. Collier's looks forward to aiding all that it can in making available these new opportunities for a good life for all.

Moreover, we don't despair about peace. We know that one nation can inflict war on other nations or upon the world if it pleases. We know that a few fanatic men in Moscow can or could attack the United States or any European country. We hope Russia will not embark upon any such adventure.

We are sure that great skill, great patience, great good will must be used if we are not to blunder into war. We think that the chances are good that our leaders will have the wisdom and the character so to manage our affairs that war will be avoided and a peace of good will gradually won.

Collier's aims to aid in every sound measure to preserve the peace and to safeguard the free life that is the crowning glory of mankind. So in spite of the tumult and confusion of the day, Collier's looks ahead to that better time we hope not far away when the energies of all, their imagination, and their skill will be used to create more and more good things to feed the bodies and souls of men.

Such is our faith. Such is our purpose. . . . W.L.C.

★★★ "It is the aim of Collier's to reflect impartially the best contemporary thought and on its own behalf to speak fearlessly without partisanship on all questions affecting the nation's welfare. It aims furthermore to keep always before its readers a high, sane, and cheerful ideal of American citizenship." . . . ROBERT J. COLLIER ★★★

All 25 Branches of PRACTICAL Mathematics

NOW—PRICE SLASHED IN HALF!

Yours for Easy High-Speed Mastery to Help You Qualify for a Better Job!

Brought to You by Leading Experts from M.I.T., Columbia, Cornell, Carnegie Tech., Georgia Tech., and many others! The Simplified, Streamlined Course Used by More Than 100,000 Men in Shop, Field and Office!

HERE'S A BRIEF GLIMPSE OF 25 SUBJECTS COVERED:

1. BASIC ARITHMETIC
Shop short-cuts, quick applications of addition, subtraction, multiplication, division.

2. ADVANCED ARITHMETIC
Percentages, fractions, ratio and proportion, rapid calculation.

3. BASIC ALGEBRA
Short cuts for many industrial and technical jobs; formulas, etc.

4. ADVANCED ALGEBRA
Solution of practical problems by use of simultaneous equations, graphs, etc.

5. PLANE GEOMETRY
How to measure angles, areas, distances, etc.

6. CONIC SECTIONS
Using parabola to determine path of shell, design of auto headlights, etc.

7. SOLID GEOMETRY
How to interpret blueprints; use of co-ordinate points in mechanical drawings, etc.

8. TRIGONOMETRY
How to calculate distance; use of theodolites, sextants, Vernier scale.

9. LOGARITHMS AND SLIDE RULE
How to use log tables in performing shortcut operations in engineering and military problems; how the slide-rule makes math problems simple.

10. THE CALCULUS
How it solves problems that can be solved in no other way; application to military, industrial problems.

11. DIFFERENTIAL EQUATIONS
How to determine rate of disintegrations of radio-active substances; how to project rate of population increase or decrease, etc.

12. MENSURATION
Measurement of lengths and angles; explanation of torque, density, specific gravity, tolerances, etc.

PRACTICAL APPLICATIONS

13. STRUCTURAL ENGINEERING
Steps required to produce a finished structure; stresses and strains, equilibrium, momentum, etc.

14. MACHINE-SHOP PRACTICE
Computing mounting of parts on adjustable angle plates, cutting speeds for lathe, drill press, etc.

15. HEAT
Instruments for controlling heat, expansion by heat, specific and latent heat, etc.

16. CHEMISTRY
Chemical equations. Decomposition, replacement. Redox reactions, etc.

17. HISTORY OF MATHEMATICS
Great mathematicians from Pythagoras, Euclid and Archimedes to Einstein of today.

18. ELECTRICITY
Units of measurement; resistances; calculation of capacitance; time constants, etc.

19. MILITARY GUNNERY
Range-finding; direction; the trajectory and variables influencing it, etc.

20. NAVIGATION AND AERIAL NAVIGATION
Plotting a course; piloting; Mercator chart and great-circle sailing, air speed and ground speeds, wind drift, etc.

21. RADIO AND TELEVISION
Vacuum tubes, sound volume; Amplifier stages, tank circuits, television and high frequency transmission, etc.

BUSINESS MATHEMATICS

22. LIFE INSURANCE
Premium tables; compound interest tables; annuities, dividends, etc.

23. ACCOUNTING
Practical basis of accounting; working credits, discounts, sinking-fund depreciation, profit and loss.

24. INTEREST
Simple and compound interest, focal dates, capital gains, trade-in discounts, etc.

25. BUSINESS STATISTICS
Business cycle, index numbers, map and flow-charts, etc.

The above is only a small fraction of the subjects covered!

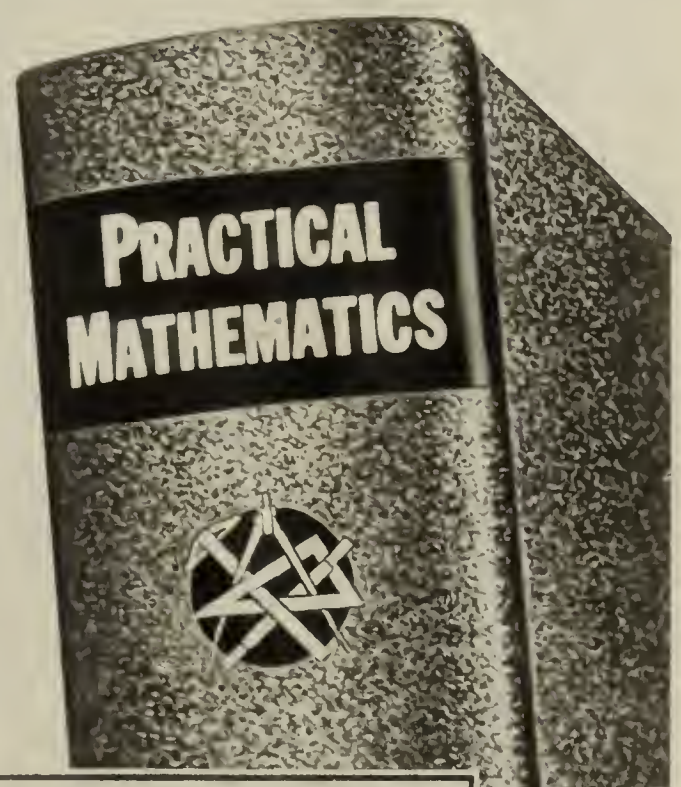
4 Big Volumes in One at amazing ½ price bargain



with * **FREE** Valuable Gift Book! *now only* $4.95

NOW the NATIONAL EDUCATIONAL ALLIANCE offers you—in *one* low-priced book, its streamlined Course in Mathematics designed to answer the urgent calls from industry for mathematically trained men in virtually *every* field!

You save *half the cost* of the famous 4-volume set published at $9.80—even *much more* on the de luxe $13.80 edition. Yet here are all 25 Branches of Mathematics—every subject, every lesson, every word complete in ONE big bargain book!

On work bench, in drafting room, in laboratory; in tool die and pattern making; in construction and engineering; there's hardly a field where a mathematically trained man hasn't a decided advantage. He gets the better job—bigger pay—wins promotion quickly—and enjoys greater security through all his earning years.

This Course makes it possible for the average person to acquire—*in only a few months*—a practical working knowledge of all 25 branches of useful mathematics. You receive fascinating, illustrated home-study lessons from 28 foremost instructors chosen from outstanding universities!

No Previous Knowledge Needed!

You start with basic arithmetic and proceed by easy stages to an understanding of the most advance mathematics.

You learn how to use Algebra for short-cuts in daily shop problems, in construction work, in tool and die making, in welding, sheet metal work and pattern making, in office and laboratory. You learn how to apply Geometry in chemistry, mechanics, electricity and radio, in drafting room; how to employ Trigonometry in gearing, lathe centers, blueprints, die punches, etc.; how to utilize Calculus, etc. *Self-test problems with answers check your progress every step of the way!*

1280 PAGES! Over 600 ILLUSTRATIONS!
The Full Contents of the Famous 4-Volume Course Now in ONE Volume—at a Tremendous Saving! Not a Page, Not a Line, Not a Word Omitted!

*Valuable 160 PAGE **FREE** Gift Book with **FREE** 7-Day Trial!

Amazing Mathematical SHORT-CUT TO CORRECT ANSWERS

Contains Exactly the Same Invaluable Time- and Labor-Saving Logarithm Tables as Books Selling as High as— $4.50!

This book of Logarithms is the greatest short-cut ever devised for quick and easy multiplying, dividing and all other calculating. So simple you begin to apply it in a few minutes. Covers logs for all numbers to the 6th place; includes a table of circular arcs. FREE even if you return *Practical Mathematics!*

Limited Edition—ACT NOW!

Normally, mathematical training as comprehensive as this book Course would cost you hundreds of dollars and years of study. Now you get it in this 4-in-1 volume at a small fraction of the cost and time! Try it a week FREE! After a week you may return it and owe *nothing;* or keep it for only $4.95, on easy terms shown in coupon.

This low-priced one-volume edition is limited in quantity. Avoid disappointment—mail Free-Trial Coupon NOW! We'll send you the Logarithm Book to keep *FREE*, even if you return the Course!

Picture OF THE MONTH

The Enterprise Studios present
DANA ANDREWS · LILLI PALMER
and
LOUIS JOURDAN
in
"NO MINOR VICES"
with
JANE WYATT
and **NORMAN LLOYD**
Original Screen Play by **ARNOLD MANOFF**
Produced and Directed by
LEWIS MILESTONE
Distributed by
Metro-Goldwyn-Mayer

Sensing the needs of the times, Metro-Goldwyn-Mayer now presents an entertainment designed to make you forget everything but the popular stars and their hilarious adventures in "No Minor Vices".

We want to be the first to tell you how well they have succeeded:

Before all the other film critics fire off their salvos of acclaim . . . before the advertising copywriters pour their enthusiasm into prose, we want to make a simple statement: to wit, "No Minor Vices" is a major triumph, a merry, madcap, utterly delightful movie, a fine job by the Enterprise Studios.

Those enterprising and highly entertaining gentlemen have cooked up as saucy (and as neatly naughty) a dish as one could hope to find. Basically, "No Minor Vices" poses the question, "Can an artist's model be a model wife at the same time?" Although zephyr-light and zany, it packs more wisdom into its reels than a dozen weighty tomes on Marriage, Men and Morality.

As for its stars, there's dashing Dana Andrews as The Husband (a very attractive husband, jealous and very much in love); there's the good-looking new star, Louis Jourdan as The Lover (tempestuous, uninhibited and very much in love -maybe). And then, there's the alluring young wife turned model. She is Lilli Palmer (beautiful, bewitching and very much in love—but definitely). Lilli you may remember was the girl in "Body and Soul" who contributed so unstintingly of both. In "No Minor Vices" she turns in, if you'll pardon the expression, an equally well-rounded performance.

Loud mention should also be made of the gifted supporting cast headed by lovely Jane Wyatt. She plays a nurse (very much in love, too). And there's a live lobster affectionately called Jabberwock. Even he (or she) has oodles of personality.

For a whipperdoo of a scenario that brims over with freshness and originality our movie *magnum cum laude* goes to Arnold Manoff. And, as far as we're concerned, for his super-skillful direction and production, famous Lewis Milestone can stay right there at the head of the class.

Having said all this, we feel that you have a fairish idea of the way we feel about "No Minor Vices" which is simply: Please don't miss it.

MONUMENTAL RUINS

DEAR SIR: I just happened to pick up June 12th Collier's and read the art Saint-Lô Fights Another Battle by Stan Frank. Mr. Frank states that Saint was 90 per cent destroyed and anot town is being erected on the site. As I r I wondered if Mr. Frank had ever visi Cassino, on the Rapido River in Italy.

This town was so destroyed the tow people are building a new town across river from the ruins. And I believe the town is being left as is as a sort of memorial for the countless G.I.s who d there: American, British, British Terr rial Troops, Italian and Poles attac to the British army.

At this writing I don't think we helping the people of Cassino rebuild t town.

Maybe it's wrong to say things like but I think places like Saint-Lô, Cassi San Pietro and other towns should publicized more so certain people woul be thinking of wars all the time.

RICHARD J. HADL, Roselle, N.

PHILADELPHIA

SIR: Please thank Mr. Dickson Hartw for his very fine article. It's one of best. I'm only sorry he did not go f ther. He could have. I'm also sorry he rather Arnold Cain did not take m pictures of our lovely (?) city ruins.

KENNETH M. CARROLL, Philadelphia,

. . . Dickson Hartwell's article is very t in all respects but one: the depriving women of the jobs for matrons and the moving of the beds from the firehouse. has, since his article, been proved t they were very necessary after dozens

BY FRELING FOSTER

ONE OF THE MOST spectacular tight-rope performances on record was that given recently by a nineteen-year-old acrobat, Sigwart Bach of Germany, on a wire 490 feet long stretched between two Alpine peaks near Oberammergau. Without a safety net beneath him, Bach crossed and recrossed this wire which spanned a ravine 9,000 feet deep.

ONE OF OUR PREVIOUS Nature Boys was Joe Knowles, who, on August 4, 1913, walked into the dense Maine woods—alone, unarmed, unequipped and practically naked—for a Boston newspaper that hoped its circulation would be increased by his stories of survival. During the eight weeks, his adventures, scratched on birch bark and left in the forks of trees for reporters, did attract so many new readers that one envious competitor attacked Joe with a malicious story which caused much comment before he proved it untrue. It contended that all his experiences were fabrications, pointing out as an example that, contrary to Joe's claim, his bearskin robe had not come from a bear he had trapped, because it contained four bullet holes.

AN INCREDIBLE CASE of obstinacy was disclosed recently by an elderly man at the funeral of his brother with whom he had shared, from early manhood, a small one-room cabin near Canisteo, New York. Following a quarrel, they had divided the room in half with a chalk line and neither had crossed the line nor spoken a word to the other since that day—62 years ago.

ON THE MORNING of Decemb 9, 1943, the dismembered body of man named John Jump was found a railroad track near Fort Valle Georgia. To those who came to t scene, it appeared that the victi probably in a drunken stupor, h fallen in front of an onrushing trai But the man had been killed at hon by his wife in a murder so carefu planned that she had even spent ma hours learning how a body should placed beside the rails to simula death by accident. The case mig have been recorded as such had n the lady made a slight last-minu mistake. Of the three tracks on th right of way, she happened to sele the one over which no train had r for eight months.

THE ONLY AMERICANS wh are allowed to have more than o legal wife at a time are Indians b longing to certain tribes. They ha not yet banned polygamy, and Co gress, having recognized the sove eignty of their chiefs in tribal affai has not felt justified in changing th age-old domestic customs.

OF THE SOME 20 different pu poses for which animals use th tails, the one most important to raci greyhounds and race horses is as rudder when rounding turns. F instance, Mick the Miller owed h reputation as the greatest racing gre hound of all time to his perfect ta while the colt Coron—son of the 19 English Derby winner Coronach owed his failure to win any of t numerous races he ran to the fact th he had no tail at all.

The Week's Work

BACK after a refresher foreign correspondent's flight on which he covered Greece, Palestine, Italy, France, Holland, Norway and Germany, Quentin Reynolds reports that he found the Israelis the toughest fighters he's ever seen: "Their battle cry is 'Either Palestine or the Mediterranean!' And they point into the sea!"

Toughest Europeans, says Reynolds, are the Norwegians: "Their rations make an English meal look like a dinner at the Ritz. They live on fish, and export everything so they can buy the military necessities that will enable them to hold out for a while for the British and Americans should Der Russian Tag arrive."

In Paris, Quent met Europe's hardest-working man: Averell Harriman. "He works day and night to make ERP click," Reynolds enthuses. "He's made Europe realize democracy is more than a theory: that ERP is to be used as vitamins, not as a sleeping pill. That it is a greater weapon than the A-bomb."

One Sunday morning at ten in Rome, Quent was granted a special audience with the Pope. "He spoke in English—he speaks a dozen or so languages," Quent says. "and he lived up to everything I've ever heard of him. He is the greatest man I ever interviewed!"

To gather Rainbow Route to Berlin, a Collier's exclusive about the air lift (p. 12), Reynolds deposited his portly hulk among the coal and flour sacks of the C-47s he rode four times.

"No, I don't know if there will be a war," Mr. R. said in reply to our question, a popular one nowadays. "Only the radio commentators know that!"

Howard Whitman demonstrating How To Keep Out of Trouble—Page 28

DEAR Week's Work: Regarding my story, It Happened to a Dog (p. 16), when I was a tot, I acquired one half a dog in trade with my brother for one half a runt pig. It was a squally-voiced fox hound name of Rum, and more gun-shy than a rabbit. It turned out I owned the hungry half of Rum, just as I had owned the eating end of the pig. Deciding one half a dog is worse than none, I made my brother sole owner of Rum for 25 cents. He promptly sold Rum for $5 . . .

After owning a succession of bird dogs, beagles and grotesque coonhounds, I went to Columbia U., about 20 miles from home. My beagles & Co. waited impatiently all week for the last Friday class, so we could ramble through the New Jersey covers all week end.

At Columbia, rowing seemed to the only outdoors activity you co do sitting down, and not be scra bling with a bunch of guys for little object like a football, so I row like sixty, for four years. We had g luck.

Ten years later the South Carol doctor who removed my appendix kept bird dogs and foxhounds), t me I still had good stomach musc —proving, I believe, that rowing good for dog lovers.

College over, Corey Ford—a bi dog and beagle keeper, too—agr with me about the importance matching wits with fish. So we w to Alaska for five summers to ba trout and grayling and write about

My kennelful of dogs dwindled one pointer during the war bu gained a swell wife (she likes do and also a son, who at one year ye "Whoa!" at the pointer. As soon he learns to say, "Charge," a "Fetch" and "Tallyho," we are go to get some more bird dogs, a beagles, and a foxhound or two.

Alastair MacB

CAMERON SHIPP, starting three-parter on the life of t charming skitterwit, Billie Bu (p. 18), is another Columbia U. m completing a cycle. He'd gone up that Great, Gray Pile of Learn from a North Carolina hamlet, giv out to his family how he esteemed ucation. "Fact is," Shipp confesses wanted to get to New York to see Ziegfeld Follies a Billie Burke. I acc plished both objecti so thoroughly I got the dean's list— probation one."

Columbia ship Shipp into the wo as a writer, and in t he began to hit C lier's with a lot hard-boiled stuff readers will reme ber. But through years he kept the fla for Miss Burke bu ing fiercely. "I'd to know Miss Bu very well years ago," he reveals. finally met her—Collier's introduc us. Ah! these wasted middle em years—"

This week's cover: Drawi Teacher: Startled at the blackboar petite, freckled eight-year-old Ca Nugent, who lives in Hollywood a goes to school a block from M-G-M studios. Mead-Madd made the shot. Though this is Car debut as a cover girl, she has been several movies and takes her work stride. Papa and Mama Nugent d allow her career to interfere with health and normal kiddy-isms. . . .

Of Mice and Molly

By JOHN BAILEY

Bill was the type that loves all dumb creatures. That probably accounts for his sentimental attitude toward Gwendolyn—a girl who wasn't noticeably smart

A SMALL, brown, businesslike mouse came up the steps of the Sea View Inn, crossed the porch within a foot of the young man seated in the rocker, paused at the front door, cleared his throat, and went on in.

With a feeble cry the young man rose vertically about six inches.

Captain Pritchett, slumped down in the next rocker, clucked sympathetically.

"Nerves?" he inquired.

"Mouse," muttered the young man jerkily. "Porch. Cleared throat. Went in house."

"An auditory illusion," said the captain, soothingly. "Not uncommon if one is feeling below par mentally. It was I who cleared my throat."

"Oh."

"As to that mouse," continued the captain, "you may have noticed a sort of unfurtiveness? A kind of mouselike insouciance?"

"I did," shuddered the young man. "A cool customer. Acted as if he lived here."

"He does," said the captain. "He and his sisters. They not only live here, but they enjoy the full status of regular boarders, with all privileges. Some people," he mused, "would say that we have mice. But it would be more exact to say that we have mice *stopping* here. They are loved and respected by all. Perhaps you would care to hear the story?"

"What story?"

"The story I am about to tell you," explained the captain.

The young man said that, aside from not hearing the story, nothing would please him more.

I will begin (said Captain Pritchett) with the moment Bill Schuyler stepped into the lobby of the Sea View Inn.

Tall, well built, with a tanned face and pleasant blue eyes, Bill was as nice a young man as you would care to meet. No *(Continued on page 91)*

ILLUSTRATED BY BARBARA SCHWINN

"Ah!" I said. "Then suppose we have a small one apiece." "Oh, we mustn't," said Molly. We had a small one apiece

Rainbow Route To Berlin

By QUENTIN REYNOLDS

The boys who fly for LeMay Coal & Feed Co. have written a saga of salesmanship for democracy. The Air Force calls it an air lift. Berliners call it the Miracle of the Flour and the Coal

THEY'LL be talking about this one fifty years from now. It will become a legend in Air Force circles, just as the supply line over the Hump during the war years has already become a legend. They'll be talking of how a handful of American and British planes kept two and a half million people of Berlin alive during the summer of 1948. They'll be telling how we beat the Russians without firing a shot, in the hottest cold war ever fought between nations.

The greatest air-supply operation in history began with a phone call on the morning of June 27, 1948. General Lucius Clay in Berlin was calling General Curtis E. LeMay in Wiesbaden. It was a short and rather unhappy conversation, and a great many things were left unsaid by both men. Clay told LeMay that Berlin would have to be fed by air and that he, LeMay, would be in charge of the operation.

Neither man mentioned the fine four-laned *Autobahn* that stretched from Frankfurt right across the Russian zone almost to Berlin. Neither mentioned the railroad which the Russians had closed to make "necessary repairs." LeMay didn't say, "Why in hell can't we run an armed convoy down the *Autobahn?* For God's sake, how much more are we going to take from these jokers? If they're asking for it, let's find out now. We've got a few Jugs here to give the convoy cover." He didn't say that; he just chewed savagely on his unlighted cigar, thinking perhaps of his group of P-47 Thunderbolts resting impotently at its base. These P-47s are never anything but "Jugs" to Air Force men.

General Clay didn't say, "I've tried to sell that to Washington but got nowhere. They're afraid of an incident. We got to do it their way, by air." He didn't say that messages had been flying between him and the State Department for the past two days, and that Secretary of State Marshall had decided not to risk any armed conflict with the Russians. Clay just gave LeMay some terse orders, and, being a soldier, LeMay choked a little and said calmly, "Right, General! You get me the planes. We'll do our part from this end."

Well, that's how it began. Things moved fast during the next few hours. Clay phoned Washington and told Marshall that LeMay would need a lot of C-54s. Marshall, General Omar Bradley and General Hoyt Vandenberg went into an immediate huddle.

Within a few moments, teletype messages were flying to Hawaii, to Alaska, to Texas, to Panama.

Because of the time difference, it was only ten in the morning at Bergstrom Field down in Austin, Texas, where the 48th Troop Carrier Squadron was based. An hour before this a C-54 had landed from Guam, and Lieutenant Colonel Forrest Coon, pilot of the ship, had climbed happily down from the cockpit. He'd been away two and a half years, in the Philippines and on Guam, and now at last he was home.

It was a hot day and he joined a group of the pilots who were cavorting in the pool. Coon had a long leave coming and he'd go home and get acquainted with his family again.

His thoughts were interrupted by an order over the loud-speaker: "All personnel report immediately to Operations."

Announcement Makes Fliers Happy

A few moments later, Coon and the others were listening to Colonel Raphael Baez telling them that they would be off for Berlin immediately. The whole squadron would go. That meant 48 officers and 88 enlisted men. The fliers smiled. Even Coon was happy. Germany? Brother, this might be it!

The 54th Troop Carrier Squadron was at its home base, Elmendorf Field, Anchorage, Alaska, that Sunday morning. This outfit has flown more bad-weather missions than perhaps any other in the Air Force. When Colonel Thomas Mosely received the message to get his boys to the Rhein-Main airport at Frankfurt he, too, acted quickly.

Lieutenant Colonel James Samouce, the squadron leader, and his 41 officers and 169 enlisted men heard the news with joy. Germany! They wouldn't need their snowshoes, standard equipment for Alaska-based planes, but they brought them along anyhow. (And hung them on the wall of their Operations room at Rhein-Main.) Within ten hours the squadron was on its way.

Hickam Field, base for the 19th Troop Carrier Squadron, is at Honolulu. When Colonel Davidson, C. O. at Hickam, received the order from Washington that morning, one of his aircraft was at Brisbane, Australia. He told his squadron leader, Major S. Cresswell, to hurry to Frankfurt with his eleven planes and their ground crews.

Before the last plane had left, a teletype message had reached Lieutenant Michael Pashkevich and his crew in Brisbane, where they had just landed with a load of supplies. In usual cryptic Air Force terminology the message merely read: *Return Hickam immediately.* Pashkevich and his crew of nine climbed right back into their big ship and headed for Hickam. They were there only long enough to have their motors checked and they too joined the migration to Germany.

American Army planes kept streaming into Frankfurt. They came from Westover Field in Massachusetts, from Albrook Field in Panama, and LeMay, chewing on his unlighted cigar, put them right to work. The boys found it a lot tougher than they had expeeted. They hadn't known that the C-54s would be lifting ten tons and that the two-engined C-47s would be carting 8,000 pounds of coal and flour. This overloading is called a "calculated risk" in Air Force language. No commercial plane would be allowed to leave an airport carrying such loads. But this was an emergency operation, and the rules of war were applicd.

The boys hadn't known that many of

At the end of the rainbow lies Tempelhof Airport, fogged with rain

them would be flying 140 hours a month and they hadn't known about Tempelhof, the Berlin airport. Tempelhof was designed for the use of relatively short-range planes, like the Junkers. The runways had to be lengthened; new strips had to be built, but the chief disadvantage of Tempelhof is the rows of two-story houses which surround the field.

During the first month of Operation Vittles, there were only seven really good days for flying. Most of the time it was done by instrument. Bringing heavily loaded planes into Tempelhof under a 200-foot ceiling takes a lot of careful and expert guidance, and those houses around the field add to the hazards. The boys hadn't known about the YAKs and the PE-2s which the Russians have been flying in the "corridor" every day just to make life more difficult for them. You never can know when a speedy YAK will streak out of a cloud almost to brush wings with you.

But the air lift was established, and the people of Berlin have not starved. More important in many ways is the fact that the thin line of aircraft landing or taking off every three minutes has enabled the United States to maintain its foreign policy.

It has cost us one and a half million dollars a week to support the life line. This has been the price of retaining our dignity as a nation. The Russians have done everything (short of shooting) to make us leave Berlin. General Clay declared last July that the Soviets could never get us out by anything but an act of war. The Russians thought the blockade of Berlin would eliminate us. With England and France, we were committed to feeding the people of the Berlin western sectors. If we had not been able to do this we would have had no alternative but to leave.

The air lift has also made it possible for us to retain the spiritual leadership of the Western nations in Europe. Had we left Berlin, the Communists in western Europe would have chortled gleefully and would have capitalized on our weakness. Had we left Berlin, thousands in Greece, fearing that Russian domination in Europe was inevitable, would have flocked to the standard of Markos. Had we left Berlin, Togliatti in Italy, an eloquent and persuasive man, might well have doubled the already substantial strength of his Communist party overnight, and Communists in France would have been given new strength.

As a political weapon, the air lift has been tremendously effective. Even the Russians have found no answer to it. They ridiculed it in their German-language newspapers in Berlin, but the citizens of the capital looked aloft and, seeing flour and coal coming to them on wings, laughed at the efforts of the Soviet propagandists. Only history can decide how vitally important in political terms the air lift will have been.

Suppose we consider it in human terms. We'll ride from Wiesbaden to Berlin with the LeMay Coal & Feed Company (delivery guaranteed). The briefing room in the Operations building at the airfield reminds you of briefing rooms you saw during the war. The same pilots are there, lugging the same parachutes, wearing the same overalls and peaked caps. There is the same rather grim tone to their talk; two of their buddies in a C-47 died when they cracked into a hill the night before.

"Take Number Five," the briefing officer says to dark-haired young Lieutenant Gerald Kercher of Cass City, Michigan. Kercher is our pilot, and Lieutenant Cloyd Pearce is the copilot. We climb into a bus and are driven to the fifth plane in line. It has been loaded. Large boxes of powdered milk and dozens of flour-filled sacks are lashed to the floor inside. The manifest is lying on top of one of the boxes.

Kercher looks at it and blinks. "Eight thousand pounds," he says to Pearce. "Think this old crate can lift that much?"

"That's your problem, chum," the copilot says cheerfully.

They take their places, and Kercher puts me in the navigator's seat. Ahead of us the other planes have started their engines.

Through earphones you hear the control tower: "Number One take off at 1700 hours. Others follow three-minute intervals."

Now our propellers are whirling, and the plane shakes and seems to snarl in protest. The first C-47 roars down the runway and then rises heavily. The others follow and now it's our turn. Gerry Kercher looks back, grins and yells, "Hang on," and then he bends over the throttle.

We start to roll. Gerry isn't sitting back relaxed. The skin is tight on the back of his neck. The plane gathers momentum slowly. It creaks and groans with the effort. We're halfway down the runway now, and the plane feels as logy as a sackful of wet wheat. I feel I want to lift it by main force, and after what seems an eternity, it lurches a bit and we're airborne.

Two Yank pilots pick up instructions for the Berlin run in the briefing room at Rhein-Main

The pilot still isn't relaxed. He won't be until he gets over those hills at Fulda. Slowly, agonizingly the plane climbs and then, after some five minutes, Gerry raises his head and sits back. The copilot leaves his seat and comes to the navigator's niche.

"Sit up with the skipper," he says. "You can see something up there."

Kercher offers me a cigarette and grins when I take the copilot's seat. His grin fades as he points to a hill on our left.

"That's what Smith and Williams ran into last night," he says simply, and then he turns his head away from the hill. "Both of them had over 2,000 hours in twin-engine jobs," he adds.

We gain height slowly. The plane three minutes ahead of us, unseen, would be flying at 5,000 feet. We would maintain an altitude of 5,500 feet. The ship following us would be 500 feet below us, and if it maintained its speed, would be three minutes behind us. This staggering of altitudes did not eliminate the possibility of collision, but it minimized the danger.

Ahead of us are dark, ugly-looking clouds. A commercial plane would have risen 2,000 feet to avoid flying through them, but we have to stay on course.

We enter the low-pressure area, and immediately it seems as though we are being pelted by thousands of pebbles.

"Hail!" Gerry yells. "Look at them bounce off the wings; they're big as walnuts."

For an hour we fly through hail and rain and huge masses of thick, angry clouds. This is routine, but careful Gerry is constantly calling the weather ship, which is above us somewhere giving reports at different positions and altitudes.

Finally we emerge into clear, sunlit air. Pearce leans over my shoulder to get a better look.

"I make that Dessau down there," he tells Gerry.

Kercher nods and says, "Take a look at those Russkies."

We are over the Russian zone now, and below is the huge airport outside of Dessau.

"All fighters," Gerry mutters excitedly. "Count 'em."

We count them. There are 78 Russian planes on the field. No one knows how many YAKs and jets the Russians have in Germany but they have plenty. You never fly over an air strip in the Soviet zone without seeing at least 30 planes.

We have been flying nearly two hours now, when Gerry begins that peculiar form of double-talk intelligible only to pilots and control-tower operatives.

"Calling Tempelhof tower," he drones. "Easy 234 calling for landing instructions. Am five miles southwest of field. Altitude five thousand. Victor Flight Roger. Over."

"Easy" meant that an eastbound C-47 was calling. "Big Easy" would have meant an eastbound C-54 (the 54s are the bigger planes). Victor Flight Roger (VFR) was another way of saying that the pilot would not need to make an instrument landing. He would follow visual flight rules.

Within a few seconds the answers came through the earphones: "Okay, Easy 234. Landing on grass to east parallel to Runway 27. Call on base leg. Over."

We circled Tempelhof and landed. We were no sooner out of the aircraft than a truck moved alongside. Six men stepped into the plane, and the unloading began.

Kercher and Pearce had time to hurry into the snack bar at Tempelhof for a milk shake before the loud-speaker told them it was time for the return trip. They said goodby to me casually and headed for their aircraft. Usually the pilots make two round trips a day, but quite often they have to make three. By the end of July the strain began to tell a bit, and LeMay impressed his headquarters staff into action. The latter became the week-end pilots, to give the regular fliers some rest.

General LeMay, who can fly anything with wings, made a dozen trips himself, flying either a C-47 or a C-54. Even the public relations officers and the adjutants and the staff of the bases in both Wiesbaden and Rhein-Main took over the controls on week ends.

The air lift began in June. By August 1st, the Russians had stopped ridiculing the effort. By that date, 43,224 tons of food and fuel had been flown into Berlin. There had been 8,368 flights, and the planes had covered 5,000,000 miles with only two fatal accidents.

The air lift has rejuvenated Berlin. The policy of the Western nations had been to teach the people democracy, but the truth is that Germans hadn't been taking very well to the teaching. They had watched the Russians take one positive aggressive step after another and they had watched the Western nations hesitate. They had begun to wonder whether "democracy" wasn't just another word for "appeasement." Then at long last, they saw democracy at work. All day and all night they heard the drone of engines. They saw trucks tearing out of Tempelhof filled with supplies for the hospitals or with food and coal which were being hurried to warehouses and then delivered to the ration shops. The Americans had stopped making speeches; they were actually defying the Russians.

The air lift became the *(Continued on page 44)*

Death Had Strange Hands

By CHARLES B. CHILD

"Lipstick," said Inspector Chafik, "is notoriously dangerous."

It can record a lover's kiss—or a murderer's fingerprints

A TALL, gaunt sergeant of the Baghdad Criminal Investigation Department entered the garden cinema of the Al-Rashid during the second showing of the main feature, which was a detective film. He searched for, and found, a neat little man, touched him on the shoulder, and said in Arabic, "Sir, permit me to disturb you."

"I hear you, Abdullah. But you interrupt my concentration on the truly baffling problem of this animated corpse."

"Sir, I regret, but there has been—"

Inspector Chafik rose reluctantly.

"I shall never know the true story," he sighed, with a final glance at the film. "Well, Abdullah?"

"Sir, we have a corpse. The wife of Dr. Ibrahim Fadan of the Royal Hospital."

The Inspector followed his assistant to the waiting car. "Give me your report," he said, as they raced through the creamy moonlight.

"I have only the telephone report of the *Mufawwadh* of the police post at the north gate, sir. He states he was called to the house of Dr. Fadan by the resident servant, who returned from an evening's outing to find his mistress dead. Death was by strangulation."

"And the husband?"

"They are searching for him. I understand the woman was of French birth."

Inspector Chafik extracted a card from the filing

"There is no justice," the man muttered. "He sent me away for nothing. I, Hassan, who served him faithfully for many years"

cabinet of his brain. "Naomi, nee Bousset," he quoted. "Born Paris, 1922. She met and married Ibrahim Fadan, in Beirut, in 1946. Fadan is a great surgeon, a man blessed with healing hands." Chafik shrugged and added softly, "I know other things, but they are indiscreet."

The car wheeled into the driveway of a house set back behind fine shade trees. It was convenient to the hospital where Dr. Fadan was resident surgeon. A trooper of the suburban patrol mounted guard at the door, and when the Inspector entered he was greeted by the local station officer.

The *Mufawwadh* said, "Since I telephoned, the husband has been traced. He is at the hospital, engaged in a delicate operation."

Chafik answered, "He can help the living while I investigate the dead."

HE WENT to the bedroom of Naomi Fadan and stopped in the doorway with hands folded behind his back, his thin face expressionless. The room was large. Windows opened on the Tigris. The river breeze stirred the curtains and also gave movement to the dark hair of the woman, whose body was flung carelessly across the bed.

She had been pretty. Chafik could understand why the doctor, a middle-aged bachelor had been attracted to somebody so young and colorful; but he wondered why she had bound herself to a man much older, and of different race.

When he went nearer he saw faint, reddish smudges on the ivory nightdress. Another one on the left cheek stood out with startling clarity, showing the whorls and looped ridges of an obvious thumbprint. There were lesser marks on the throat.

The woman's mouth and chin were smeared with lipstick, and Chafik said, "The killer stopped the victim's cries with a hand. Hence the fingerprints so generously distributed."

Sergeant Abdullah ventured, "Sir, if he had strangled her with unsmeared hands we would have found nothing. Fingers do not leave decipherable marks on flesh. This lipstick will hang him."

"Lipstick is notoriously dangerous," commented the Inspector, dryly. He looked again at the mark on the parchment cheek. "But one does not attach such a seal to a document of crime." Chafik stroked his cheek reflectively and went on:

"I have no affection for fingerprints. Their design resembles a maze such as the one I wander in now." He nodded to Corporal Yacoub of the Fingerprint Bureau, who was waiting with his apparatus, and turned from the corpse.

The Inspector wandered around the room, touching things absent-mindedly, leaving his assistants to their duties. It was his custom to keep his mind inactive until supplied with facts.

He was idly examining a portrait hung above the bed, when Abdullah called him. The sergeant had been searching a bureau crammed with old letters and hoarded bills and had arranged them in neat piles.

"There are letters which may be of interest, sir," he said. "They are, I venture to suggest, in the French language, but posted in Baghdad."

Chafik took the letters and glanced at the signatures. "Maurice," he announced. "And here on an envelope the full name—Maurice Lebrun."

"It is a French name, sir?"

"Lebrun, Maurice," Chafik said. "Age, twenty-seven. Place of birth, Paris. Came to Baghdad as cipher clerk to the French Legation in December, 1947. Lives at the Semiramis Hotel. A constant visitor to this house."

ABDULLAH pressed the palms of his hands together. "Madame was also young. I am informed the French are a passionate people."

"Your thoughts are impure," interrupted Chafik. He selected a letter and began to read with fluent ease. When he had finished he murmured, "But you are partly right. This Frenchman is passionate. It appears Madame confessed affection for Lebrun, but virtuously rejected him as lover. He begs her to come to him. He says she owes nothing to her husband, who is more interested in horses than in his young and beautiful wife—"

The Inspector stopped and turned to the picture on the wall, an oil painting by a well-known Baghdad artist, and an excellent likeness of Dr. Fadan on horseback. He was a man of frail appearance, his features finely drawn, his mouth rather too wide. But he sat the obviously spirited horse with authority, his hands iron on the reins.

"A strange picture to put above the bed of one's wife!" said Chafik. "But Fadan is a cripple—"

He continued reading Lebrun's letters. Although the correspondence was one-sided, the story unfolded was clear. The young people, Parisians brought together in a strange city, had found too much in common; but Naomi Fadan, with the marital loyalty of the bourgeois Frenchwoman, had rejected the appeals of her countryman.

The young man put himself at the feet of his mistress with the subtle obeisance of the Latin. He undermined her with tenderness; deployed the artillery of passion; launched massed frontal attacks.

The final letter, which was a week old, held Chafik's attention. He read it twice, the second time with judicial caution. Lebrun announced his impending departure for Paris, stating he had been recalled. He wrote, "Come to the city you love with the man you love. Do not choose death . . ."

Chafik placed the letters in his portfolio. His thoughts shaped an intricate pattern, and he said, "He may mean death of joy, the death of happiness. But what a singularly unfortunate word!" Hearing himself speak, he went to the window to hide embarrassment.

Below was the moonlit drive, partly hidden by the fanlike branches of a giant pride of India tree. A man came suddenly into view. He walked with a dragging motion of one leg.

Inspector Chafik drew back his head and said to Sergeant Abdullah, "Dr. Fadan has returned. There is no easy way to break the news to him. I must be brutal. When he sees me the news will announce itself. I carry the odor of death." . . .

Dr. Ibrahim Fadan stood in the study, leaning on the desk to take weight off his withered leg. He was gray with fatigue.

He said, "I do not understand. My wife was alone when I left. She had been unwell for some days and I made her go to bed before I went to the hospital." He raised his dark, tortured eyes to Inspector Chafik and asked, "Who did this thing?"

"My investigation has hardly begun."

"But you have some clue?"

"There are clues. But a pile of loose threads is not a Kirman rug. The weaver must make the design. There are questions to ask."

The doctor lowered himself to a chair. He picked up a silver statuette of a horse from the desk and fondled it. "The shock of your news is anesthetizing," he said. "I am ready for you, Inspector."

"First, at what time did you go to the hospital?"

"At nine o'clock—"

"The servant had left?"

"It was his free evening. He left at seven—"

"The operation you have just performed was an emergency?"

"No, Inspector. It was arranged several days ago. I operate at night because it is cooler."

Chafik lowered his head. "Forgive my clumsy indiscretion," he went on. "Did Madame expect a visitor?"

Dr. Fadan straightened in the chair. "What visitor?" he asked harshly.

"I speak of a young man who often comes to this house."

"So you know. The soil of Baghdad is indeed fertile for police eyes and ears." He made a gesture. "Forgive me. But I cannot answer your question justly. This Frenchman ruined my marriage."

Chafik thought of the letters in his portfolio. "You are sure?"

"What else?" demanded Fadan bitterly. "You can see I am a cripple." He struck the shortened leg with his fist. "Lebrun was young, handsome."

"Madame married you," Chafik said.

"Pity sometimes wears a cloak of love." Dr. Fadan rose, limped to the fireplace, and began rearranging the trophy cups and photographs of horses which littered the mantelshelf. "I let the Frenchman come to the house because my wife was lonely for Paris. I thought she would be cheered. When I realized what had happened . . ."

"I understand." The Inspector made an awkward movement. "But you forbade Lebrun the house?"

"Since last week. That is why my wife was unwell."

"Has he visited her secretly?"

Fadan shrugged. "My spare time has been devoted to my stables at Hinadi. I discharged the groom on Sunday, and installed another the following day. It was very late when I returned home. My ill luck with grooms continued," he added. "The new man died."

"Died?"

"A heart ailment. He was an old Bedouin from one of the Beni Sakr tribes, an excellent man with horses. I found him dead when I went to the stables Tuesday evening. He was buried yesterday. I was obliged to take back the old groom as a temporary measure—but this is unimportant to you, Inspector. I mention it to show why I have been absent from the house most of the week, and therefore cannot know if Lebrun made clandestine visits."

"I will question the servant."

"He was my wife's, not mine."

"What kind of man is this Lebrun?"

"Excitable. I would not care to thwart him. Inspector, is it possible—"

THE telephone began to ring. Fadan took it, then passed the instrument to Chafik. "It is a man named Yacoub."

The Inspector said to Corporal Yacoub of the Fingerprint Bureau, who was speaking from headquarters, "What have you?"

The excited voice of the expert answered, "I have classified the prints found on the lady and compared them with our records. The result will astonish you—"

"I am disciplined against astonishment. It is a weakness."

"Sir, I was led to the records of foreigners resident in Baghdad. The fingerprints were made by a cipher clerk of the French legation. One named Maurice Lebrun—"

Inspector Chafik made no reply. The stub of his cigarette burned lower. He was roused by the scorching of his own flesh and, as he put the blistered finger to his mouth, he reflected that his discipline had been faulty. . . .

The report which reached the desk of H. J. Ellsworth, the next day, was a summary of hard facts, written with the detachment of a judge. Ellsworth, a former Chief Inspector of Scotland Yard, now adviser to the Iraqui government on police matters, and director of the C.I.D., read it with approval, and then glanced at Chafik, who was perched on the edge of a chair.

"A messy case," Ellsworth said. "Have you traced Lebrun?"

"No, sir. His room at the Semiramis has not been occupied since Monday. There should be nothing unusual about this because he is often away from Baghdad on *(Continued on page 86)*

By ALASTAIR MACBAIN

GIRLS who grow up around dogs and horses learn to handle themselves. You see it in the way they walk and use their hands, in the way they hold their shoulders and carry their heads. Maybe it's a sort of animal gracefulness they have. Whatever you call it, a girl doesn't have to be pretty to catch attention if she has that all-important quality. Nancy Hames had more than her share of it. In addition, her face was right up to standard: She had dark, deep-set eyes, perfect teeth and a clean, nicely chiseled jaw.

I first met Nancy one afternoon while I was running a big-going English setter pup in the pine woods back of the farm. She swung her little Tennessee walking mare alongside my shuffle-footing mule, introduced herself as Tom Shelton's niece, and asked if she could tag along. Even though I was old enough to be her grandfather I got a kick out of having an attractive girl ride up unexpectedly in the middle of the woods. I told her I'd be glad of her company.

During the ride, she told me that she and her mother had been living with Tom since her father died. I knew that was like Tom—he was strong for kin.

When I took my pup to our local spring trial, Nancy invited herself along. On the way over she confided that she was going to keep her eye open for a promising youngster; she wanted a shooting dog of her own. She claimed that a good field-trial dog is merely a classy shooting dog putting on a show. In that case, I said, there would be plenty of handlers at the trial who would claim to have exactly what she wanted.

My pup was braced with a rangy go-devil setter named Scooter, belonging to young Dave Storrie. I guessed all we would see would be a dog race because my pup had ambition and leg enough without another

Naturally enough, it was the renegade bird dog who removed the bone of contention

It Happened to a Dog

of the same kind egging him on. I was wrong. Dave's dog ran like an all-ager. He could handle birds, and he was exceptionally good-looking for a setter bred on field trials. As good-looking for a dog as Dave was for a man, in fact. Nancy thought so, too. I introduced Dave to her, and then I didn't see her again all day until it was time to head home.

She was quite excited. Dave Storrie knew her Uncle Tom, she said, and though he wouldn't sell Scooter, he had an even better-looking, bigger-going dog—a brother of Scooter's—that was for sale. She was going to see him next day. I wondered if the "him" she was interested in was Dave or the dog.

WHEN I met Dave a couple of nights later at a church fish fry supper, he seemed pleased with himself. At last, he gloated, he had gotten even with old Tom Shelton. He hated to do it, he said, because Nancy seemed regular and was easy to look at, but he knew well that Tom had sent her to buy the dog for him. Tom wouldn't try to make a deal himself, Dave was positive, ever since the time he pulled a fast one on Dave, claiming he wanted a "gentleman's shooting dog" for a friend. Cheap. Dave sold him one for a hundred dollars. Before long Tom was bragging about having resold the dog for five hundred. Old Tom knew all along what he was going to get for that dog, Dave claimed. He swore then to get even. Now, Tom had played right into his hand.

It sounded reasonable. Tom is one of the last of the old-time dog breakers and dog traders, and he has a reputation for being crafty. I asked Dave what dog he sold Nancy. He reached in his pocket and brought out a sheaf of receipted damage claims.

"'I didn't lie to her, I swear," he said. "I answered every question she asked, absolutely honestly. By now, though," he grinned, "I guess she knows she didn't ask the right questions."

The claims added up to a lot of history for such a young dog. They showed that Buster, black-tan-and-white setter dog, owned by David Storrie, had killed twelve shotes, a calf, several dozen chickens, a ram and a pet raccoon. Dave had paid the claimants two hundred and twenty dollars.

Buster was the most promising pup he had ever owned, Dave explained. A real horizon buster—that was how he came by his name. But he was too smart to train. He learned early to get lost; he stayed away for days at a time; when he came home finally it was always on the end of a rope with an irate farmer on the other end, demanding to be paid before he would relinquish the dog. Dave told me solemnly that he felt Providence had made him keep Buster just so he could unload him on Tom Shelton.

The smug look left Dave's face suddenly. Nancy Hames and her mother had arrived at the fish fry. Dave mumbled something about not liking fish much anyway, and started to ease out of the church. Just then Nancy saw us and walked over, beaming. If Dave could have found a small enough mouse hole I think he would have crawled down it. He grinned sheepishly and turned redder than turkey wattles.

"I hoped you'd be here," Nancy said graciously.

Dave bluffed well. "Why, ma'am, I was hoping the same about you."

"I want to thank you for letting me have Buster," Nancy said. "He's a magnificent dog. And a real challenge. I only hope I can train him without ruining him. He's got so much spirit."

Dave glanced at me and swallowed. "You're not figuring on training him yourself?"

"Why not?" Nancy's chin *(Continued on page 64)*

Nancy walked ahead of the dog as the judges watched. She flailed the bushes and fired a blank and the birds burst out. Buster was steady to shot and wing

Billie Burke—Her Story

For years we've been reading this type of article. Some of them very good. Some have made us yawn. But here's the job we've been waiting for. Here's sheer delight, beautifully and skillfully written. If you don't agree—well, you need a rest or a doctor or something.—Ed.

By BILLIE BURKE as told to CAMERON SHIPP

PART 1 OF THREE PARTS

I COULD hear John Drew harrumphing through his dressing-room door at the Empire Theater, giving forth with those highly bred horsy noises which the Drew-Barrymore clan have so aristocratically made their hallmark.

I stood outside, in my new leghorn hat with the lilacs on it, with my hair fluffed out behind, and my little lilac-checked dress. With me was my new friend, Mr. Drew's niece, Ethel Barrymore, who had been sent to soothe the great man over the embarrassment of meeting a new leading lady with the impossible—absolutely unheard of—name of Billie Burke.

I have always been called Billie Burke, except for those eighteen improbable, glittering years when I was also Mrs. Florenz Ziegfeld, Jr. I find it a perfectly adequate name. It's an especially nice name for the skitter-witted ladies I play on the screen today, and it suits me, too, because I might as well confess here and now that I am not always saner than I seem.

We could hear Mr. Drew through the dressing-room door, as I was saying. Among his mutterings was the complaint that Charles Frohman would do anything so dreadful, absurd, and outrageous to him as give him a new leading lady named Billie Burke. A chorus-girl name. Bound to be a bouncing British blonde with buck teeth.

Ethel grinned at me and I grinned back, unconcerned. Why, it didn't mean a thing. I was only 21. I had come over from London to play a season in the provinces. I was fluffing my hair and preparing a theatrical smile for Mr. Drew when Ethel suddenly threw open the door.

"Uncle Jack," she said, in that wonderful, throaty voice of hers, "Uncle Jack, here is the little girl you are afraid of."

Uncle Jack turned and fixed me with his famous glare. You know, I believe it's a fact that the Drews and the Barrymores were born with built-in glares and sound effects, which they can switch on and off, like the Signal Corps. Mr. Drew glared. Then he opened his eyes wide. He said, "Why, come here, my dear child." And that was that.

I thought I had better explain about my name in the beginning because so many persons have asked me how I got it. Let me introduce myself properly: My whole name is Mary William Ethelbert Appleton Burke, I was born the year before the Statue of Liberty arrived from France, I have been an actress for fifty years, since Victoria was queen of England. And how do *you* do?

I acquired my full name, which certainly sounds as if it ought to wear a lorgnette, through a bit of ecclesiastical connivance with a British curate when I was twelve years old. This was the Reverend Samuel Kishborn, rector of St. Margaret's, Westminster. He was a kind man and also a dazzlingly handsome man, so naturally I wanted to please him. I told him the story of my father, who was born in Youngstown, Ohio, in 1848, and who was a clown with Barnum & Bailey's circus. His name was Billy Burke.

Billy Burke was a handsome clown. I am tempted to say a "pretty clown," because he had a round, open, generous face with sparkling blue eyes, always shining, and beautiful bright red hair. He did not wear tramp clothes or make himself up to look ridiculous. Instead, he was impeccably costumed in white, with a gorgeous white ruff around his neck, a chalk-white face, and a widely smiling pink mouth.

Billy Burke was a singing clown. He sang in a strong, high baritone such songs as "Brannigan's Band," "Dance with the Girl with the Hole in Her Stocking," and "Clara Nolan's Ball." And when he sang, the trapeze artists sat carefully listening on their wires, the roustabouts gathered around the ring, and the brass band muted its harsh blare. And, oh! how the girls listened to that man sing! He had the same effect that Sinatra and Bing have on the impressionable female today, and he was ever so much prettier.

Billy came to Pittsburgh with P. T. Barnum in 1883 and sang his funny songs. I am told that he was witty and clever with satirical pantomime. All the girls thought he was perfectly wonderful and he was invited to many parties. One of the young women who was smitten by Billy was a widow, a girl named Blanche Hedkinson from New Orleans, who had four children, by her first marriage and who, as I remember so well, had a very firm chin and inelastic will power.

I don't know too much about their courtship. They met at a party given by Mr. J. A. Bailey, Barnum's partner, and when the circus left town Blanche Hedkinson went with it, as Mrs. Billy Burke, wife of the singing clown. Blanche came from a family with aristocratic pretensions, the kind with a Southern accent, so you know how *they* reacted. Marrying a clown was unthinkable and they never spoke to her again.

I was born in Washington in 1885, so in spite of my London background, I am as thoroughly American as you can get, without a Cherokee or an Ojibway in the family woodpile.

We still have the telegram that Billy Burke, who was on tour, sent the day I was born. He said to my mother: "I don't care whether it's a boy or a girl, but does it have red hair?"

Mr. Bailey, who adored my father, was almost as excited as his chief clown. He wired from New York: "I will make you a firm offer of one million dollars cash for the *(Continued on page 73)*

the Tree of Heaven

In that endless summer came a misery against which she had no defense. In that summer she watched the death of love

By ELIZABETH ENRIGHT

THE tree was the reason for taking the apartment; or so Barbara liked to declare, forgetting or ignoring the fact that at the time it had been the only apartment she could find that she could afford.

She was a small-town girl, homesick and romantic. The city frightened her at first and when she had walked into the ringing bare front room of that apartment she had felt inordinately pleased at seeing branches beyond the filmed gray glass. Yellow leaves were dropping there, one or two at a time, random and drifting, a sad but inevitable statement of nature. In that manufactured background it seemed a good reminder of earth's healthy and relentless course. Barbara went to the window and, looking down, saw that the tree sprang in all its lofty strength from a space that was hardly more than a crack beside the front steps.

In a mute unpretentious way it seemed to be asserting that given an inch it is a positive virtue to take an ell. She was naturally pleased by this advice and pleasurably saddened, too, by the sight of the sailing leaves which brought to her mind the last scene of Tristan and the last scene of Cyrano and many other bittersweet leave-takings. Also, not incongruously, it reminded her of her parents' ugly but cozy house in Davenport, and fall days and school and the cracked enthusiastic voices of the male adolescents who had so suddenly changed from well-known children into thrilling strangers—

"It's nice having a tree to look at," she had said, turning to the landlady.

"Those trees, they're just like weeds," the landlady said gloomily. "I get exhausted just sweeping up the leaves." She was a pale, oyster-colored woman, squeezed and wrung out like a cloth. One could not imagine her laughing at a joke or putting her arms around anything.

But the landlady was of no importance.

"I think I'll take the place," Barbara said.

Having passed, all her life, through the stuffed comfortable rooms of her parents' house as blind and oblivious as a minnow among weeds, she now became house-proud and exacting. She and the painters quarreled and contended and came to an agreement about the blue for the walls. She haunted secondhand stores and bargain basements and among the clutter in her pocketbook there were always rags and tags of fabric samples.

She bought a sofa that she could not afford and some prints and a Chinese figure, and when the place was finished she felt a continuing pride and astonishment since this was the first entirely creative product of her life. Before the paint had lost its smell she brought her new friends in to admire the place; girls from the office for small dinners or cups of tea. She loved their screams of praise and envy which made her feel generous and favored. They confirmed the deep hidden suspicion that after all she *was* favored, endowed, blessed beyond the average in some mysterious way.

"Look!" she would say, going to the window and drawing up the blind. "It's too dark to see well, but right out there I've got a tree. Honestly, in New York City, a real tree!"

The last leaf had fallen long ago. The ailanthus branches with their bare blunt twigs looked like the antlers of reindeer. Peering out at them through her own reflection, Barbara regarded the tree as she did any piece of good fortune at that time: as a reward. A reward for what? she sometimes wondered carelessly. For being a pretty girl, ambitious, twenty-two years old? These seemed reasons enough.

The autumn had passed quickly and the city no longer frightened her. In the evening when she came home it seemed with all its spangling lights and deeps of shadow to be a labyrinth of mystery and promises, holding marvels for those who would explore it fearlessly— She even begrudged the brief Christmas holiday with her parents in Davenport and returned eagerly as soon as she could.

THE hard grind of winter began in earnest. The tree beyond the window vibrated to the north wind, and perched among the twigs sparrows were spaced like soiled and weather-beaten fruit. When Barbara went to work she walked with her head bent and with tears of cold in her eyes as the garbage men bowled ash cans across her path, like great trolls down from the mountain. She was wildly happy, for by this time she was in love, and nothing at all seemed ugly to her, neither the ash cans nor the frozen filth in the gutter nor the chapped calves of the bobby-soxers on the subway stairs.

Sometimes her happiness caused her to walk sedately as though she carried within her a spirit level that must be kept even at all costs, and sometimes it caused her to run the length of the block and spring from the curb with a hoydenish leap. The traffic cop smiled at her and so did the old woman selling pretzels and so did other blurred or elderly passers-by, as though by looking at her and signaling their benevolence they might share in her grace and joy—

She was glad that the winter was bitter because then she could have a fire in the old arched fireplace—another reward—and when Hugh, the one she loved, came in the evening they had a simmering, snapping accompaniment to their talk, and the walls of the room seemed to tremble and move under the many alternations of light, recalling to the deepest part of the mind that fire which always burned at the heart of magic.

When the time came for him to leave she used to go down the stairs with him and out to the front steps. Above them the bare silent tree was spread like a skeleton hand and above that—they always looked up—were the sparse city stars, or the moon rolling through rough clouds.

"You'll be cold," Hugh would say to her. "Go on in now like a good girl," and all the time he would be holding her close to him, his arms around her, and she, pressed to his coat, could feel right through it the large tranquil rhythm of his heart— Such a heartbeat could belong only to a man of strength and loyalty, she used to think, a man able to love lastingly and in many ways. It was a comforting yet lonely sound: the sound of another life walking its own path.

"Not yet," Barbara would say, and he would open his coat and fold it around her, and she could hear the heartbeat better and she was not cold at all. It was hard for them to say goodby, they lingered and lingered, cold though it was, and sometimes she would say, "Oh, come back in again!" and he would come— Nearly always when he got back to his place he would telephone and she, yawning, half asleep, warm in her bed, would talk with him, the two of them in the huge humming night city bound to each other by the small thread of their discourse and the intimate strength of their feeling for each other.

A city is a wonderful place to be in love in, Barbara used to think. Nobody notices or questions, no words of advice are offered and no confidences demanded. There are a hundred playgrounds for lovers and a thousand meeting places; the huge mumbling tide of other people only emphasizes the delectable solitude of the two—

"In the spring we'll go to the country on Sundays," Hugh said. "Take a ferry or a bus to somewhere or other and spend the whole day. A rural landscape should become you."

"We'll take a picnic basket," Barbara agreed happily; she was already planning its contents. Beyond this febrile, entrancing period she looked forward to a long life with Hugh in which she would cook good meals and make a pretty place for them to live in. They would eat and sleep and work and play together and out of their fused passion would grow fine children who would be sensible and beautiful and loved. They would have no dissensions, no worries (except the usual ones about measles and money and broken bones) and their lives would at last be so woven together with mutual experience and fortune that never, never could they be disentangled.

"Children do better in the country," Barbara said, apparently irrelevantly, *(Continued on page 80)*

Inside Sports

Collier's SPORTS

By BILL FAY

THE CARDINALS MAY NOT COP THE NATIONAL LEAGUE GRID TITLE BUT THEY HAVE A BIG ATTRACTION IN ELMER ANGSMAN

Angsman takes a pass from center. Davis of the Bears calls him football's fastest starter

ELMER ANGSMAN, the Chicago Cardinal halfback, bulled through the Philadelphia Eagles for a first down in the fourth quarter of the National League championship play-off last December. When the referee reclaimed the ball, Angsman and the Philadelphia tackler were sprawled on the frozen ground, headgear to headgear and cheek to cheek.

"Get this bum off me," Angsman complained. "He's trying to fog my glasses."

"What do you want me to do?" the referee inquired. "Penalize him half the distance to the goal line for breathing hard?"

There is no penalty in the football code for tacklers who make passes at halfbacks who wear contact-lens glasses. "That breathing trick never works," Angsman admitted later. "My contact lenses don't cloud up. Ordinarily, I wouldn't have minded, but that Philly tackler was chewing tobacco."

Angsman scored twice on 70-yard runs as the Cardinals whipped the Eagles. Even Elmer's severest critic—Fred Davis, the Bears' All League tackle—admits that Elmer is a hard man to meet on the line of scrimmage.

"There may be faster straightaway runners," Davis says, "but Angsman has the fastest start and that's what makes a back go places from the T formation—acceleration. Maybe this will give you an idea of Elmer's speed. He plays about four yards back of the line. Paul Christman, the Cards' quarterback, crouches behind center—so close he can bend forward and touch the ball. Well, once last year Angsman started so fast he was through the line before Christman had a chance to turn and hand him the ball. I came busting through from defensive tackle and Christman almost handed the ball to me. It all happened in the time you can count 'one—two.' "

Despite Angsman's speed and Charley Trippi's broken-field elusiveness, the Cardinals are not expected to retain their title. They haven't added much to their 1947 strength, and the possible loss of Marshall Goldberg (he may retire) at defensive halfback will hurt.

The Chicago Bears—stronger statistically than the Cards last year—have acquired Johnny Lujack, George Connor and Bobby Layne. They should win the Western Division title. The New York Giants loom strongest in the East.

Although heavy off-season trading was supposed to bring the top-heavy All America Conference into competitive balance, the Cleveland Browns shouldn't have much trouble capturing their third straight championship. The Browns' coach, Paul Brown, could give trading lessons to Branch Rickey and Joe Stalin. Brown did not contribute much muscle to the cause of All America solidarity. However, the New York Yankees, the Browns' loyal opposition, did trade off some prime football stock to weaker clubs—notably, a guard named Barwegan to Baltimore. If anything happens to Spec Sanders or Buddy Young, the Yankees may surrender their Eastern Division crown to (of all people!) the Brooklyn Dodgers.

But the sight to behold in pro football this semester should be Angsman of the Cardinals, the man who takes out his teeth and puts in his eyes before the opening kickoff. (Notre Dame provided Angsman with some gorgeous dentures after a Navy guard had strolled across his chin three years ago.) To complete the disguise, Elmer wears a steel splint contraption on his left hand.

WALKER'S FATEFUL FOUL

Richie Ashburn will not have to make any long speeches at the various winter banquets sponsored by local chapters of the Baseball Writers' Association of America in New York, Chicago, Boston and Philadelphia. When the time comes to accept all those plaques engraved ROOKIE OF THE YEAR, Richie can explain his startling center-field success with the Phils in nine words: "Gentlemen, I owe it all to a foul ball."

The foul was struck by Harry Walker (then National League batting champion) during a March exhibition game against the Cardinals. Walker deflected the ball so that it hit his left instep—and he went to a St. Petersburg hospital.

Manager Ben Chapman asked Coach Benny Bengough for a replacement. Bengough, who was directing the Phils' B squad, said: "Best I can do is that Ashburn kid. Hit pretty well for Utica in Class B, and we're moving him up to Toronto. Fastest thing you ever saw but awful green—and he's only 20 years old."

"We'll use him for a week," Chapman decided. So Ashburn went to center field for a week and stayed there all season.

Walker's unlucky swing changed the baseball fortunes of five men.

It canceled Ashburn's railroad reservation for Toronto, and eventually put Richie in the National League's starting line-up for the All Star game.

It demoted Walker from batting champion to utility outfielder and pinch hitter.

It brought about the release of veteran outfielder Roy Cullenbine, who had expected to assist Al Flair at first base.

And it set up the trade which sent shortstop Ralph La Pointe to the Cardinals for first baseman Dick Sisler (with Cullenbine gone, the Phils had to trade for first-base protection).

Of course, Ashburn would have come up to the big leagues eventually, foul ball or no foul ball. He's the fastest man going down the line to first base since Lloyd Waner. After *(Continued on page 54*

Chez Fleurette

By EDWIN RUTT

Collier's SHORT SHORT

PAPA PEREGEAUX was strolling the boulevards, on sprightly, if aging, feet. The springtime sun of Paris, mellow and not too warm, glinted blindingly off certain portions of the imposing Peregeaux person. For, aside from the frock coat, striped trousers and highly polished black shoes, Papa Peregeaux walked shoulder-deep in precious stones and metals.

A pearl stickpin adorned his dove-gray Ascot. The soft gleam of true gold arose from studs securing his shirt front. On one finger a mammoth diamond sparkled. Above these expensive accouterments Papa Peregeaux's eyes, blue and twinkly, gazed upon his beloved Paris with benignity.

Many saw him and thought, some a trifle enviously: There goes a man of substance. A banker or an industrialist, no doubt. And among the many who looked upon Papa Peregeaux was Fleurette.

Fleurette was small, chic, beautiful. And she happened to arrive at a street corner simultaneously with Papa Peregeaux. She said to herself, "Ah, what have we here? This could be interesting."

Papa Peregeaux looked down. His twinkly eyes met the huge violet eyes of Fleurette, until she looked embarrassedly away. But, going away, the violet eyes seemed to linger over the pearl stickpin, the studs, and, lastly, that monumental diamond.

The traffic halted, and Papa Peregeaux began crossing the street. But Fleurette was quicker. Fleurette got ahead of him. Near the opposite curb she surreptitiously unclasped her handbag.

That particular Parisian sidewalk was providentially deserted. Fleurette took advantage of this. The handbag slid from beneath her arm.

Compact, lipstick, loose change, bill purse, cigarette case, cigarette holder and other feminine paraphernalia fell out. Some of the change and a small circular cardboard box rolled into the gutter.

Papa Peregeaux had halted upon her heels.

He surveyed the ruin with dismay. After which he lifted his hat. "Tsk, tsk," he exclaimed. "This is most distressing. Permit me, Mademoiselle—"

"Monsieur is kind," Fleurette murmured.

With gallant disregard for his knife-edge trouser creases, Papa Peregeaux bent. He collected the errant impedimenta, handling each item almost reverently. For a second, indeed, he reverenced the little circular box. But finally he arose and made her an Old World bow. "*Voilà*, Mademoiselle!"

"Oh, Monsieur! How can I thank you?"

"Perhaps," he ventured, "by accompanying one old enough to be your grandfather to yonder café? For an *apéritif?* Not, *certainement*, that a lady of your station habitually tolerates the society of strange men."

Fluent old party, thought Fleurette. But aloud: "*Mais oui*, Monsieur, at any other time. Now, however, I am hurrying home. To receive an important telephone call."

Papa Peregeaux looked disappointed, crushed even. And Fleurette took instant pity on him. "However—" she began, but stopped. "No, I cannot. It would appear too forward."

"Not, my dear, to me," Papa Peregeaux assured her.

"We-e-ll," Fleurette said slowly. "I was about to make a rather bold suggestion. That you come for coffee to my little apartment, but a step from here in the Faubourg Saint-Germain."

Papa Peregeaux's eyes lighted. "But how charming! We shall walk and get acquainted. Now I am no one except Old Papa Peregeaux. And you?"

She took his arm, prettily. "You may call me Fleurette."

"With your permission," he said, "I shall call you 'Fleurette, my pet.' My age—" . . .

The apartment in the Faubourg Saint-Germain was small, cozy even. But Papa Peregeaux raised bushy white brows slightly. The place had not the fastidiousness of Fleurette herself. Nor had it a lived-in look. The furnishings were plain, utilitarian.

Yet there were touches. Like those exquisite silver candlesticks on the mantelpiece, the old hand-wrought snuffbox, that one really good print. He toyed, rather fancifully, with the idea that these were heirlooms and that Fleurette sprang from some great but impoverished family.

Fleurette, twisting a gold bracelet on her wrist, interrupted his reverie. "You will have coffee, Papa Peregeaux?"

"*Mais oui*, Fleurette, my pet. If it is no great trouble."

"Poof!" Fleurette disappeared into her kitchen.

Left alone Papa Peregeaux reconnoitered discreetly. He peeped into a tiny bedroom, into a tinier bath. But he was sitting on the couch when Fleurette returned with the coffee.

Papa Peregeaux took a tentative sip, then set the cup down. Fleurette, watching him, pouted. "You do not like my coffee, Papa Peregeaux?"

He protested, violently. "On the contrary, it is nectar. But such coffee should never—ah, I exceed the prerogatives of a guest."

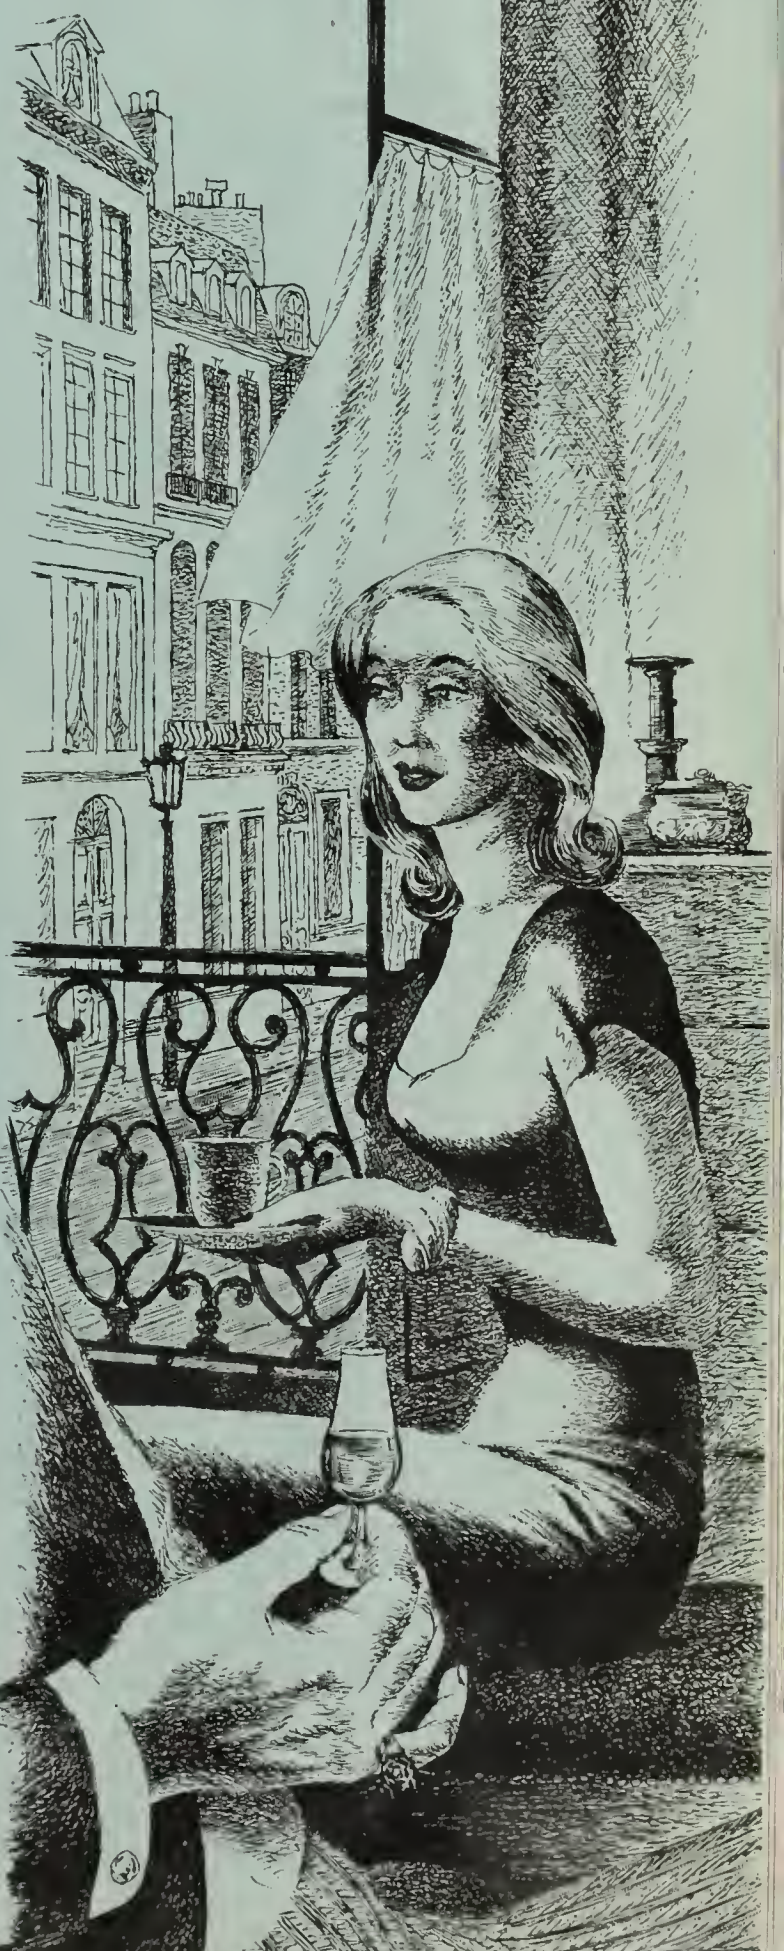
Fleurette was quick to comprehend. "No, no! It is I who am an indifferent hostess. You wish cognac with it, *naturellement*."

She clattered away. Papa Peregeaux waited, strangely restless. Especially his hands were restless.

Fleurette brought cognac. Papa Peregeaux drank then of both beverages, deeply and with enjoyment. Fleurette took only coffee.

"And now, my pet"—he drained the cognac glass—"you shall—*mon Dieu*, is something amiss?"

She had put a hand to her head. And she was looking at him queerly, a kind of mist over her eyes. "I—I do not know. I feel sleepy, a little faint." Then, suddenly the eyes hardened with comprehension. "Why, you—you—"



Abruptly she ceased. Her head dropped.

FLEURETTE awoke. For a moment she lay blinking, aware only of a tumultuous headache and a parched throat. Then, dizzily, she sat up and the room with its familiar objects took shape. But some objects were no longer present. Notably her silver candlesticks. And where the snuffbox had been there was a sheet of paper. Fleurette reached it on uncertain feet.

> "Do not reproach yourself, Fleurette, my pet. In our allied racket (an Americanism I deplore) Seniority is paramount. And I, Peregeaux, have Seniority, another way of saying: 'Peregeaux is Experienced—Peregeaux is Wise.'
>
> "Your racket (vulgar term) is luring elderly gentlemen to your various temporary addresses. I felt it instinctively, *chérie*, when your eyes avariciously caressed my modest personal adornments on the street. I suspected more strongly while retrieving the small, round box. An apothecary's box and labeled. *Tiens*, what a powerful opiate! Had 'Old Papa Peregeaux' not switched coffee cups as you procured his cognac who knows what vacant lot he might have awakened in—deposited there doubtless by some taxi driver of your acquaintance? But I became truly convinced when, knowing your concern about a telephone call, I apprehended no telephone in your charming ménage. These are errors on your part, Fleurette. But take courage! With Seniority, you will master your profession.
>
> "My racket (loathsome word)? Ah, merely to array myself fittingly and appear to succumb to *your* racket.
>
> "Au revoir,
> "Peregeaux
>
> "P.S. Your excellent pigskin suitcase will be of inestimable aid in removing bulkier items, which might otherwise excite the curiosity of such as concierges and gendarmes. P."

Then, indeed, did Fleurette fly into a rage—as fine a rage as ever has been seen, in the Faubourg Saint-Germain. ★★★

Papa Peregeaux drank deeply of both. Fleurette had only coffee

Marriage '48

By VERA CASPARY

Continuing the dramatic story of three modern wives

The Story: LILITH CLARK, an interior decorator, is being married to DR. HENRY FOWLER who has insisted that they be married in the Little Church in the Vale. Lilith has been married twice before. On their way there she recalls an item she has read in the morning papers: One out of every three marriages in 1948 is doomed to fail within a year's time. They arrive late at the Little Church and Lilith goes immediately to the Bride's Boudoir. Another girl is there, HELEN WOZZECK. Helen is being married for the first time to BILL SNYDER and she lends Lilith a blue garter to fulfill the sentimental requirement. After her marriage, Lilith is at the wedding breakfast when she discovers that she has left her cigarette case in the Bride's Boudoir. Henry drives her back and at the church Lilith encounters CAROL MCANDREWS who is being married to DAVIS BARNES, JR., son of DEPENDABLE DAVIS, the used-car king. The reception after Carol's wedding is held at the home of MR. AND MRS. BARNES, SR., and the champagne flows too well. A tipsy bridesmaid accuses Davis of jilting her. Carol had not known about this before and she feels a little frightened, and thinks: How could a girl who has known Davis' love go on living without it?

PART 2 OF FIVE PARTS

NO MATTER how alarming the statistics, how dire the prophecies, how gloomy the warnings, people go right on getting married. Divorce? Certainly it's frequent, but not in our family. Danger? Plenty of it for other people. Of the three couples married that morning in the Little Church in the Vale, the only ones to give a second thought to the doleful newspaper item were the Fowlers—Lilith and Henry.

To such people as Helen and Bill Snyder, divorce was merely an item in the newspapers. They were Catholics, and it was not common in their world.

In the world of the young Barneses, divorce was as prevalent as stomach ulcers. But these two felt that they were different, theirs was romance, pure and untouched. Theirs was truly a love match.

The fact that Davis had been in love before she met him did not alarm Carol. With his charm and ardor it was inevitable. And Carol had herself, in the years between the paper-doll weddings and her own, been in love too.

To exorcise the ghost of Davis' old love, Carol decided to make him talk. "Tell me about Betsy," she said as they drove through the hills toward Carmel where his parents, in order to match her mother's generosity with food, wine and flowers, had engaged a bungalow for the honeymoon.

Davis laughed. "Can I help it if she thinks she's in love with me?"

"Did you ever—I mean—"

"She meant nothing to me, I swear it."

"You called her Babe."

This startled Davis. Babe was his name for every attractive woman. "Jealous, huh?"

"Certainly. I'm the jealous type."

"You should've warned me. If there's anything I loathe it's a jealous woman."

"Want to turn back?" she teased. "While there's still time."

"Time for what?"

"Annulment. Before the marriage is consummated, you know."

Davis' right hand left the wheel and found her left hand. "Don't kid me, Babe. I'm a sensitive character."

Davis drove at eighty, speeding around curves, sliding down the steep hills, passing trucks on the upgrade. She forgot her fear of losing love in the larger, more immediate fear of losing life. But she did not speak aloud of the danger for he disliked nothing more than being told to drive carefully.

It was Carol who noticed the siren, but when she warned him, it was too late. "Now don't tell me you were only doing fifty," the cop said. "It happens I got a speedometer on my bike and it also happens I can read. Got a license?"

Although Davis had been in trouble with the police and had once lost his license, he was not alarmed. "You wouldn't stop a man on his wedding night, would you, Officer?"

"That's a new one," the cop said.

"Don't you believe me?"

"Your license, please."

Davis whistled The Wedding March as he searched his wallet.

"Hey, this is no driver's license," the cop declared.

"You asked for my license, sir," Davis answered jauntily, "and since we'd been talking about my wedding, I supposed you meant my marriage license. Now . . ."

The cop laughed.

"What do you think of the bride? Pretty, isn't she? Can you blame me for hurrying?" From the seat of the car and from Carol's skirt, Davis had scooped up some grains of rice. "If you'd like additional proof, Officer," he said and dropped the rice into the policeman's palm.

What can you do about a man like that? The cop enjoyed his insouciance.

"Well, good luck to you, ma'am. And if you want to enjoy your married life, see that your husband keeps down to forty on these curves. Good luck," and he mounted his motorcycle.

For the next few miles Davis kept down to forty, Carol felt so safe and happy that she forgot everything that had troubled her, the farewell to her mother, the disgruntled bridesmaid. Abruptly the car jerked to a stop.

"What's the matter?" she asked. "Why are you stopping?"

Davis got out and ran around to open the door for her. "Come on," he said, extending his hand.

"But why? What's wrong?"

"We're staying here tonight."

"Here?" She saw that he had pulled up in the driveway of a roadside hotel. "But we're not there yet, we're still miles and miles away."

"Too many miles." He took both of her hands and urged her out gently. "I've been waiting for you so long, Babe, I don't want to wait any longer."

The dry warmth of his hands, the ardor of his voice sent a flash of electric excitement through her. The inn was built in the Spanish colonial style, its balconies twined with honeysuckle. "Come along, Babe," he whispered, still clinging to her hand, and as she followed him through a series of arched doors and through a long tunnel-like corridor, she knew that nothing in her life had matched her love for him, and that from this moment and forever after, nothing else in her life could matter.

IT WAS very different with Helen. She had not had a modern education. What she had learned of life in the slums of a mining town had not been romantic. No one had ever told her about the birds and the bees. She was a "good girl" and, therefore, innocent, but she knew that on her wedding night her popular-song and motion-picture concept of love would have to be surrendered.

Just the same she was frightened, so frightened that the very earth had become unsteady. Everything moved. The waves of the Pacific rolled high upon the beach and fell back again, the stars danced overhead, and the chains of neon lights swayed against the darkness. She was dizzy, made sick by the wine or the wedding dinner or the motion of the car.

Bill looked grim, himself, as if he had had too much wine or chicken or spaghetti. But he had hardly eaten; Helen had noticed this particularly and remarked upon it. They had ordered the

(Continued on page 30)

It looked innocent enough. Why shouldn't Davis lean close to Lilith to light her cigarette?

Oil Below The Rio Grande

By FRANK GERVASI

America needs the oil in Mexico's undeveloped fields for hemispheric safety. Mexico needs U.S. dollars. But between the two countries lies many a political barrier for the co-operative Alemán Administration to hurdle

UNDER the malarious jungles of Mexico's Gulf coast, lies a patrimony in petroleum. As yet, no one can tell exactly how large it is. But it is known to be big enough to make poverty-burdened Mexico potentially one of the most prosperous countries in the world. And, more important, big enough to ensure the security of the whole Western Hemisphere in wartime.

One expert, a Brooklyn Irishman named John Slattery, who has spent 23 of his 50 years studying Mexican oil fields, has estimated Mexico's oil hoard at anywhere from 5,000,000,000 to 50,000,000,000 barrels. These deposits, lying beneath the Mexican portion of what oilmen call the Reynosa Formation which begins in Texas, represent from two to possibly 20 times the total new reserves of 2,750,000,000 barrels proved in the entire United States in 1947.

Defense Secretary James Forrestal and others en trusted with the security of the Americas have bee desperately seeking a petroleum source clos enough to be defended. They know that if the col war boils, distant sources in the Middle East woul fall to the logical enemy—Russia.

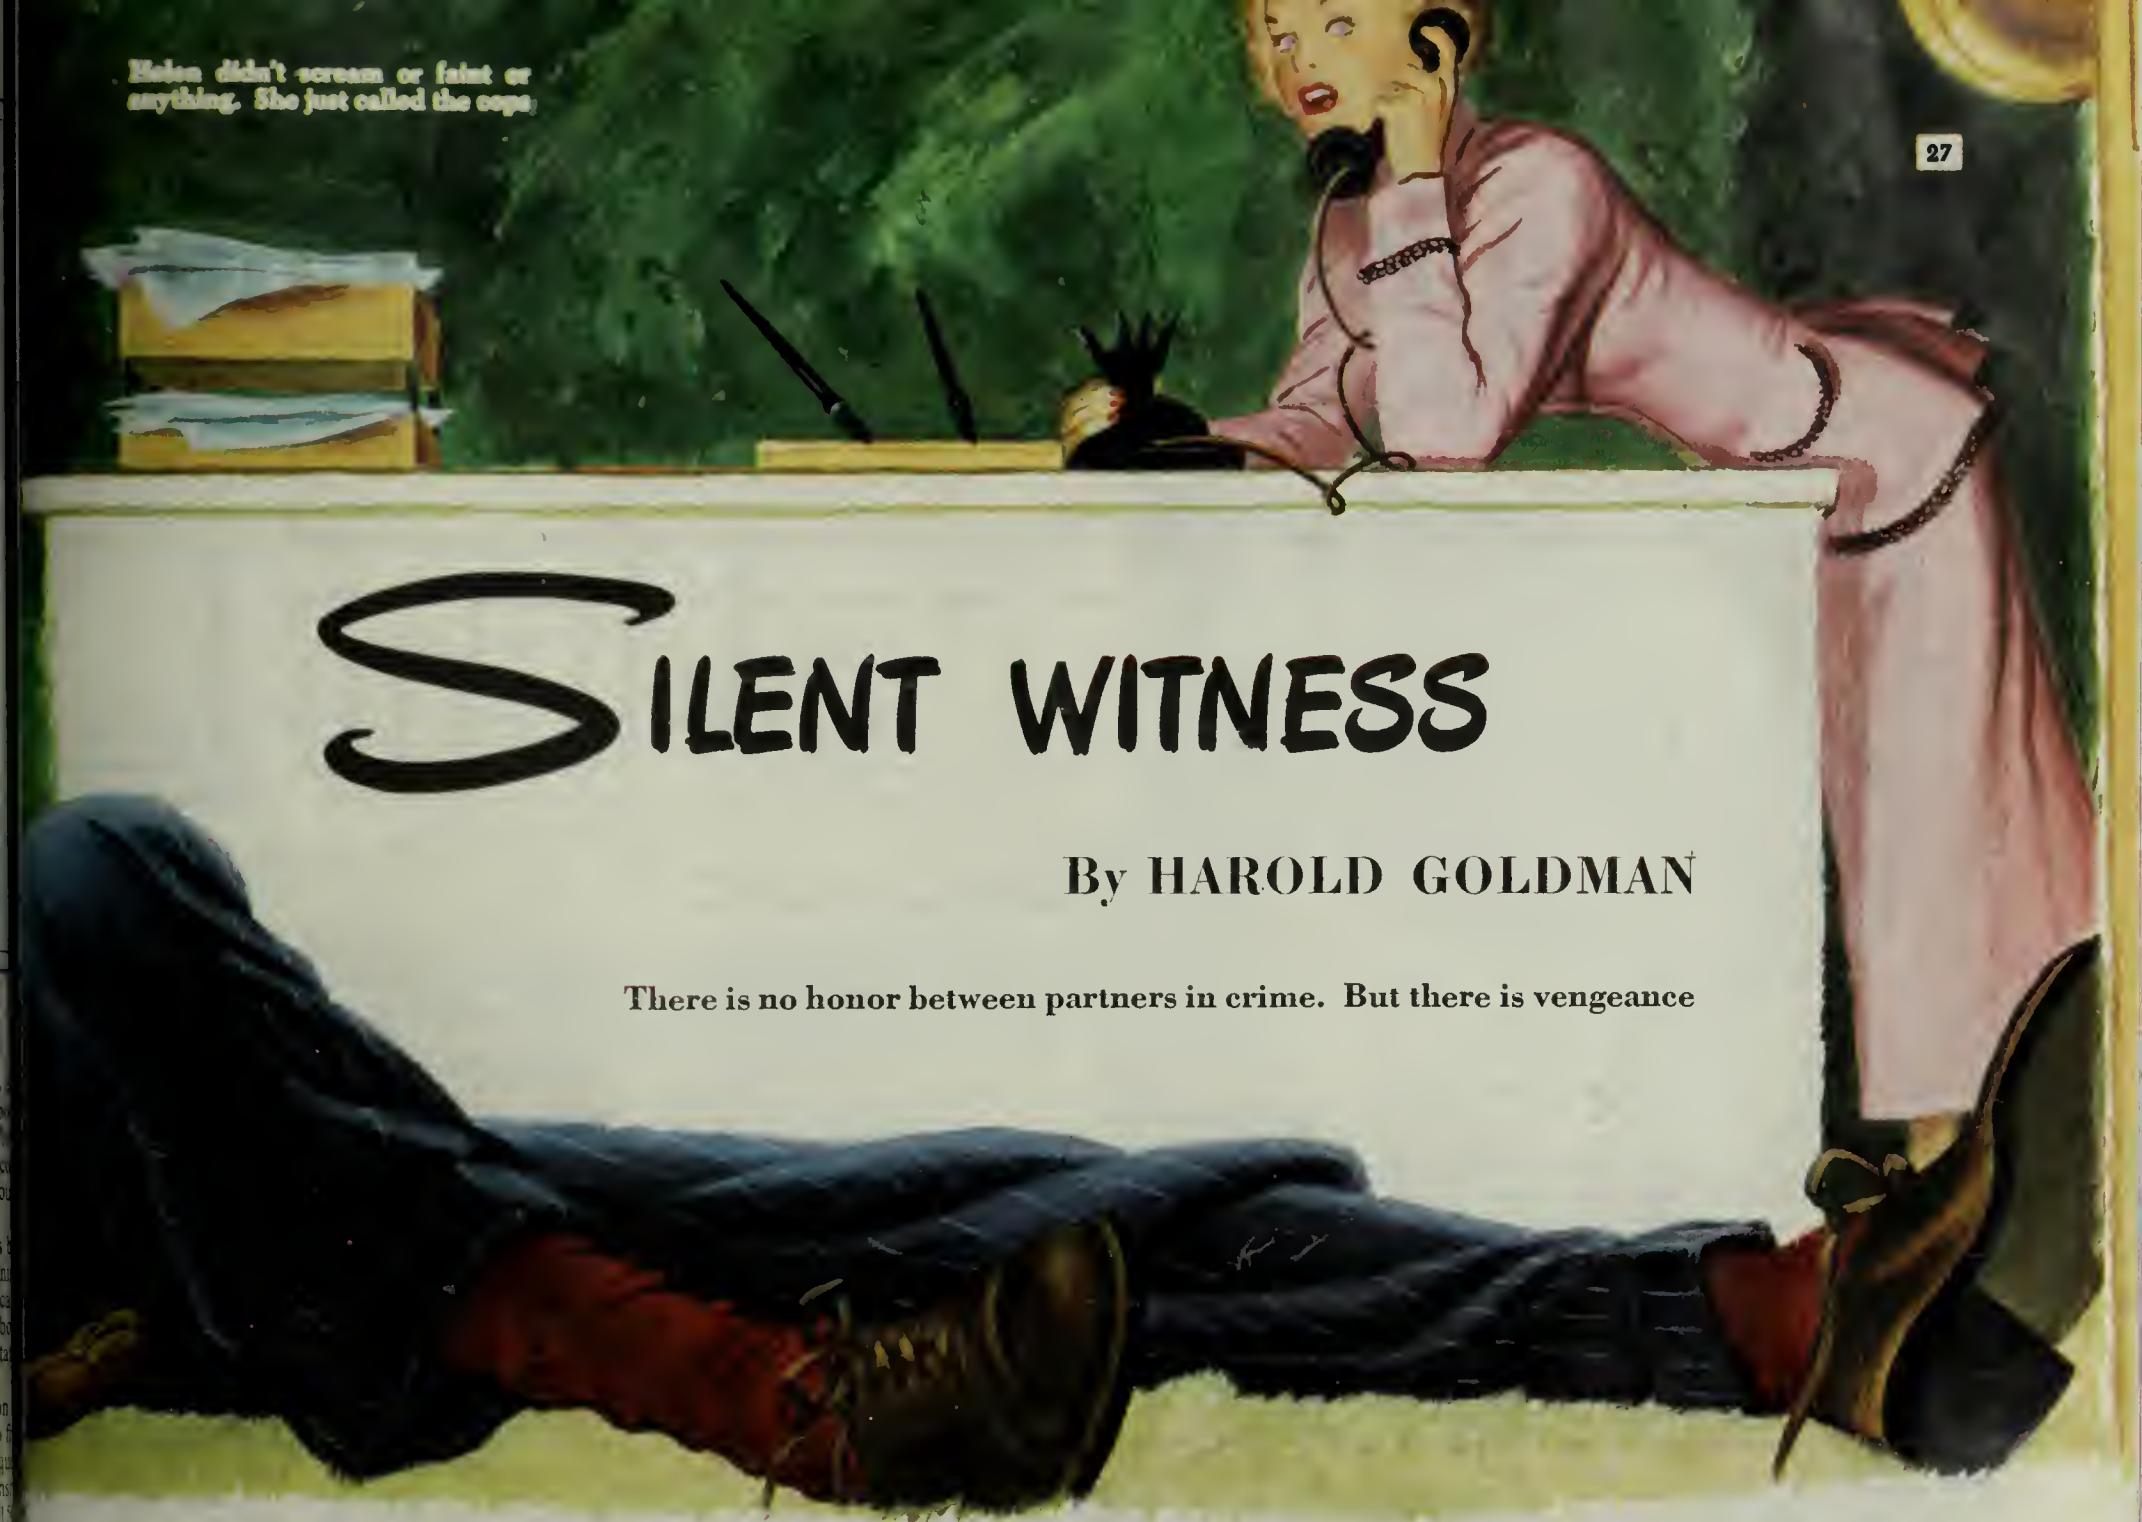
War may never come. The battle for oil has be gun, however. Russia dominates the Rumania wells, and is seeking new fields in Iran. America i pushing development of Arabian deposits. But bot time and distances work against the United State in the oil contest between West and East.

The drilling of exploratory wells and erection o refineries in Mexico would require from two to fiv years, oilmen have estimated. It would also requir money. Oil development is a risky and expensiv business. According to Slattery it would cost $150, 000,000 to drill 1,000 exploratory wells in Mexico An additional $100,000,000 would be needed fo refineries and pipe lines.

There isn't that kind of money in Mexico. An if there were, Mexican capitalists would not risk it They are the kind of sure-thing bettors who insist, banker friend told me, on a 15, 20 or 50 per cent re turn on any investment. They would not tak chances on drilling and not finding oil.

American capital is the only possible source o the huge stake required to tap the reservoirs o Mexican oil. But United States companies remem ber March 18, 1938. On that day General Lázar Cárdenas, then President, threw foreign petroleun firms out on their collective derricks. American valued their holdings at $200,000,000. They wer eventually paid $40,000,000.

Until Mexico creates a political, labor and lega climate favorable to American investments, Mexi co's petroleum will remain rock-bound in wha geologists call "the cretaceous tertiary contact. Can this change of climate be induced? Principally the answer rests with Mexico's darkly handsom President Miguel Alemán—in his ability to over come the difficulties created by those groups wh oppose American participation in Mexico's eco nomic development; in his ability to put an imme diate end to the corruption which threatens t wreck his administration.



If Alemán were a dictator there would be n question of the availability of an oil supply hand to American war plants. But Alemán is not a dic tator. He is an honestly elected President, whos most immediate trouble, although not his bigges is lack of money.

One way of encouraging United States oil mone to flow back into the country would be for Mexic to agree officially that "expropriation must be fo lowed by prompt and adequate compensation. This idea was incorporated in a resolution pr sented by Secretary of State Marshall at the recer Pan-American Conference in Bogotá. Mexic promptly objected. *(Continued on page 5*

The future has a grim look to this worker and the Mexican oil industry as a whole. Without U.S. capital and know-how, production is faltering south of the Rio Grande. But the Yanqui operator is not welcome

SILENT WITNESS

By HAROLD GOLDMAN

There is no honor between partners in crime. But there is vengeance

I THOUGHT I'd better make the call from the office of the telephone company. I had to call exactly at three and there were a lot of booths there, so it wouldn't be likely I'd have any trouble. It seemed better than using some obscure shop where you might just possibly be noticed and remembered. Besides, the telephone office was less than half a block from my own business building, and a lot depended on my getting there fast after I'd made the phone call to Larry Blakelock.

I closed the door of the phone booth and looked at my watch. It was set to the same second as Al's, who was sitting in my home about five miles away in Brentwood Heights, waiting to do his part. He would be asking the operator for the same number at exactly this time, so that there'd be a record of a call from my house.

I waited until exactly three. My throat was really in bad shape, my voice little more than a rasp. I'd had an ugly laryngitis for a week or more and I hadn't been to the office in all that time. It was a genuine case all right, but Dr. Winters couldn't understand why I didn't seem to respond to his treatments and medications. I could understand it fine, because I was pouring them into the sink as fast as I got them and smoking enough cigarettes to keep my vocal cords good and angry. As a matter of fact, it was the loss of my voice in the first place that gave me the idea.

I dialed my own office number, knowing that Blakelock was sure to be there at that time. Helen answered from the switchboard in the outer office.

"How are you feeling, Mr. Jarvis?" she asked.

"Not bad, but I'm still in bed. Winters won't let me up until we get rid of the inflammation. Is Mr. Blakelock in?"

I gave him the same thing I'd said to Helen.

"Take it easy," he warned. "You sound terrible."

"Just the voice," I said. "What's happening?"

He gave me a quick review of things at the office, new orders and shipments—but naturally, only the straight stuff. We were always careful over the telephone. I put in an occasional comment, asked a question or two. I knew Helen would be listening in from the switchboard. It wasn't only that this was her usual practice, but Blakelock and I had had some pretty healthy rows during the past month which she had overheard—although she didn't know what they were about—and I figured she'd be curious as to whether there'd be another blow-off right now. That was fine for me. I wanted her to hear every word. There must never be any doubt in her mind that it was actually I who was on the other end of the phone. After all, she'd be the only one who'd be able to swear to it.

I suddenly interrupted. "Hold it, Larry," I said. "There's someone at the door. It may be the medicine and I'm alone. Call me back in fifteen minutes, will you? I want you to do something for me."

I hung up fast, looked out to be sure there was no one I knew around, and walked round to the alley behind the firehouse that led to the service entrance in the rear of my office building. I had parked my car there in the first place. No, not my car. I'd left that home. It was Al's little coupé—just to show you I wasn't taking any chances.

There wasn't a soul around—there never was, in that rear alley—as I went up the back stairs to my office. The corridor was clear as I walked to the door of my own private office, softly unlocked it with my key and went in.

The door between my office and Larry's was closed as usual. There was small chance he would come in for any reason. I sat at the desk and waited, my ear close to the wall to listen to the call he'd make any moment now to my home.

It couldn't have been more than a few seconds but it seemed a long wait. I wasn't lashing myself into a fury or anything like that. I didn't need to get up my courage suddenly for something I'd had in the front of my mind for so long. In fact, I wasn't furious at all. But I was scared—scared of what he might do unless I kept him from doing it. He should have made up his mind before we first went into partnership that this wasn't for him, that he wanted to play it straight and aboveboard.

We were the West Coast agency for a big drug firm in Kansas City, specializing in vitamin products, and we were doing a good job on sales and distribution. But that didn't mean a thing. It was just a front for what happened after we'd monkeyed with some of the little capsules, so that they weren't exactly vitamin products any more when we got through with them. Al—the fellow who was sitting up at my house right now waiting for the call—got the stuff right from the harbor at San Pedro, and Larry and I had our own contacts for disposing of it. It was smooth and easy and, so far, there hadn't been a whiff of anything that might interfere with our own notion of free enterprise. Larry'd picked a fine time to get religion over it. I wouldn't have minded his getting out and leaving it all with me. I didn't specially need him anyway. But I didn't like his eyes when we talked about it. He didn't threaten or anything. But I was getting too nervous about him really to enjoy my six separate bank accounts

I could hear him in the next room, busy at his desk at one thing or another, and then I heard him buzz Helen on the phone and say, "Get Mr. Jarvis at his home, will you? I promised to call him back." *(Continued on page 57)*

How to Keep Out of Trouble

By HOWARD WHITMAN

Hermits and saints may skip this one. It's for the rest of us mortals, who sometimes find we "can't get along with" our mothers-in-law, bosses or other frictional characters

THREE years ago some of the best brains at Harvard University harnessed themselves to a new course dealing with the primary ill of all human existence: that ubiquitous ole debbil called *trouble*. How do people get into trouble? Once in it, how do they get out of it? Now—after much cogitation, experimentation and research—the Harvard seers have come up with some, though certainly not all, of the answers.

"Trouble" is just any everyday human problem which has been fouled up. The recipe is an easy one. Take two or more human beings, add a cupful of day-to-day experience, spice with human emotions, add a pinch of high tension, mix well and—there you have it.

Problems will always be with us. Problems are life, and life problems. The staff of the Human Relations experiment at Harvard College, realizing this, have concentrated on the methods of dealing with problems. Problems won't hurt us so long as we cope with them. It is only the problems we foul up which get us into jams.

Harvard College's program has been directed by Professor Wallace Brett Donham, former dean of the university's famed Graduate School of Business Administration. At his elbow have been researchers and instructors trained during two decades by the eminent George Elton Mayo, retired Professor of Industrial Research. Nineteen deans and professors from Colgate, the University of Kansas, Ohio University, Texas Christian, the University of Washington, and Worcester Polytechnic Institute have aided in the experiment.

It has been called simply Human Relations.

I strode across the elm-shaded lawn of Harvard's famous Yard into aged and cavernous Sever Hall, where a Human Relations class was in progress. Here Harvard men and Radcliffe girls were grouped around a U-shaped table. They were taking apart the Case of Julia Damon.

Like the dozens of other "cases" which make up the grist of the course, the Case of Julia Damon (disguised by fictitious names and places) was a painstaking record of a real-life situation.

Dilemma for a Housemistress

Julia Damon was housemistress of a dormitory at Myer College for Girls. Her relationship with two seniors, "Tex" Farner and Faith Gantling, had long been skirting the edges of trouble. Now, just two weeks before comprehensive exams, the girls had come in late and signed the night book "on time." Reporting them might stop their graduation. Letting it pass might strengthen their rebelliousness. What should Miss Damon do?

The students went back three and four years into a carefully recorded case history. Tex, they discovered, had been extremely worried about her mother, who was suffering from angina. She was under pressure from her brothers to "make good" in college. A chemistry exam had almost thrown her. Both girls had been abandoned by the chums of their freshman year. Like a snarled ball of yarn, the case took considerable untangling.

The student who had said, "Miss Damon *must* report the girls!" realized how much he had missed of what his professor called the "total situation."

And the student who had urged, "Let it pass," realized he, too, was wrong.

"What Tex and Faith really need is *help*," one student finally summed it up. Reporting or not reporting the girls was virtually immaterial. Miss Damon had a chance to counsel with them, help them see their own problems, help them become happier, less rebellious young women. That, the class decided, was what Miss Damon should do. That is what they thought *they* should do, given a comparable situation.

Every case in the course is similarly analyzed until what Harvardites call "the total situation" is laid open.

The Jinny Stover Case is searched for the reasons why nine-year-old Jinny refused to go to school.

The Case of the Seiton Family is sifted for the strange motivations which made each member try to please the others, while in reality nobody was pleasing anyone.

Why do human beings behave as they do? What forces are pushing them?

Whether in the home-town neighborhood or in the halls of the United Nations the art of getting along with others is becoming the prime art of our time. Says Donham, "We must all live with ourselves, with other individuals—and the process of learning how is slow and painful."

What can Harvard offer to you and me? What capsules of wisdom have come out of the searching years?

First, beware of logic. "Emotions are never logical and can almost never be changed by reasoned argument," Donham declares. "Anyone who has tried to argue the logical merits of a situation with an upset wife or child, particularly when he is himself upset, should know this."

One Harvard student almost disrupted the class by throwing "harpoons of logic," as lecturer Joseph C. Bailey put it, into every case that came along. He apparently confused men with machines, thought all you needed to do was push buttons, shift gears, grease up the axles. He had charted his entire career in cold logic. Two plus two would always equal four.

Eventually he discovered that where human beings are involved two plus two can equal five, fourteen, five million or zero.

Sentiments and emotions are the big sways in life. That's what Cardinal Newman meant when he said man is not a reasoning animal, but a feeling, seeing, hearing, acting animal.

The Professor's Unexpected Answer

One logical young law student jumped up in the Human Relations class and said, "If this is how people behave, I must change nearly all my concepts of the world!"

"Yes," was Donham's quiet reply. "Quite so."

The illogic of human behavior applies to the large arenas as well as the small. In a 1947 report Donham wrote:

"We tried to make students realize, for example, that Secretary Marshall on his recent trip to Russia faced the same necessity they themselves are meeting in the simpler cases . . . that he must understand not only the logical implications of facts as they concern people with whom he deals and as they concern us for whom he is acting, but also the prejudices, sentiments and emotions which enter into his problems—his and our own emotions as well as theirs."

Perhaps you and I can profit, too, in trying to understand a daughter who wants to smoke before she's old enough, a boss who is overexacting, a neighbor who wakes us up with his lawn mower, a wife who nags, a husband who picks fights, or a thousand and one human relationships where logic isn't the answer. Let's ask ourselves, "What emotions are involved?" Then let's go on from there.

Another thing they've learned to disdain at Harvard is the pat answer, the snap judgment.

"One student gave the entire 'answer' to a case in two minutes," relates Miss Frances G. Mulhearn, one of the Human Relations researchers. "He was trying to play God. That's something we just don't do." (And of course the student was wrong.)

The course also stresses the "equilibrium" in human relations. We are warned against being elephants in china shops. Since every human relationship is a delicate balance of dozens of factors, we must realize, Harvard tells us, that "if we change one of the factors, we may change many—perhaps all—of the factors."

The idea is to make our improvements so as not to break up the equilibrium, and to find out what improvements the people in the situation are themselves capable of making. As Donham points out, "It is quite a different thing to push a man gently and to punch him in the face"—though the hand may be used in both gestures. It's the timing that makes the big difference.

Donham's colleague in the Harvard experiments, Professor George F. F. Lombard, reminds us that "people get mad when you try to change them." Try changing your mother-in-law and see just what Lombard means. Instead of kicking over the apple-cart of a human relationship, why not give up the idea of "controlling the other fellow, and try controlling yourself *in relation to* the other fellow?" he suggests.

Often human relationships shipwreck on the rocks of *meaning*. Many a *(Continued on page 59)*

For three years, Professor Wallace Brett Donham of Harvard and associates from other universities did research for their pioneer course in Human Relations—the art of getting along with people.

Here are ten simple rules for keeping out, or getting out, of trouble, distilled for all of us mortals from the rich mash of the professors' collective experiences:

1. Learn all about a problem before trying to solve it. Listen a lot. Talk a little.

2. See the *total situation*. Don't act on just a part of it.

3. Don't be deceived by *logic*. Most problems are full of emotion. Emotions aren't "logical."

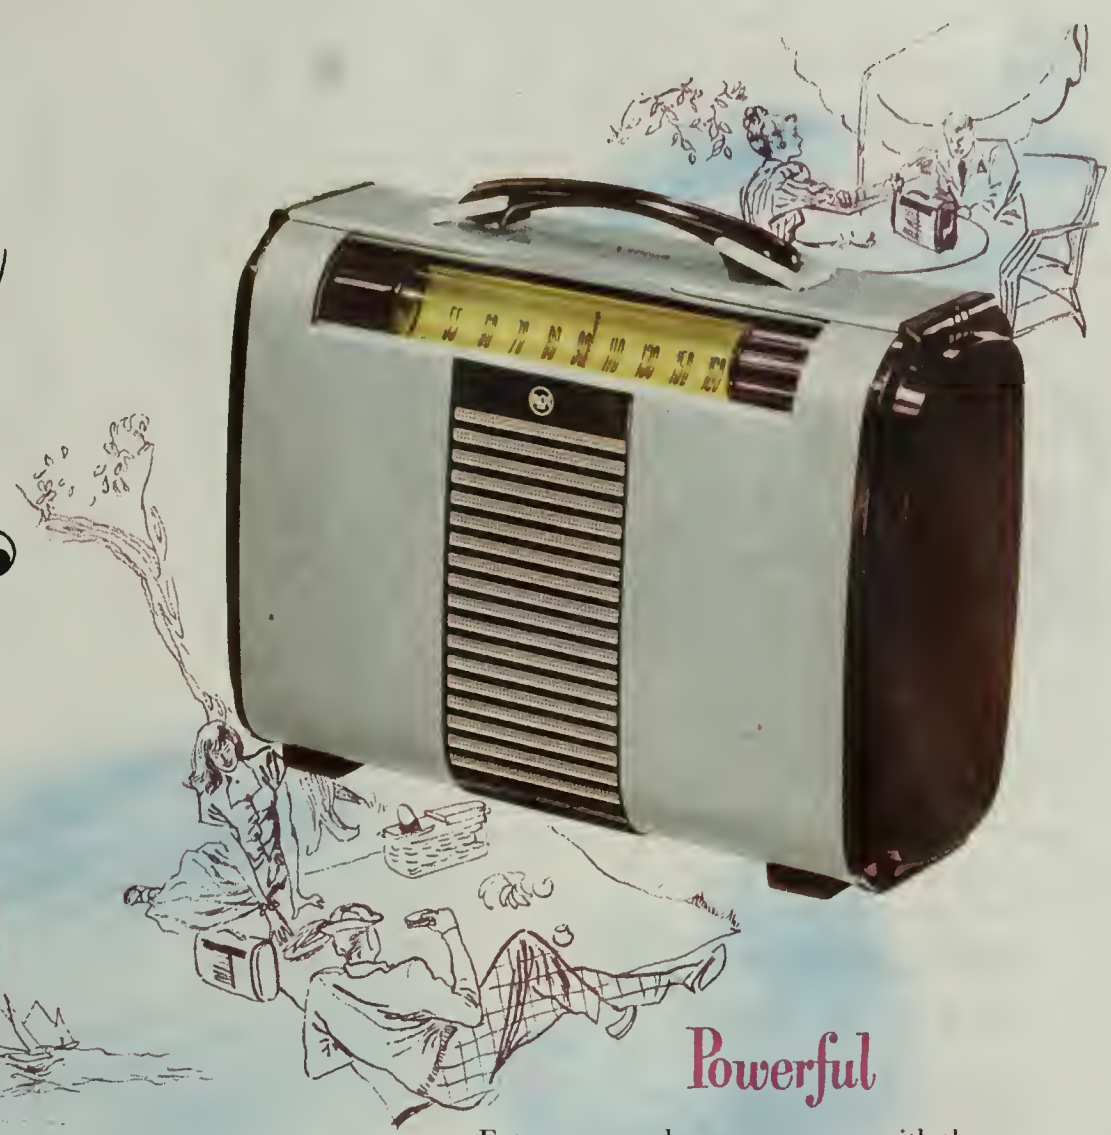
4. Watch the meaning of words. Look behind words to get their full impact.

5. No moral judgments, please. Until you have diagnosed a problem don't leap to conclusions about what's *right* and what's *wrong*.

6. Imagine yourself in the other fellow's shoes. See how the problem looks from where he sits.

7. When a problem gets you down, get away from it. Put it in the back of your mind for a week. When you approach it again the solution may be obvious.

8. Ask yourself, "What are the forces acting upon the other fellow? Why does he behave as he does?"



9. *Diagnosis* must come before *action*. Use the doctor's approach. Don't prescribe until you're sure what is wrong.

10. Easy does it. Quick solutions are often the quick route to trouble. Take your time.

The pick of the Portables

Powerful

Extra range and power are yours with the "Globe Trotter," amazing sensitivity, plenty of volume even for outdoor dancing. That handsome case is lightweight aluminum and plastic with a special, weather-resistant finish on the aluminum. Plays on house current (AC-DC). Plays on its self-contained RCA battery and turns on the second you lift the dial cover. It's a star performer with the marvelous tone of the famous "Golden Throat." $49.95* less battery.

Pocket Size

st 6¼ inches high, this tiny "Personal" gives you room-size volume. It's built like a fine camera, has rugged RCA batteries, tiny but sturdy RCA Victor tubes. Plays instantly when you open the handsome case. hoose *yours* in black, brown, ed or ivory alligator-grained plastic! $29.95* less battery.

the "Golden Throat"

FINEST TONE SYSTEM IN RCA VICTOR HISTORY

Always buy RCA batteries . . . they're radio-engineered for longer life.

Tune in Robert Merrill, singing "Music America Loves Best" . . . Sundays, 2:30 PM, EDT, on your NBC station.

**All prices subject to change without notice. Western prices slightly higher.*

Prudently Priced

Like all RCA Victor instruments, this stunning new portable is an outstanding value. It has fine volume and the glorious tone of the "Golden Throat." Plays on AC or DC house current or on its long-life RCA battery. Lightweight—in durable maroon plastic with non-tarnish golden finished trim and a handsome saddle of smart luggage-type covering. It's a welcome companion at home or wherever you go! $34.95* less battery.

MARRIAGE '48

Continued from page 24

wonderful two-dollar dinner at their favorite Italian restaurant. Their guests, Stan and Mildred Wozzeck, Helen's bridesmaids, the best man and a couple of other friends, had packed away food as if they hadn't seen a good meal in ten years. And the wine! The younger bridesmaid had said the most awful things, and Mildred Wozzeck laughed so loud that everybody in the restaurant turned to stare at her. In the end, when they were walking out she had nudged Helen's arm and told her not to be scared, just to take it easy, there was nothing to be afraid of.

"This looks like a nice place," Bill had said, and Helen, jerked out of her trance, had noticed that he had stopped the car beside a neon sign that turned his face quite pink. Midway Hotel, it said, Exclusive Cabins.

BILL jumped out of the car and went into the cabin that had a blue neon Office beside its door. She hoped the Vacancy sign was a mistake.

Through the window she saw shadows move. Bill was probably writing their names in the register, Mr. and Mrs. William V. Snyder. The V stood for Vito. His mother had been Italian. From her he had got his sleek good looks, his liquid eyes, the graceful body. He reminded Helen of Mexican songs, of the people in holy pictures. This love of the Latin ran through her blond family. Two sisters and a brother had married brunets. She thought of Bill's body tanned by the sun as he lay on her pale-blue beach towel. The ice in her veins melted and she felt alive again, eager to touch Bill's hands and to feel his lips on her mouth.

He did not speak as he got back into the car and started the motor. Helen decided the rosy sign had been a mistake, that the manager of the cabins had forgotten to turn it off when the last cabin was rented.

He drove a few feet, brought the car to rest under a roof beside one of the cabins. "Well, this is it." His voice was gruff, his lips rigid, and only the muscles of his cheeks seemed to move. Out of the trunk compartment he took their bags, his own old and battered with the number of his Marine company stenciled on the side, and hers, a shining new one of airplane cloth bound in maroon leather.

It was a very nice cabin, really de luxe, with cream-colored Monterey furniture, Mexican-looking rugs, candlewick bedspreads in a tasteful shade of brown, and on the wall her very favorite picture of a little Mexican boy squatting under a giant cactus.

Bill locked the door. Then he unlocked it again and looked out at the road. "How about a cup of coffee before we turn in?"

"Would you care for one?"

"I asked you."

"Not unless you do."

They heard the cars on the highway, the sea and a new record in the juke box. Bill pulled down the shades. He tried to appear unconcerned but his jerky movements showed that he was nervous. Helen was afraid she had made him angry again by refusing to have coffee.

"Well, if you don't feel like going out—" he left the sentence unfinished. With a jerk he loosened his good brown tie, and in the same angry way, he took off his coat and threw it across a chair.

Helen sat on the edge of the bed, shivering and trying to think of something nice to say to him. Presently, because Bill expected it, she began to undress. As she started to take off her stockings she noticed that she had only one garter on. This reminded her of the classy bride, Mrs. Henry Fowler, and she wondered how it would feel to be as casual about getting married as about eating in a new restaurant or moving to a different house.

Bill started on his shoelaces. He was having a bad time. After much tugging and jerking one of them opened, but the other was tied in a hopeless knot. It was clear that he hated himself for his clumsiness, but that he would not give in. He kept tugging and jerking, stamping his other foot on the bare floor between the Mexican rugs. Helen came over and looked at it, saw that the knot would never be untied, and shook her head.

This angered him still more. He turned his back on her, muttered a curse that might have been against women or shoelaces. All at once she felt sorry for him. Her own fear was lost in the greater emotion, sympathy for big clumsy creatures who strut their strength before women and pretend to be brave, but who are transformed by fear into silly, swaggering children. She was his wife, wasn't she, married to him in church that morning? Why was he so scared?

With a little skipping step she hurried to the new suitcase, took out plastic-handled scissors and returned to the chair where Bill sat sulking over a shoelace and punishing the floor with his other foot. Kneeling beside him, she cut the lace. "I can tie it in the morning, so you can use it till you get a new pair."

He did not look at her face but at her small hand resting on his knee. He laid his hand upon it, the dark flesh on the pale, the strength on the softness. "Hello," Bill said.

"Hello, yourself."

"Gee, we're married," he cried as if he had just happened to think of it. And he put his arms around her.

ECSTASY, Lilith thought, ecstasy is an ordinary thing, but intimacy is the soul of marriage. Careless couples destroy intimacy, foul it up with selfishness and discourtesy but wise husbands and clever wives cultivate intimacy as a fine art.

Lilith was lying, as she indulged in these exquisite abstractions, on her wide and comfortable couch in her handsome living room. She had on a negligee that was no less sophisticated for being pink and a single gold leather mule. The other mule stood on the coffee table along with her silver service, Royal Doulton cup and plates and the remains of a midnight snack. Her bare foot rested on Henry's lap.

Lilith moved on the couch, her negligee fell open and she saw a reddish ring circling her thigh just above the knee. She sat up to examine it, and Henry looked at it.

"What's that?"

"A scar, the scar of superstition. I'm probably marked for life because I married you today."

"What does that mean?"

She told him about the pale young girl she had met in the Bride's Boudoir, and the garter which had been loaned her for luck.

"And because you forgot to return it our marriage is destined for bad luck?" he teased.

Lilith pouted prettily. "It was stupid of me to forget. If only I had some way of finding her name and address, I could send it back."

"That's easy enough. All you have to do is look at the church register."

Lilith clapped her hands, looking up at him archly. "I knew I'd married a genius."

Lilith went on, "I met another bride too. When I went back for my cigarette case, she was up there getting ready for the grand entrance. Real lace and all that. You know what she reminded me of? Myself at my own first wedding."

As soon as she had said it, she was sorry. Henry was scowling. Over the champagne that morning she had promised him not to talk any more about her other weddings, her experiences and her husbands.

To cover up her mistake she chattered, "Just think, three of us married in the morning. Such different brides, too."

"Different grooms, also," commented Henry, smiling at the female tendency to believe that only women are sensitive.

"How different marriage will be for each of us. Nothing in common but a wedding day, but probably we're all starting out with the same hope of living happily forever after. If you believed in astrology, it'd make you stop and think."

"I don't believe in astrology but I do

still stop and think," he said. "Three marriages in a morning. That gives us a two-thirds chance."

So he had read the morning papers, too. His remark was a dead giveaway, evidence that he had also shown qualms. Why shouldn't he? How else could a man feel, marrying a woman who had twice failed? Damn all statistics! The surface of their intimacy was unruffled, but the depths had been disturbed.

To console herself she looked hard at Henry's profile, dark against the glow of the lamp. His face, like his character, was firm. He came from a tough people, Puritan stock and Quakers, rocklike in will power and endurance. "You're so good-looking," she said.

Henry smiled and turned toward her. Among the jutting rocks of his features were his eyes, blue as flowers. And the twist of a humorous mouth. "Now don't start that again, my girl."

"And cute, awfully cute."

"Is that any way to talk to an obstetrician?"

She fell back upon the cushions relaxed again and cozy. "You can be as obstetrical as you like, darling," she told him, "just so you don't bring any babies tonight."

As if it had taken a cue from her remark, the telephone rang. Henry ran for it. Lilith looked at the old French clock on the mantel. At this hour the call could only be for Henry.

"Are you going out tonight?" she demanded.

"I don't know."

"If you do—"

He took the phone from the cradle, but instead of answering, held his hand over the mouthpiece. "You'll what?"

THE air of judgment, of righteous interrogation made her defiant. She loathed men when they became masters. "I'll leave," she cried, not bothered by the illogic, not even remembering that this was her house and that if anyone left, the apartment and the furnishings and all the fine antiques were her property.

"Aren't you being a little premature? According to statistics, we've got a year anyway." And he turned from her coolly to talk into the phone.

She beat the sofa with angry fists. There it was again, that damned statistic, the specter at the wedding feast. And suddenly, as she looked up, she saw Henry smiling down at her childish fury. She hoped he would not notice that she was trembling.

He had been trained to observe the symptoms of weakness. "What's the matter?" he asked. "Someone walkin on your grave?"

"On my marriage license, someor with heavy boots and sharp nails," sh said. Abruptly then, before Henry coul tell her whether he meant to stay or g she flung herself at him, tucked herse into his embrace, crying, "Oh, darlin let's stay happy. Let's stay as happy a we are tonight, Henry." . . .

In August there was a sudden wave confinements. Among Henry's patien were women who had the poor taste bear their babies prematurely while otl ers, who seemed to have dallied wi theirs, chose the same or succeedir nights for labor. It made a mess of tl Fowlers' social life and kept Henry o at all hours. This made Lilith increa ingly resentful of his work.

One evening a quarrel was interrupte It was not important at the start, mere one of those Mr. and Mrs. argumer about a dress. They were to go to a do tors' party the following night, and Lili had suddenly decided that she had not ing to wear. So she had bought a ne dress and had to model it for Hen complete with sandals and long glov and earrings. When he saw her in Henry gave out a shrill and vulgar wh tle.

"You mean it's cut too low?"

"That crowd is pretty conservative

"I don't see why doctors should shocked by the human body. They' studied anatomy."

IF YOU'VE as much as looked inside a gorgeous New Hudson, you know that *all* of the gentlemen above are not only going to be seated, but seated in comfort and luxury that sets a new standard for the motor-car world!

For Hudson—the lowest-built, most streamlined car on the highway—has *more* head room and *roomier* seats than in any mass-produced car built today! This astonishing roominess is achieved by a new design principle, the key to which is a recessed floor. Hudson is the only car you step *down* into! Space under the floor between frame members that is usually wasted is thus brought into the car and made available for passenger use. This permits Hudson to move full-height seats down to harmonize with the new, lower top.

Hudson's new design provides other opportunities for increased roominess. Seats extend the full width of the body, for instance, because they are positioned completely ahead of the rear wheels.

And the gentlemen above are in for even more pleasant discoveries—just as you will be when you really get acquainted with this amazing motor car. For example, experience everywhere has shown that the lower to the ground a car can be built, the more stability it will have, the safer it will be; and Hudson has the *lowest center of gravity* in any American stock car—yet road clearance is ample!

As a result, this car has a hug-the-road way of going on curves, in cross-winds and on every conceivable kind of road. You sense this delightful conformity to the road the minute you begin to ride, and this stability, plus the protection of riding encircled by the sturdy box-section steel girders of Hudson's Monobilt body-and-frame*, gives you a grand feeling of safe well-being!

Still another thrilling thing about the New Hudson ride is the restful quiet with which this car glides along. The engineering in this beautiful automobile is so advanced that the usual motoring noises are reduced or controlled *practically to the vanishing point!*

Will you accept this as our invitation to look into and ride the exciting New Hudson? The nearest Hudson dealer will welcome your visit, and he will supply you with a copy of a new booklet, "The Importance of Stepping Down," which explains all of the many advantages in Hudson's new design principle. Hudson Motor Car Company, Detroit 14.

*Trade-mark and patents pending

Interior, Commodore Custom Sedan for six or more passengers—typical of the luxury and roominess in all New Hudson models.

Hudson Drive-Master Transmission—you are invited to try automatic gear shifting in forward speeds as provided by Hudson's Drive-Master Transmission—by far the easiest of all ways to drive. You can accelerate as long and as fast as you like in pick-up gear, then lift your toe momentarily, and you're in high. The shift into high comes *only* when you are ready! Button control on the instrument panel provides instant change to conventional driving if ever desired. Drive-Master Transmission is available on all New Hudsons at slight extra cost.

The only car you step down into

Hudson

Eight body styles in Super Series and Commodore Custom Series. Your choice, 121 h.p. all-new Super-Six or 128 h.p. masterful Super-Eight engine. Super-Cushion tires. Ten rich body colors. Two special colors or five two-tone combinations—white sidewall tires—at extra cost.

"Hey, buddy—no changing clothes in MY cab!"

HARRY: Who, me? I didn't do anything!

DRIVER: Don't gimme that! You step into the hack wearin' a nifty shirt, and now you're wearin' a nifty *sports* shirt! Whatcha tryin' to do? Make me lose my license?

HARRY: But, honest, Cabbie—*it's the same shirt.* It's a two-way shirt. Called the Arrow* Doubler.

DRIVER: Two-way stretches I've heard of. Two-way shirts? Nah!

HARRY: It's true. Y'see, I'm starting my vacation today, so I'm wearing the Arrow Doubler. In the office, I wear it with a tie. *It's a business shirt!* In the cab, I take off the tie. *It's a sports shirt!*

DRIVER: Look, Bub. I admit it's a handsome sports shirt. It's cool-lookin'. It's comfy-lookin'. But I don't see where it's a *dress* shirt—

HARRY: Look. LOOK. I'll *prove* it to you. I'll put *on* the tie. It's just like every Arrow Shirt, see. Swell collar, swell fit. And *Sanforized,** too—shrinkage less'n one per cent. LOOK!

DRIVER: Say! You're right! It's the same

shirt—only *different.* Arrow Doubler, huh? I'll have to—oh, oh!

COP: PULL OVER TO THE SIDE! Why don't you look where you're driving, Hackie! You been on a one-way street for ten minutes!

DRIVER: Holy *smoke!* Two-way shirts—one-way street—what a DAY! *Cluett, Peabody & Co., Inc.*

*Arrow, Sanforized: Registered Trade-marks.

ARROW SHIRTS

rage meant nothing to him, she went completely fishwife. Dr. Fowler coddled his patients needlessly, she shrilled; this woman had summoned him merely to satisfy a selfish whim, she shouted.

Henry picked up his little black bag. "You'll probably be asleep when I get back."

"I shan't sleep a wink. I never do when you're out."

"You can take a pill," he said. "Just one, no more."

Blocking the door with her body, she demanded, "What time will you be back?"

"How can I say?"

"I warn you—" she began.

"Again?" His voice sounded frozen.

"I'll bolt the door. You won't be able to get in."

Without another word, he pushed past her, gently brushed her aside and walked out. She made a noisy business of bolting the door. There was no sign that Henry had heard, and when he backed his car out of the garage, he did not look up to see whether she was at the window. After a time she laid out an elaborate two-deck game of solitaire. At two in the morning, before she went to bed, she took off the bolt.

When she woke, at nine, he had not come home. She called the hospital but was told that Dr. Fowler was with his patient and could not be disturbed. All day she waited for some word, but Henry neither returned home nor tried to reach her by telephone.

The blue silk garter which had been lent her for luck on her wedding day and which she had not yet returned to its owner had been put away in an old satin Valentine box along with some discarded costume jewelry, unstrung beads and mateless earrings. Lilith had not forgotten the little bride who had offered her "something borrowed and something blue" but she did not often think about her.

ON THE other hand, Helen Wozzeck Snyder recalled every detail of the meeting which had been one of the most significant moments of the most memorable day in her life. Twice Helen had read in the newspapers about the bridegroom whose wedding had preceded hers in the Little Church in the Vale, for Dr. Henry Fowler had been obstetrician in attendance at the birth of movie stars' babies.

Naturally, Helen believed that Mrs. Henry Fowler dwelt in a state of unceasing ecstasy. Had she heard about Lilith's problems, Helen would have gone right on believing in the bliss of the Fowlers.

Helen's problem was much simpler. She wanted a home. This was a normal desire, and in normal times easy of achievement. Now she and Bill were living, through the grace of her cousin Stan Wozzeck, in the parlor of the Wozzeck bungalow in Inglewood. Helen and Bill considered themselves lucky to be paying forty dollars a month for the parlor when so many newly married couples were sleeping in reconditioned hencoops.

The Wozzeck house, like so many dwellings in Los Angeles, single or multiple, bungalow or mansion, was made of tar paper, chicken wire and thin plaster. Through the walls Helen and Bill could hear, like a radio that is never turned off, the ceaseless lament of Stan's wife.

To have heard Mildred go on about the loss of her parlor, one would think she had descended to life in a cave after years of luxury in marble halls. She was constantly bewailing the invasion of her home and never thinking about the forty a month which she and Stan paid on their mortgage and which allowed them to live in the other four rooms rent-free. Eight years before, she and Stan had paid five hundred dollars down, and because of this had become as holy as a landlord who owns blocks of apartments.

The sad part of it was that Helen and Bill had more money in their joint bank accounts than Stan and Mildred had put into the house, and were together earning almost a hundred a week. This was solid money and certainly not the income of people who have to beg favors. But what could they get nowadays for a five- or six-hundred-dollar deposit? Not even a hencoop! And the problem of renting was even more insoluble. Day after day, when they had finished work, they drove around in Bill's old jalopy, looking at "investments" which turned out to be sand lots without even foundations or basements on them; or worse, run-down twenty-dollar apartments at seventy-five, besides a two- or three-hundred-dollar bonus to the landlord or agent.

MILDRED'S petulant voice and the wailing of her year-old child, spoiled beyond belief, woke Helen each morning at half past six.

"I could kick her teeth in," Helen would say, greeting the dawn in cheery fashion. "What's she got to kick about, I'd like to know. Forty a month for this steam roller."

"Sh-sh, they'll hear you," Bill warned.

Helen groaned and buried her face in the pillow. The kitchen was a card table set up in the corner and fitted out with a few ten-cent-store pots, a set of plastic dishes, and an electric plate upon which they boiled water for their coffee.

Sleep, once the cheapest of Helen's activities, had now become so precious that she counted the hours of slumber like a miser his gold. Overtired and restless, she lay rigid on the hard couch, afraid to turn lest she disturb Bill. And he, although loving and considerate about most things, thought Helen's complaints no more than female cussedness.

"What do you mean, you can't sleep? I just wish you could see a picture of yourself pounding that pillow. I never in my life seen a woman so crazy about sleeping in the morning."

"How many women have you seen sleeping in the morning?" she'd inquire tartly.

"Gosh, what a sour-puss your wife's getting to be," she remarked when finally she had got herself alive enough to hear her voice.

"If we could only find a place of our own to live in, I guess everything'd be all right between us," she would explain, hooking her bra with one hand and with the other slipping slices of bakery bread into the toaster.

"What's wrong between us?" Bill inquired as he put his razor back into his suitcase and hunted in the cedar chest for a tie.

"We'd have a place to keep our things, and I could give you a hot cereal in the morning."

Bill was always ready first. By the time the toast was brown and the coffee ready, he was able to sit down and eat comfortably at the card table. Helen hopped around like a one-legged sparrow, dressing and putting things away, trying to eat her breakfast and get the room tidy all at the same time. The strain was too great.

"What's getting to be the matter with me?" Helen cried, and when she saw herself in the mirror set upon the console radio which she used as a dressing table she was appalled by her appearance. Her cheeks were sunken, her eyes surrounded by violet circles, and her hair, in spite of a twelve-dollar permanent, as straight and pale as pulled taffy.

"Maybe you ought to quit work," Bill said. "It's getting too much for you, having a job and getting used to married life at the same time." Sometimes at night when he was most in love with her, he saw shadows fall across her pinched little face.

"But we want a home of our own, don't we? And with prices nowadays how'll we ever manage to get somethin' nice?"

To comfort her, Bill took her in his arms.

Helen had the breakfast things to clear up while Bill had to go through the awful ritual of closing the couch-bed. It had a mechanical contrivance, which, according to the salesman who had demonstrated it to Mildred, a child could close with the tip of a finger. Bill Snyder, ex-Marine, had to fight it out with both hands. This was always accompanied by such shouting and swearing that Helen feared God's fury and the neighbors. . . .

On the other side of the wall Mildred Wozzeck listened nervously. "If that big lummox had any brains in his head he could close it like that." She snapped her fingers.

"Mind your own business," Stan told her.

"I suppose I'm to stand here like deaf and dumb and see my good furniture ruined."

"If you didn't look, you wouldn't see so much," roared Stan.

Gathering her wrapper around her, Mildred went through the hall to the parlor door. A landlady in ermine could not have knocked more arrogantly. "I'm afraid I'll have to ask you to be a little more quiet. The baby's had a bad night."

"You're telling us?" said Helen.

Mildred strode coolly into their room, their home and, by virtue of the forty a month, their castle. She sneered openly at the manner in which Bill had restored the cushions to the couch.

"I'd thank you, Mildred, to leave us have a little privacy in the morning."

"It happens to be my house and you might as well know, it don't set too well having relatives all over the place."

"We may be relatives, but we pay our rent," Helen reminded her.

These female encounters distressed Bill. He did not like seeing his young wife coarsen and turn sour. "Come on, kid, we'll be late again. Last time you fought with her, you got docked—remember?"

AS THEY rushed out to the jalopy which they had to keep parked on the street at night, Mildred summoned her husband. "Some family you got," she screamed, as if Stan were deaf and half a mile away. "Where was your cousin brought up? In a barn?"

"Can't you quit pushing her around, just for one day maybe? Helen's just a kid."

"Me push her around? Did you hear what she said to me?" Mildred strolled to the improvised dressing table, examined a scratch in the walnut veneer and tried Helen's new pancake make-up on her swarthy skin. "I'm not going to stand it in my home much longer, I'm telling you. They got to find a place of their own and quick."

"That's what you always say," jeered Stan.

"This time I mean it." . . .

As their old jalopy made its way through the jungle of Los Angeles traffic, the young Snyders were discussing the same topic. Fighting about it, in fact. Bill had again warned Helen against being fresh to Mildred.

"What am I supposed to do, get down and kiss her feet every morning because we're paying her forty a month?" snapped Helen.

"You can try to get along with people. If it weren't for her and Stan—"

"Yes, I know, we'd be sleeping in the gutter."

Bill gave up the argument. Helen sulked, resenting his criticism.

After a while Bill said, "We got to find a place. If they ask for a bonus, so what? We only live once." This was a sign of weakening. Until now they had been firm in their resolution not to pay out good money for the bonuses demanded by racketeering real-estate agents and greedy landlords. Their savings, accumulated with great effort and laid aside by their combined will power, had been intended for investment; as down payment on a home of their own.

Every cent out of their bank accounts was like blood dripping from Helen's body. "I guess we'll have to, but then we'll have to make more and try to save more, too. With the furniture to buy and all, where'll we be if we pay out a bonus? There's nothing I hate like starting out in debt."

TO a couple like the young Davis Barneses, the housing problem was one of those unfortunate things you read about in the newspapers. Carol had been invited by her mother-in-law to a number of club meetings and forums on the subject, but she was too busy with one small house to concern herself with a problem that both houses of Congress had been unable to solve.

The seven-room bungalow had been given Carol and young Davis by his parents, and her mother, not to be surpassed in generosity, had written out a check for the furnishings. To a girl of Helen Snyder's sort, such gifts would have seemed manna from heaven. Carol accepted them with gratitude, but as less than miraculous.

After much deliberation she had decided to do her house in mixed antiques. Modernistic decoration had become vulgar, she decided, and straight early American eliché.

The elder Mrs. Barnes raised plucked eyebrows at the effort and time it was taking Carol to complete the furnishings of her house. She could never understand, Mrs. Barnes said, why a girl with plenty of money to spend should not shop respectably at the department stores.

In spite of this Carol went on undaunted, going out every day to poke about in the antique shops. For a long time she had avoided Hollywood and Beverly Hills which, she had been told by her new friends in Pasadena, were costly and inferior sucker salons for tourists and motion picture parvenus. But at last, because she was tired of the nagging and desperate for a dining table, she gave up her prejudices.

There were so many shops on the Sunset Strip that she parked her car and walked on the deserted sidewalks. The day was unbearable, the sun like a blunt instrument.

She was about to give up for the day when she saw dimly, through half-drawn Venetian blinds, the curve of a mahogany leg. The shop looked cool and inviting, and she thought she might ask for a drink of water while she looked at the table.

A blond young woman strode forward to greet her. "Good afternoon," she said in a voice that Carol classified as Eastern finishing school.

"That's a rather interesting table," remarked Carol warily.

"Our pride and joy," said the dealer.

"English?" asked Carol.

"No, American, but in the early Empire manner which is in my opinion—" The sentence, left unfinished, was accompanied by a shrug that suggested omniscience. "Look at that cabinetwork. And the grain of the wood. Many dealers would pass this off as authentic Phyfe, but we don't do that sort of thing."

"When I'm fond of a dog, I don't give a hang about the pedigree," Carol said.

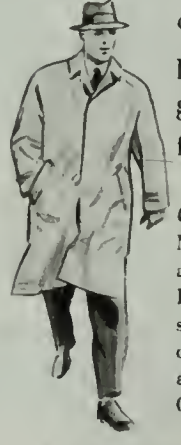
"But this has a pedigree. We got it from the family for whom it was originally made. One of the great houses of North Carolina."

"Is that included in the price?"

"I'm not sure the table's for sale."

"Really?" said Carol.

"That's not just sales talk," the dealer said. "My partner, Mrs. Clark—Fowler, I mean, she's been remarried recently, would like it for herself."



"You mean it's not for sale? Definitely?"

Makers of Smartair Leisure Wear

Scenting profit, Margery Sears showed indecision. "It's hard to tell. I'll ask her, if you'd like."

She went up a flight of stairs at the back of the shop and crossed a balcony. She found Lilith with her ear glued to the telephone. "Left the hospital!" she cried. "No! But when? What time? Try to locate him. And tell him to ring me back. At once."

Lilith slammed the instrument back on the cradle. "Do you know Henry left the hospital at two o'clock and hasn't called me yet?"

"What did I tell you about marrying a doctor?"

"Of course," said Lilith, "it was a terribly difficult case, and—"

"The next time it happens, let me know," laughed Margery. "I'll fix up a date for you."

"Thanks," snapped Lilith, "but you know I don't go out with other women's husbands."

This was Margery's cue for changing the subject. "What about the Durham table? Want to sell it? I think I've got a deal on."

"I don't know. I might want it for our house."

"Well, we sell or don't we?"

"Will she pay eight hundred?"

"You brigand," laughed Margery.

"If the customer wants it enough, she ought to pay."

IT WAS, really, a very good table although not nearly so valuable as Margery's conversation with Carol had inferred. Lilith had paid two hundred and fifty dollars for it at an auction in Durham, and they had also spent about seventy-five dollars for shipping and repairs.

Lilith started down the stairs. There was nothing she liked better than a sharp duel with a rich customer.

"You've got the real connoisseur's eyes," she said, facing Carol across the mahogany. "Very few people really know how good that table is."

Carol offered a frank smile. "You look so familiar. Haven't I met you somewhere?"

"Maybe you've been in the shop before," replied Lilith.

"No, I've never been in here."

"At the Antiques Show?" ventured Lilith.

"No, I've never been at one in California. I only came here last winter, on a visit, and I met my husband and we were married—"

As clearly as if it were a room she had planned for a customer, Lilith saw the Bride's Boudoir again, complete to the patterns of carpet and drapes. "The fifth of June," she squealed, and drew out her gold cigarette case. "Smoke?" she said, offering it.

Immediately the scene returned to Carol's mind. What she remembered was that this woman had confessed that she had that morning taken a third husband. In the circumstances she could not bring herself to ask whether the marriage was flourishing.

Lilith had no such qualms. "How you doing? Happy?"

"Blissful," said Carol, and forcing the question, inquired, "and you?"

"I wouldn't exchange him for a ton of diamonds," answered Lilith.

"It's a great coincidence, our meeting like this."

There was nothing coincidental about it. In her business Lilith was likely to meet everyone who could pay a hundred dollars for an old vegetable dish. But she was well disposed toward Carol now, and when asked the price of the table, hesitated before breaking the bad news.

"It's pretty expensive."

"I know," Carol answered, "but I've looked at hundreds of tables and I've just got to have this one."

Lilith drummed on the table. She was weakening.

"How much?" Carol repeated.

Lilith pretended to be unaware of Margery's dark glances. "Six fifty."

"Oh!" exclaimed Carol. "I thought it'd be at least eight hundred."

Margery collapsed into a Regency chair.

"There's only one thing," Carol said. "I want the table, but I'd like my husband to see it first."

"We have another customer who's interested in it," Margery said eagerly. "She might be in tonight to look at it."

"I'll ask my husband to dash right over," Carol offered.

She called the used-car lot, interrupting Davis in a transaction that also involved an antique. He was trying to persuade a customer that eight hundred dollars was not too much to pay for a rare old '36-model car.

"What do you think I am, a playboy?" he asked her brusquely. "If you like it, buy it. You know it'll be all right with me. I'm in the midst of a deal, Babe."

"When it's finished, Davis, will you come over, please?" Carol begged. "It's not much out of your way and you could stop on the way home."

"Okay," said Davis. "I'll be there about half past five. What's the address?"

He meant to leave the used-car lot

"Hmm—your former employer gave you a very nice letter of recommendation—but how about your work?"

All-New Schick turns Shaving Chore to Cheer

New in power, new in speed, new in comfort— new Stop-Start Finger Switch, new Mighty Motor, dozens of newsworthy features for whisker-weary shavers!

Electric Shaving HQ, Sept. 17 — The latest and greatest Schick Electric Shaver has made its dynamic debut — and is already making news wherever shaving men gather.

For this sleek Schick is new *through and through.* It's new in styling — new to look at, a pleasure to hold. It's new in stopping and starting — the handy finger switch snaps on and off in a flash. Even the Stay-On Whisk-Its are new — stronger, sturdier, blended into the shaver.

And brother, is it packed with *power!* ⅓ more power — power that zips Schick's V-16 Shearing Heads through thick and thin, through rough patches and soft fuzz, from cheek to cheek.

Besides, it's nylon-cushioned — has a new spring-like actuating lever — and a batch of other new features.

Add 'em together and here's the grand total — cheerful shaving instead of choreful shaving — shaving that's fast, easy, bother-free.

The experts at Schick say no one ever dreamed of a shaver this good. They ought to know — after pioneering electric shavers 18 years ago — and making Schick America's No. 1 shaver.

After shaving with this all-new Schick just once, you'll say they're understating! Your dealer awaits you with open arms and a brand-new Schick!

THERE'S A LOT THAT'S NEW IN THE COLONEL, TOO!

There's a new head on the Colonel's shoulders. It's the new 3-M Hollow-Ground SHEARING HEAD — with Fast Pickup INTERCEPTOR BAR that pops up each whisker to be cropped clean at skinline. Also — the Colonel comes in a smarter travel case. Schick Colonel with new 3-M Head $16.50

WHAT'S NEW? *PLENTY!* —INSIDE AND OUT!

NEW Shaving Ease, speed, comfort, convenience — with the V-16 shearing heads.

NEW Stop-Start Switch—no wheel to spin. Starts and stops the shaver.

NEW Power — ⅓ more power to zoom through the toughest whiskers.

NEW Mighty Motor— 37% more efficient. Hi-speed oil-impregnated bronze bearings on ingenious new motor shaft for stronger, smoother running.

NEW Nylon Cushioning — nylon rubbing blocks — plus springlike actuating lever and brazed points — all add up to longer life and trouble-free performance.

NEW Stay-On Whisk-Its — catch all beard clippings, can't come off. Strong closing and opening. Note how they blend into the shaver.

NEW Travel Case—all metal, handsomely covered, stamped in gold. Even a new, handier plastic cord ring.

NEW Stream-Flo Styling—created by Raymond Loewy. Unbelievably light and easy to hold, with non-slip ribbing.

And—It Fits the Schick Shaverest — the automatic wall-holder which keeps the shaver finger-tip handy, shuts off current automatically, zips up the cord.

New Power-Packed Schick Super—$21.0

All-new, through and through SCHICK *ELECTRIC* SHAVER

promptly and arrive at the antique shop as he had promised, at half past five. Another deal detained him, this time with a '48-model customer who was trying to make a good thing for himself on the sale of a new convertible. To convince the character that his demands were unreasonable, Davis suggested cocktails in a near-by bar. It was almost six when he started.

Margery was alone in the shop. Lilith had gone up to her apartment to bathe and change just in case Henry should turn up and insist, in spite of the sleepless night, that they go to the doctors' dinner.

Margery had been phoning around, trying to get herself a date. It was one of those dull periods when all of her best friends were out of town, or their wives at home. She was locking the front door when Davis came along.

"I'm so sorry to be late," he said, offering his most engaging smile, "but I was detained by business."

"Advertising business?" she asked.

"Guess again."

"It's selling something. Something that costs more than it's worth."

"What makes you say that?"

"I smell the sales stimulation. You don't have to ply the customer with whisky when you're selling an honest chocolate bar. What business is it, Mr. Barnes?"

"My first name's Davis. Does that mean anything to you?"

"Dependable Davis," she shrieked. "I'm without a car at present, and need a new one. What about it?"

"I'd be happy to demonstrate a few models."

"And ply me with whisky?"

"Depends upon your resistance."

Margery turned from his bold glance. "This is the piece your wife wanted."

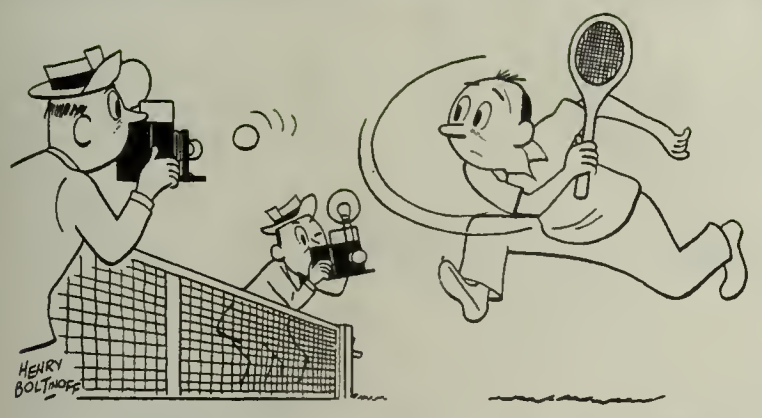
"Is it a good buy?"

Like the good saleswoman she was, Margery showed off the merchandise. Davis appreciated her efforts.

It was just good luck that he happened to be driving in her direction. In a city where public transportation is so bad that many people do not even know it exists, it is common enough to ask for a lift.

His car was open. She had to tie on a scarf. While she was gone he waited in the dusky shop. Suddenly the place was ablaze with lights. Lilith had turned them on as she came down from the apartment.

"And I thought I'd find antiques in this shop," cried Davis in delight.



"Hello, there," said Lilith breezily. She was not unaccustomed to finding strange men waiting in the shop for Margery at this hour. "I'm Lilith Fowler, Margery's partner. She oughtn't have left you in the dark."

Her entrance had been dramatic, and she could see fire kindling in the young man's eyes. The salve of masculine admiration was balm for her hurt pride. After waiting all day for Henry's call, she had become contrite and decided that her display of temper had offended him, and that she would make up for it by wearing the black dinner dress. But when she had discovered, through the operator at the doctors' exchange, that Henry had left the hospital at two o'clock her anger had sparked up again.

At six o'clock he had still not called. Just to show him that he could not treat her in that offhand manner, she had changed her mind again, and put on the strapless gown.

AT THE same moment Henry Fowler was in his car at the corner of their street, and fuming because a traffic light delayed his home-coming.

The past twenty hours had been difficult. He had delivered a healthy boy to a happy mother, and had been about to leave the hospital when an emergency case had been brought in. His colleagues often said that Henry Fowler was overconscientious, that he took the loss of a child harder than the parents. Intimacy with the beginning and the end of life always made him impatient of trifles, and when at last he had been able to leave the patient, he had been loath to go straight home to Lilith's fussing. This did not indicate a flaw in his love, but merely distaste for the frills and adorn-

HENRY BOLTINOFF

SPORTING ODDS

New Mexico's tennis champion, Dale Dillinger, won the set point of a match with Arizona's champion without hitting the ball with his racket. It wasn't a case of a double fault on the serve. The Arizona player's serve was good. But it came high into the teeth of a strong Arizona wind, and Dillinger rushed up and swung at it as the photographers tripped their shutters. The ball went back over the net, dropped low, the Arizona man missed it—and Dillinger had won the set and match.

The developed photographs showed, however, that Dillinger had missed the ball by at least two feet. It had been blown back over the net after the first high bounce.

—Jack Halliburton, Austin, Texas

DIRT and MOISTURE CAN'T GET IN!

Cutaway view of G-E headlamp showing one-piece construction

..that's why G-E All-glass *Sealed Beam* headlamps

DO NOT GROW DIM!

DANGER MONTHS AHEAD FOR DRIVERS

November, December, January bring less daylight, more accidents.

Have your lights checked

next time you leave your car for service!

FOR easier, safer night driving—get the headlamps that do not grow dim.

The G-E All-glass Sealed Beam Headlamp is all one big bulb. Dirt and moisture can't get in to tarnish reflector and dim light output. Even at the end of its life, the average G-E All-glass Headlamp still gives 99% of original light output.

And now G-E headlamps give you 12% more light for driving, 16% more for passing—thanks to General Electric lamp research!

Whatever lamps you need for your car, make sure you insist on G-E.

G-E LAMPS

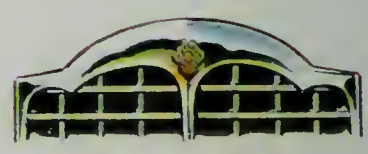
AMERICA'S MOST *POWERFUL,* MOST *LUXURIOUS* MOTOR CAR

—ONE GUESS WHAT NAME IT BEARS!

THIS page needs no signature.

Even the car itself dares to carry no nameplate. For there is no mistaking the identity of "America's most *powerful,* most *luxurious* motor car."



No other car built in America today offers you the performance of a precision-built, 160-horsepower engine.

No other car offers you such delightful smoothness, such roadability, and so broad a range of luxury appointments.

This car shares its distinctive styling and engineering with no other car of lesser name. It is the proudest achievement of America's oldest builder of fine motor cars.

At home, and in the far corners of the world—for 49 years—its famous "face" has been the symbol of the very finest expression of American craftsmanship.

One guess what name it bears!

ments which, at other times, made women, and particularly Lilith, attractive to him.

He had driven from the hospital to a cliff on the beach, parked his car and listened to the broadcast of a Mahler symphony while he added up the blessings and subtracted the shortcomings of life with Lilith. In many ways he was better suited than she to domesticity. He was steadier, in better control of himself, and newer to marriage; therefore, less apprehensive of failure. On the other side of the ledger were her charms, the warmth and sparkle, and the wealth of energy she gave to love and old furniture, cocktail parties and quarrels.

WHEN he had first met Lilith, he had seen her as a woman whose courage and independence made her unique. Now, knowing her so well, he understood that she resembled her sex in frailty. The garments of independence had been her protection against a fundamental fear of experience. With her other husbands she had played at marriage, charmingly no doubt, but without ever getting close to reality. This time, she was even more timid because failure would destroy her self-confidence.

Moved by compassion and nourished by three hamburgers, he started eagerly toward his home and the wife who needed him. Let her wear the strapless gown, he decided. Give the old doctors a treat; let their women whisper. There was scarcely a member of the local medical association who would not envy Henry Fowler his dashing wife.

As the lights turned green and he turned the corner, Henry was surprised to see the lights still burning in the antique shop. He parked at the curb, leaped out, dashed across the sidewalk—and paused. The tableau beyond the plate glass was innocent enough, and there was no reason why a good-looking young man should not lean close, in a simple courtesy, to light a woman's cigarette, nor why he should not enjoy the sight of her smooth, tanned shoulders. Nor was there reason why the woman should not laugh at his jokes or compliments.

The bare shoulders would not ordinarily have annoyed Henry. His magnanimity had been prepared. Nor would the young man's admiration have irked him excessively. But the combination sent a chill through him, and instead of rushing into the shop to greet Lilith, he turned and walked slowly toward the other entrance. . . .

Twenty minutes later, after a blithe farewell to Margery and Davis, Lilith came upstairs. Twilight falls like a rock in Los Angeles and the apartment, which had been bright when she left, was now all shadow. She moved around restlessly.

After a few minutes of waltzing without music, she picked up the telephone. "Well, have you located Dr. Fowler yet?" she asked the girl at the doctors' exchange. "Where can he possibly be?"

"Right here," said Henry.

Lilith squealed.

Henry was stretched on the sofa like an untidy corpse, his coat off, his shirt open, his shoelaces dangling.

"Call off the dogs, we've located him," she told the operator and hung up. "When did you get in?" she demanded, staring down at him.

"Fifteen or twenty minutes ago."

"Why didn't you let me know? I've been worrying myself sick."

"I didn't want to disturb your tête-à-tête."

"Are you crazy?"

"Your boy friend's good-looking."

"Why, Henry Fowler!" Her voice hit high C and cracked. "You're a jealous fiend. Just because I happen to be talking to a man in the shop! And you, gone for twenty hours without even letting me know that you were alive. And here I am, waiting—waiting—"

"But not lonely," commented Henry.

"What am I supposed to do, play solitaire for twenty hours straight? If you think I'm going to sit and twiddle my thumbs day and night, you're very much mistaken. I'm not that sort of woman—"

Her stridency echoed in the quiet room. Henry had not even bothered to defend himself. In order to show him that she could play the game with equal passivity, she walked to the great window and looked down upon the glittering cobweb spun by lights across the city.

Silence lengthened. At last Lilith said, "You've no reason to be jealous. I never saw this man before. He was waiting for Margery and I just happened to—"

A gentle snore was Henry's answer.

LILITH did not know whether to laugh or cry. In the mirror she saw herself beautifully dressed for a man whose eyes were closed. She was tempted to wake him and urge him to dress for the party, but as she returned to the couch, she saw his pallid, exhausted face. His hand drooped over the edge. She moved it to a more comfortable position, adjusted the pillows and covered his legs with the afghan.

On a chair in the hall her gold purse and her cloak lay ready. Below the window stretched the city, all color and invitation. Last night she had been alone. Her dress was beautiful and provocative. She walked quickly to the door, did not pause there nor look back but hurried out, taking care that the click of the lock and the creak of the hinges should not wake her husband.

(To be continued next week)

"I insisted she get it. She thought it was an extravagance"

"George nearly blew a fuse when I told him I'd bought it"

Bloodhounds Are My Babies

By DR. LEON F. WHITNEY as told to KYLE CRICHTON

Dr. Leon F. Whitney, noted biologist, veterinarian and student of genetics and eugenics, is a well-known authority on dogs. Bloodhounds have always fascinated him, and at his home in Orange, Connecticut, he has a large number of them which he lends to the state police when they are looking for a criminal or a missing person. His book, Bloodhounds and How to Train Them, is a standard work on the subject.

Dr. Whitney is perhaps best known to the scientific world for his studies of cancer in dogs. He is also the founder of the Leon F. Whitney collection of dogs in the Peabody Museum at Yale University.

THE bloodhound is a flop-eared, morose-looking animal that has the purely contemplative countenance of a senator and the inquisitiveness of a village spinster. He got a bad reputation back in the days of Uncle Tom and has been trying ever since to live it down. There is a feeling that bloodhounds are useless in these days of motorcars, gasoline odors and scientific crime detection.

But listen to what happened in the town of Piermont, New York, in July of this year: The citizenry was engaged in a frenzied hunt for Mrs. Margaret Guzma, who had been shopping on a Friday morning and was reported missing by her husband at 10:45 that night. Next day the Boy Scouts and fire department were combing the woods, an emergency squad was dragging a creek that ran through the Guzma property and every able-bodied man in town was engaged in a chase that combined hallooing, bushwhacking and strenuous exploration.

Late Saturday, local authorities called Chief Walter Liebert of the Clarkstown police, who has a kennel of prize-winning bloodhounds. None of his experienced trackers was available, so he brought along his fourteen-month-old puppy, Spotter of Little Brook. He took the dog into Mrs. Guzma's bedroom, held some of her clothes to his nose and turned him out the back door on a leash. With Captain Liebert gasping along behind, Spotter headed straight up a hill behind the house. He traveled at a lope, crossed the Erie Railroad tracks and came upon Mrs. Guzma sitting on a rock near a clump of trees, dazed but alive. The trail was thirty hours old and the rescue took twelve minutes!

No self-respecting bloodhound would consider this much of a feat but it had happened close to New York City, with the resultant publicity. My interest in the case arises from the fact that I have been breeding bloodhounds for thirty years and Spotter was the son of one of my best trailers, Operator of White Isle. The news stories about Spotter made a mistake, a common one in view of old legends about bloodhounds. T said he had bayed vigorously on find Mrs. Guzma but that is wrong beca the dogs I now breed are mute trail They may squeal a bit when the t gets hot but that is the extent of th excitement.

The old bloodhounds were hea gangling and loud-voiced. When we u to start out on a criminal hunt, hounds made so much racket the wh county would turn out to get in our w It was embarrassing for the handlers bad for the dogs when the curiosity se ers trampled what would otherwise fresh trails. By persistent experiment breeding and a careful selection, we veloped the mute trailer, of which th had always been a few among the blo hounds. Penitentiaries still use the o trailers—the baying, tonguing type—e cause they get on the trail early and wardens—traveling usually by cars—keep in touch with the hunt by the n of the hounds.

The test of a great bloodhound is ability to take up an old trail and down his quarry. The greatest of bloodhounds, Nick Carter, handled the late Captain V. G. Mullikin of I ington, Kentucky, provided evidence 650 convictions. To solve one case took up a trail 105 hours old and down a man who immediately confes Red Trailer, a hound I trained, twelve different trails that were ove hours old. All the captures resulte fines or convictions.

Old Sappho Trails a Killer

The New York State Police (Troop stationed at Hawthorne Barracks, White Plains, always have several of dogs, handled by Sergeant W. W. Horton. One of their finest cases volved a murder at Port Jefferson Long Island. There were no clues, there was one suspect. The police cured a sock belonging to this man started Old Sappho on the trail. She mute trailer and one of our "stre lined" hounds, weighing around pounds (in contrast to the 125 pounc the old-type dog).

What followed was baffling eve Sergeant Horton. Sappho started ning in a ditch that bordered a high There were no footprints and no that anybody had come that Sappho bounded along among the r and weeds, with Horton close be holding the leash on her harness. followed this peculiar trail for miles, turned into a driveway, smell an old automobile that had no jumped out, trailed into the house

The flop-eared sleuthhound is not as pessimistic as he looks. He'll tackle the toughest search with the slightest clues. He's streamlined now, and voiceless, and he's living down the reputation he got in the days of Uncle Tom

KYLE CRICHTON

identified the man who owned the sock. The man confessed.

Sappho's strange trailing is explained by the fact that the man had come all the way in the automobile; his feet had never touched the ground till he reached the house. The scent had evidently escaped from the car to the weeds bordering the road. Don't ask me how Old Sappho did it. I've been training bloodhounds all these years and their achievements still baffle me.

Most spectacular of all was the work of Sergeant Horton and Sappho on the prison break at Sing Sing on July 15, 1941. Charles McGale, Joseph Riordon and John Waters had made a run for it by killing John Hartye, a guard, getting the keys and fighting their way out of prison. In a running gun battle through the streets of Ossining, James Fagan, a local policeman, was killed and John Waters was shot. McGale and Riordon got away and the greatest man hunt in New York history followed. The territory around the prison was in a state of terror because McGale and Riordon had shown they were desperate killers.

On the west shore of the Hudson an empty rowboat was found. Officers brought it back to the Ossining side in the belief that it might have been the means of the men's escape, and Horton and Sappho went on the job. They recrossed the river and the scent was taken up with alacrity on the other side. This was the Palisades Interstate Park, a section known for its wild and rough beauty. Sappho was running the trail with eagerness when the wind shifted. The dog raised her head and then started up a hill toward an old stone quarry. Horton was working with Lieutenant Frank Carlson of the Ossining police. They tied up Sappho and started to throw rocks into the quarry, yelling at the top of their lungs to simulate a crowd.

"Come on out!" yelled Horton. "We've got you covered!"

McGale and Riordon came out with their hands in the air and were easy captives.

Some years ago we were called to help find a boy who had been lost on the New Haven marshes. He had disappeared while out clamming with his father and uncle. For four days they had searched for the boy, dragging the marshes and calling hopelessly to attract his attention. In their desperation they had consulted a clairvoyant, who had assured them the boy was alive and would be found behind a white garage.

We decided that the dogs might be taken along the edge of the marshes, downwind, and if they smelled the boy they could locate him. Trailing conditions were beautiful. Scent seems to cling to water and to heavy damp night air. We kept one dog with us and sent the other across a small inlet in a boat. Then, simultaneously, we gave each dog one of the boy's shoes to smell, close to the water. Before we realized what was happening our dogs were both swimming. The trail ended not over ten seconds later.

I said to the anguished father, "There is your boy."

The body was found at the mouth of the inlet, exactly where the dogs indicated it was.

Hunt for Lost Baby at Night

One night I was asked to try to find a lost baby. It was after midnight. Hundreds of searchers were scouring the countryside. I asked the police to call the searchers back and ask them to stand in a lot behind the house and watch our progress.

The dogs were started from the baby's playsuit, which she had left on the ground. They dragged us through a barberry field and we thought they were headed for the baby. But they turned, ran through the crowd of curious people and then into the baby's house. Faithful, my old faithful, ran from room to room and then came out again and trailed to the baby's playsuit. Then he went directly to a swamp where we found the baby—naked and alive.

How could the hounds smell a baby's scent a quarter of a mile away when it was mixed with all those other human odors? I don't know and nobody knows, but if these dogs couldn't unscramble odors they'd be of little use.

When I jog along holding the rein which leads from a bloodhound's harness, I am constantly filled with awe and admiration. I can't imagine how a bloodhound can walk along a dirt path over which dozens of people have been tramping and follow the trail of a person who has gone that way three days before. Bloodhounds are never fooled by the fresher human tracks but follow the scent they have been given. If they lose it by a shift in the wind, they retrace their steps until they find it and take up from there.

The bloodhound is a kind and affectionate animal that has an appealing charm as a puppy but becomes increasingly less attractive as a pet as it matures. The weight of the long ears and the loose skin about the head pulls down the lids of the eyes and gives the hound a dissolute look it doesn't deserve. But at its specialty of trailing, no other dog remotely approaches it. The bloodhound asks only one thing: If you need his services, call him within a reasonable time so that the trail is fresh. Then nothing can keep him from locating his objective. ★★★

RAINBOW ROUTE TO BERLIN

Continued from page 13

chief topic of conversation in Berlin. On July 25th a C-47 crashed a short distance from Tempelhof, and Lieutenants Charles King and Robert Stuber were killed. The Russian press screamed that the overloaded planes were presenting a grave threat to the lives of the people of Berlin. Other planes would crash, they said, and Berliners would be killed. This line of reasoning aroused the people to furious anger and resentment. They held a spontaneous memorial service for the two dead pilots.

Each day the crowds increased at Tempelhof until there were often 10,000 men, women and children on Berlinerstrasse, bordering the field. They climbed trees; they scaled the walls of ruined houses; they stood on the roofs of parked cars and trucks. They cheered as the planes roared overhead and they brought presents for the fliers.

I saw an MP stop four kids trying to slip into Tempelhof. Each carried an armful of flowers. They said they wanted to give these to the pilots. So the MP looked the other way, and the four kids scrambled inside looking for the pilots.

Women brought Meissen ware and treasured pieces of silver, and some brought lucky charms they had knitted. These people were getting their first lesson in democracy, and it meant more to them than all the lectures, radio talks and editorials they had been exposed to since the Western nations took over their Berlin sectors.

At Gatow, the airport in the British sector, the same scenes were being enacted. Here the four-engined Yorks were landing, and you noticed that practically every R.A.F. pilot wore one of the small, knitted amulets given him by Berlin school children. Out at Lake Havel, where the huge Sunderlands landed, the shores were always crowded with people who cheered when the big ships hit the water.

The Berlin newspapers kept what amounted to a box score which told the previous day's haul. You'd go to the snack bar at Tempelhof for breakfast, and your waitress would beam and say, "We broke the record yesterday. Five hundred and seventy American and British planes came to Berlin."

For the first time since the end of the war, priests and ministers found their churches filled with people who had come to give thanks for the miracle of the flour and the coal. The air lift has done more than keep the people of Berlin alive. It has given them something they hadn't had before: courage to face the horribly uncertain future.

It must be remembered that there are very few men in Berlin between the ages of twenty and forty. A great portion of the able-bodied male population was killed during the battle for the German capital. When the Soviets took over they rounded up most of the rest and sent them to Russia to rebuild the cities the German army had ruined. These never came back. So today Berlin is pretty much a city of women and children, old men and amputees. The two months during which Russia had Berlin to itself (June and July, 1945) instilled a great terror into the hearts of the surviving Berliners. The success of the air lift has, to a great extent, dissipated this terror. The people now believe that Clay meant it when he said we would never leave Berlin short of an act of war.

Hundreds of Berlin women carry capsules of cyanide with them, ready for use if the Russians again gain control of the city. One of these, who works as a cook for the family of an American military government official in Berlin, came to him one day, when the air lift had been operating more than two months. She handed him the capsule.

"I know now I'll never need to use it," she said.

Then she smiled.

THE END

"You realize, of course, that this means codfish cakes, omelettes, macaroni and salads until next Wednesday"

COLLIER'S — BARNEY TOBEY

What kind of man is your mate?

SPECTATOR SPORTSMAN? Is he always in there cheering for the other fellow—instead of for himself? He'll really cheer when you give him a smart, precise Hamilton such as the LESTER (below).

EXPERT SPORTSMAN? Is he the kind of husband who can do *anything* well—from deepsea fishing to cooking a four-course dinner? He'll admire the expert craftsmanship of a handsome Hamilton like the PIPING ROCK (below).

GOOD SPORTSMAN? Is he always ready to help out when things go wrong, yet never grabs the credit when they turn out right? Reward him for being so wonderful by giving him a trustworthy Hamilton like the ERIC (below).

ONLY IN AMERICA *can you find "Elinvar Extra." It's the amazing product of 15 years of painstaking Hamilton research, resulting in a hairspring that defies rust, magnetism and temperature changes . . . all enemies of fine watch performance. This is another example of how American research plus American craftsmanship and precision machines team up to produce that miracle of accurate timekeeping—a fine, jeweled Hamilton Watch.*

nen had been overcome in two recent ad fires. Too, he does not maybe under-tand the price it was necessary to pay to et one of the jobs. Your husband must ave been killed in the performance of his luties, not just die an ordinary death. Then he city pays them the huge sum of $25-a-nonth pension until they are 65 and eligi-le for one of their own.

CLAIRE JONES, West Philadelphia, Pa.

EAGER BEAVER SQUADRON

DEAR SIR: Ryder of the Comic Page by ames Poling (Aug. 14th) is excellent but Mr. 'oling left out something very important. During World War II a destroyer squadron as called the "Little Beaver Squadron" amed after Mr. Harman's famous Little eaver. Each ship (eight in all) had an in-igne of the Little Beaver on the sides. It as the most famous destroyer squadron in he Pacific, having been awarded the Presi-ential Unit Citation in 1945.

MARTIN FOLEY, Orangeburg, N. Y.

. . I note that Mr. Poling declares that Harman ran away to join up but at fifteen e best he could do was the National Guard . . a few months spent guarding the Kan-s City waterworks." It happens that even National Guard divisions were in ombat as compared with only seven Regu-rs; that the Guard divisions took more risoners, suffered more casualties and fa-lities than did the Regulars. A National uard division broke the Hindenburg line, d was awarded more decorations for ravery than was any other division.

MAJ. GEN. JAMES E. EDMONDS, N.G.U.S.—Inac., Milford, Ohio

ollier's has always saluted the National uard. Mr. Poling merely implied that a d of fifteen fitted best in that section of e Guard which did home duty.

M. A. IGNORAMUS

EAR EDITOR: I would appreciate an ex-anation of what seems to me to be an in-nsistency in Alan Jenkins' short, short, he Emir's Fountain Pen (July 24th). 'ould Cambridge University actually nor an apparent illiterate, such as the mir Mahmoud, with a master of arts de-ee?

JOSEPHINE LOWNDES, Long Island City, N. Y.

seems that people who find themselves ing on top of the world's richest oil lds have many elaborate honors con-rred upon them.

HOPKINS

HE EDITOR: I have been reading The Se-et Papers of Harry L. Hopkins. This story ould be titled The Shameful Record of e Warmongers—or America's War Crimi-ls Confess. This social worker (Hopkins) d Socialist party member was given im-rtant diplomatic duties involving the lives millions, with absolutely no experience diplomacy. He was a loyal New Deal g; that was his sole qualification. It is azing that our government survived the ntinuous onslaughts of these criminals.

BEN H. THAYER, Seligman, Mo.

. I feel that The Secret Papers of Harry L. pkins are a significant source of material World War II.

DR. HERBERT MILLINGTON, Chairman, Social and Political Sciences, New York, N. Y.

OLLIER'S CRUTCH TO THE LAME

EAR SIR: I cannot begin to tell you how ich we enjoyed Traveling Companion, by eanor Harris (July 17th). In fact, we won-red *why* American Express was never itten up before. Most Americans look on it as a sort of fairy godmother when veling abroad, as it certainly comes to e's aid in the weirdest cases.

I personally liked it so that I mailed away seventeen copies of the July 17th issue, mostly to Americans overseas.

M. M. MARSHALL, New York, N. Y.

NO HOPE FOR CROSBY

DEAR SIR: Ted Shane's hilarity on the Crosby-Hope golfing (Road to the 19th Hole, Aug. 14th) reminds me of the time Hope and Crosby were playing a round at Lakeside. Hope made about nine wild swings, hitting the earth all around the golf ball. There were two ants there. One said, "Get up on the ball before this guy kills you!"

Another time Hope went to a golf match and explained Crosby couldn't be there because one of his horses was dying and Crosby finally wanted to see one of his horses finish.

In talking about Crosby's golf game, Hope said that "Bing is in the 70s" and shoots a fair score for a man of that age.

Hope told about the bad day Crosby had on the green. The caddie kept looking at his watch.

Bing said, "You got someplace to go? You keep looking at your watch."

The caddie replied, "This isn't my watch, it's a compass!"

JAY SCOTT, New York, N. Y.

HOW TO ADOPT A DP

DEAR SIR: I have just finished reading your article Unwanted (July 17th), and am writing to make inquiry regarding the procedure to follow to contact the proper authority, with a view toward sponsoring a displaced family.

Further, is it possible for me as a responsible citizen, having available and suitable housing and the willingness to provide a guarantee of occupation, to obtain an immigration visa for one of these families?

W. H. WARMINGTON, Minneapolis, Minn.

Write to the DP Commission, set up under the recent law, at Washington, D. C.

BELGIAN BONER

DEAR EDITOR: Referring to the article Royalty Under Wraps (July 24th): The son of King Leopold and Princess de Rethy cannot claim the throne. Besides, his name is Alexandre and not Louis Napoleon. The author probably meant Prince Baudouin, the son of King Leopold and Queen Astrid.

The royal widower remarried six years or so after the queen's fatal accident, but his first son is the only heir of the throne.

LUCIEN DELBROUCK, Belgium

PROPHECY

DEAR SIR: In your issue of July 9th, 1938, you published a cartoon and article that was prophetic. The cartoon was Hitler and Mussolini dancing, they formed the head of Stalin. Why don't you publish it and the article again?

MRS. BESSE KRIGER, Saint Cloud, Fla.

Here's the cartoon. The article is too long for The Week's Mail.

Get the personalized comfort of Jockeys—

the only underwear "measured-to-your-build"

If every time you travel, your underwear goes traveling up your leg, hop off the train and run to a Jockey dealer. He'll fit you with Jockeys by the "Hip-Tape" method, developed and copyrighted by Coopers as an exclusive service for Jockey customers. You get perfect fit—not only at the waist—but at the hip and crotch, too. That's why Jockeys travel with you—not against you.

Also Jockey Underwear in Children's Sizes

Jockey gives you comfort so perfect it's patented!

When you have a complete Jockey Underwardrobe, you always have the right underwear for any occasion or season.

Every model has the famous patented comfort features of Jockey: the Y-Front construction, the no-gap opening, the protective cradled pouch for genuine masculine support, the smooth-seamed freedom from binding and chafing.

This all adds up to comfort you've never known before if you haven't tried Jockeys "measured-to-your-build." It's snug comfort, patented comfort. And the only sure way of getting it is to be sure you have Jockeys. And be sure to get Jockey Contoured Shirts to match, too, short sleeves or sleeveless.

Jockey Shorts for active sports; Jockey Midway for everyday wear; Jockey Bellin for dress-up wear; Jockey Long for cold days; Jockey Over-Knee protects tender skin, trouser press.

Don't ask for "knit underwear" ask for

Look for the TOASTMASTER *name on your toaster... others will!*

Folks usually take a second look at the new "Toastmaster" Toaster. They admire its flawless beauty. They respect its quarter-century background of faithful performance. They recall seeing America's finest toaster in the homes of people who enjoy the best. Yes, those who own a "Toastmaster" Toaster take pride in it. Those who don't, keep hoping. So when you buy, whether for yourself or as a gift—look for the "Toastmaster"* name on your toaster . . . others will!

JUST PRESS THE KEY
—and the Superflex toast timer automaticolly delivers perfect toast every time.

TOUCH THE BUTTON
—and watch the crumb tray swing open instontly for quick, easy cleaning.

LIFT THE TOASTER
—easily, safely, by finger-fitting handles that are always cool to your touch.

The New TOASTMASTER *Automatic Pop-Up Toaster*

*"Toastmaster" is a registered trademark of McGraw Electric Company, makers of "Toastmaster" Toasters, "Toastmaster" Electric Water Heaters, and other "Toastmaster" Products. Copyright 1948, Toastmaster Products Division, McGraw Electric Company, Elgin, Ill.

Confessions of a Railroad Cop

By LT. JAMES R. THOMPSON

The retired chief of New York's Pennsylvania Station police has a tale of cops and robbers to tell. It's a story hidden in the crowds of any big railroad depot. The game is serious and the stakes are high—your suitcase, your pocketbook, or even your life

HAVEN'T I seen you somewhere before? If your travels have ever brought you to New York's Pennsylvania Station, the chances are I saw you there. It was my job—I retired last month—to make sure you got safely in or out of the big city.

During my 38 years as private cop at the world's biggest and busiest railroad terminus, some two billion passengers—or about the number of people living on this planet—passed through the gates under the watchful eyes of the Station Police Force.

As chief, I've guarded most of the celebrities passing through, including all the Presidents since Taft. I've also kept close tab on two generations of pickpockets, con men and thugs, and dodged a bullet or a brass knuckle now and then. But most of my scares came from peaceful, law-abiding citizens like yourself.

Every weekday afternoon Penn Station teeters on the brink of riot. Between 5:00 P.M. and 7:00 P.M. a cloudburst of tired humanity twice the size of the population of Topeka, Kansas, swirls into an underground area at Penn Station no bigger than a baseball diamond, and spills through the floodgates of the Long Island Rail Road to be pumped out by train through tunnels far below the East River.

With the tunnels blocked for as little as 10 minutes and nothing to cut off the pressure of crowds pouring in through 28 station entrances, panic is never farther away than the first woman's scream.

That nightmare has never materialized simply because the New York City police and the railroad force under my command have acted promptly according to prearranged plan the five or six times such emergencies have arisen. The last time it happened was the Big Snow on December 26, 1947. The first rush-hour trains cleared the tunnel and stalled on the other side. *(Continued on page 70)*

Lt. James Thompson standing with a gateman in the Pennsylvania Station. Much of his time, over a 38-year period, was spent in similar spots guarding celebrities and looking for elusive crooks

THROW AWAY YOUR BLOTTER...

Write dry

WITH WET INK!

You need 2 things:

1.
New super-permanent Superchrome

2.
Parker "51"
world's most wanted pen

JOIN THE MILLIONS who now enjoy the magical ease of *dry writing!* Win freedom from blotters forever.

Just fill the Parker "51" with new Superchrome . . . created, through 17 years' research, for this pen alone.

Then watch. In the flick of an eye, each sharp stroke is dry as desert sand. No smudge, no blur. This ink dries by *penetration* . . . not evaporation.

Superchrome's 5 colors are up to 60% more brilliant than ordinary inks. 11 times more resistant to fading, on the average, than Government standards require.

Test this dry-writing combination at your Parker dealer's today. The Parker Pen Company, Janesville, Wisconsin, U. S. A.; Toronto, Canada.

David Dietz Says—

Noted science editor and lecturer. Author of "Atomic Energy in the Coming Era."

"Superchrome is an outstanding achievement in scientific research. A wholly new kind of writing fluid—it's a delight to the eye and a delight to use."

COPR 1948 BY THE PARKER PEN COMPANY

OIL BELOW THE RIO GRANDE

Continued from page 26

When delegate Antonio Carillo Flores countered Marshall's proposal with the statement that "if foreigners don't wish to make investments in Mexico in conformity with our legal requirements, no one obliges them to invest," he was playing politics. He was talking back at Uncle Sam to satisfy nationalistic industrialists like José Domingo Lavin; to please Cárdenas, living godhead of the Mexican Revolution, irreverently known behind his bulky back as El Trompudo for his trumpet-shaped mouth; and to gain the support of labor leaders like Vicente Lombardo Toledano.

Tariff Protects Inferior Goods

The first group, the nationalistic war-made industrialists, are a new but powerful source of opposition to *"el imperialismo yanqui."* They blocked all efforts to negotiate a new Mexican-American trade treaty by demanding high tariffs on all U.S. products which also were made in Mexico. One of the leaders of the industrial cabal made steel furniture, inferior in quality to the American product and a lot more expensive. He wanted protection, and was willing to wreck the trade treaty to save his own industry. Others of his ilk looked for tariff protection of uneconomic chemical plants, paper mills and engine factories.

The second opposing force Alemán has to contend with is the vast, unseen power of Cárdenas. After Alemán, Cárdenas is undoubtedly the most powerful man in Mexico. He is a big restless Indian, who wanders from town to town within a radius of several hundred miles of his home in Jiquilpan, in the state of Michoacán. At fifty-three he looks forty and is as tough as burrohide.

Cárdenas' power derives from his unique place in Mexican revolutionary history. In 1914, when only 19, he joined Pancho Villa and Emiliano Zapata, echoing their cry of *tierra y libertad*, land and liberty. He was a general by 1924, and an honest one. While commanding troops policing Tampico, he refused $5,000, the customary *mordida*, or bite, of the local oil profits offered the protector of the petroleum plants.

"The oil," he told his would-be corrupter, "belongs to the people." This was to become, in 1938, the theme of his Expropriation Law.

Cárdenas had a Socialist plan for government ownership and control of natural resources, the breakup of large estates into communal farms known as *ejidos* and the organization of a strong labor movement. And when Cárdenas succeeded General Abelardo Rodriguez in 1934 he put his plan into operation.

Non-Communist himself, but decidedly left-wing, Cárdenas permitted every conceivable kind of political activity. He reorganized the old national revolutionary party into the PRM—Partido de la Revolución Mexicana. This was the party later headed by Avila Camacho and subsequently by Miguel Alemán, who changed its name to PRI, or Partido de la Revolución Institucional. The PRI is almost as much Cárdenas' party as it is the party of its titular chief, Alemán. To some 11,000,000 Indians—to whom Spanish is almost a foreign tongue to be learned only as a means of communication with the rest of Mexico's 12,000,000 mestizos and Europeans—Cárdenas is almost what Mahatma Ghandi was to India.

Alemán may change the law permitting American firms to help Mexico help itself to the wealth lying locked in its limestone and sand. But only when he is sure that Cárdenas will not lead or support another revolution.

The third powerful anti-American force is the labor leader, Vicente Lombardo Toledano. A sworn enemy of Yankee imperialism, he seems to have no allergy to the Russian variety. As head of the CTAL, the Confederación de Trabajadores de America Latina, he walked the Kremlin's anti-American chalk line in Latin-American affairs.

Toledano has been busy organizing a Popular party, with his small Workers' and Peasants' Union as a nucleus. Until Alemán can assess the strength of the move, he must play his cards carefully. A showdown is coming, and Alemán has a trump card—industrialization.

For decades Mexican politicians and labor leaders, Toledano loudest of all, have pleaded for industrialization as the cure for their country's abysmal poverty. Mexico, they said, could not go on being an exporter of cheap raw materials, an importer of expensive manufactured goods, and a heavy borrower of the dollars to make up the difference.

Industrialization is one of the planks in Toledano's Popular party platform. Will Alemán be able to convince him that development of Mexico's oil resources would achieve the ends Toledano desires—more Diesel-drawn trains and trucks for the country's feeble transportation system, more oil-fired power plants to supplement its few hydro-electric ones, more factories and jobs?

Toledano is not the big shot he once was. Within a month after taking office Alemán broke an illegal strike by the petroleum workers' union against Petróleos Mexicanos, the government's oil monopoly. Confederación de Trabajadores Mexicanos, a Mexican equivalent of the C.I.O., founded and headed by Toledano, refused to join the petroleum workers in a general strike.

In the split which followed, Toledano's personal power was reduced to leadership of the Alianza de Obreros y Campesinos de Mexico, a union of some 5,000 to 10,000 left-wing workers and peasants. He allegedly has loyal followers among the country's 60,000 railroad workers, 80,000 mining and metallurgical workers and the 25,000 petroleum workers. But the Mexican worker is sick of labor bosses.

No Benefit from High Wages

The Mexican worker is North America's hungriest man. Wages have gone up 128 per cent since 1939. But the cost of living has gone up 213 per cent. He has a far tougher time buying enough corn meal and beans, his main items of diet, than he did 10 years ago. The benefits which were to have resulted from nationalization of petroleum and the railroads, and the creation of communal farms from the lands of the big estates have not materialized.

The idea behind expropriation of the oil companies was to keep the profits inside the country to build factories, schools and hospitals, and to make other much-needed improvements. But all the profits went into the pockets of some revolutionary generals who built mansions costing up to $150,000 on salaries of less than $2,500 a year, or into the hands of crooked politicians and of corrupt union leaders.

It has been a dismal decade. Pemex, the petroleum monopoly, employed 13,000 workers in 1937, one year before expropriation. The total pay roll was $11,500,000. Today, with production down to nearly a quarter of what it was, the company employs 24,500. The pay roll has swollen to $43,000,000.

The record of the railroads under nationalization is similar. With only 8,000 miles of track the Mexican government employs 55,000 workers and is annually

obliged to meet (out of taxes) a deficit of approximately $24,000,000.

Usurers and racketeers of all kinds have moved in on the communal farmers. Once constantly in hock to their landowners, they are now no less oppressed by moneylenders who charge them as much as one per cent a day for loans. They pledge their crops as security and by harvest time often find themselves without crops and dead broke. They borrow $100 and pay back $220.

Mexico is in the grip of inflation. Alemán's government has tried to control it by imposing an embargo on American automobiles, radios, cigarettes, lingerie and clothing—in all, some 125 items. This is in order to preserve the country's relatively small ($260,000,000) supply of United States currency. The embargo, put into effect in July, 1947, has been violated by as corrupt and well-organized a clique of *grandes ladrones* (big robbers) in and out of government as Mexico "has ever had in its long history of corruption," to quote a highly placed and honest Mexican official.

Mexico City's streets are filled with 1948 and even 1949 model American cars, the shop windows glitter with the forbidden radios and refrigerators, and the fine ladies of the capital's society are decked out in smart models from Fifth Avenue. The "fee" for getting a black-market car is $400, a refrigerator $100, and a radio from $50 to $100.

Graft in a Sale of Prefabs

An American manufacturer of prefabricated houses sold 3,200 units to a Mexican firm. Before the deal was closed the American company's representative in Mexico City told me he was obliged to cut in a Mexican "intermediary" to the tune of $200 per unit.

Because a pledge to clean out corruption was one of his most appealing campaign promises, Alemán is on the spot. The names of the guilty ones are on everyone's lips.

"Only a thorough house cleaning," one honest Mexican official admitted, "can save the regime."

Alemán has remained personally popular. The animosity is directed principally at the *grandes ladrones*, only a few of whom hold government posts.

Alemán is aware that corruption is his —and America's—most immediately dangerous enemy in Mexico. On whether or not the youthful President (he is only 46) cures or at least arrests it, depends the safety of his administration and, ultimately, the security of the Western Hemisphere.

According to some observers, Alemán's most effective ally, if and when he moves to throw out the money grabbers, might turn out to be Toledano. Toledano told me in an interview that he is "neither a Marxist nor a Communist" but a democrat.

"The Popular party will insist the country be rid of corruption," he said. "It will name names and cite instances. It will be risky, but we are willing to risk our skins for our democratic objectives."

Perhaps Toledano—a handsome, voluble, dynamic man who has been a scholar, professor and social worker all his life—sees that the time has come to place the vital interests of Mexico above the exigencies of the Kremlin's objectives.

And certainly there is nothing of more vital interest to Mexico today than oil. Mexican oil production has decreased from the 200,000,000 barrel a year pre-expropriation high, to a bare 56,000,000 barrels in 1947, a total achieved only by forcing existing wells to their limits. Mexico's richest wells, those in the Poza Rica area, are beginning to yield salt water instead of oil. According to oilmen who ought to know, the Mexican petroleum industry faces disaster.

Mexico has only four oil fields. In addition to the Poza Rica wells, there are the North Fields just west of Tampico, the South Fields below them and above Túxpam, and the Isthmian wells below Poza Rica. All are in the last stages of depletion. Under government management the Mexican oil industry made feeble efforts to find new fields. In the twenties, American companies drilled 800 exploratory wells a year. In 1947 Pemex drilled 20, while in Texas in the same year 9,000 wells were drilled.

Mexico's inability to finance adequate exploration of her undeveloped oil areas may prove disastrous, experts say, in the very near future. If its present wells go to salt, as is indicated by the diminishing output in recent months, Mexico will be obliged to cut its railroad schedules in half, close hundreds of factories now dependent on oil for power, and store its automobiles and trucks. The shortage is already making itself felt.

Mexico still exports oil, a fact about which Senator Antonio Bermudez, the able director of Pemex, likes to brag. But it doesn't export much. Mexico produced, by straining the wells' capacity somewhat, 56,000,000 barrels in 1947, but it consumed 49,000,000. By 1950, oilmen estimate, Mexico will become a heavy importer of oil and thus put what may be the breaking strain on its already enfeebled economy.

Mexico is obliged to import $35,000,000 worth of food yearly from the U.S. This accounts for a large slice of its unfavorable trade balance of approximately $200,000,000 a year. If Mexico must add a multimillion-dollar oil bill to its already enormous food account, it could crack up economically as badly, some of our economists say, as China.

Making the Good Neighbor Policy a two-way street would be a small price for Mexico to pay, in the face of such an alternative.

THE END

"You're right, lady—the speed limit in New York is 50 m.p.h. Too bad you happen to be in New Jersey!"

COLLIER'S — DON TOBIN

Earl A. Peterson

Cars are Mr. Petersan's business. He's serviced, overhauled, and rebuilt them for 23 years at his shap—65 Green St., Jamaica Plain P. O., Bostan, Mass.

"Me?...
I use Macmillan Oil
in my own car...
Have been for over 10 years.
There's nothing like Macmillan Ring-Free Oil
for keeping motors clean and running smooth.
I'll say it pays to use Macmillan *regularly*."

You're right, Mr. Peterson! There's no oil in America like Macmillan Ring-Free. The patented, exclusive Macmillan refining process guarantees fast lubrication, carbon removal, and cleaner motors.

Thousands of service station and garage men—experts—throughout the nation use Macmillan Ring-Free Oil in their own cars. They know what a difference it makes. Take their tip—use Macmillan *regularly*.

Patricia Wolcott's smile wins leading role in Little Theater play!

Patricia Wolcott, Young Matron, made Little Theater history in Scarsdale, N. Y. recently when she was awarded the leading role in the Fort Hill Players' production, "Years Ago."

A newcomer to the amateur stage, Patricia stole the show during tryouts for the part of the beautiful heroine...scored an instant hit on opening night. But her favorite role is wife and mother. And her smile, so dazzling behind the footlights, sparkles in this real-life role, too. It's a Pepsodent Smile! "I've always depended on Pepsodent Tooth Paste to keep my teeth bright," Patricia says. "Besides, I love its taste!"

The smile that wins is the Pepsodent Smile!

ANOTHER FINE LEVER BROTHERS PRODUCT

Patricia Wolcott knows it, people all over America agree—the smile that wins is the Pepsodent Smile! Pepsodent with Irium is their 3-to-1 favorite for brighter smiles.

Wins 3 to 1 over any other tooth paste—families from coast to coast recently compared delicious New Pepsodent with the tooth paste they were using at home. By an average of 3 to 1, they said New Pepsodent tastes better, makes breath cleaner and teeth brighter than any other tooth paste they tried. *For the safety of your smile use Pepsodent twice a day—see your dentist twice a year!*

INSIDE SPORTS

Continued from page 22

Richie hit safely in 23 consecutive games (breaking the National League rookie mark of 22 set by Johnny Mize in 1936) an outfield contemporary remarked: "Ashburn has a .400 average, but he doesn't bat .400. He runs .300 and bats .100. If I could beat out as many bunts and rollers as he does, I'd bat .600."

Richie is strictly an old-fashioned ball-player. He chokes the bat and pokes and slices for singles instead of swinging for the fences. On the bases, he slides head first instead of feet first. "Feet first," he explains, "the infielder just puts his glove on the bag and lets you slide into the ball. Head first, he has to tag my hand and that's hard to do because I can hook from either side. Course, I don't go head first into home plate. Used to be a catcher myself and I know how hard those shin guards are."

Ashburn grew up in Tilden, Nebraska, and was the state's outstanding American Legion player in 1944. The Phils sent him to Utica, New York, in 1945. Manager Eddie Sawyer watched him beat out a bunt, then confiscated his catcher's mitt. Sawyer pointed to center field and said, "Scat!"

The Army drafted Ashburn for Alaska duty in '46, but Richie returned to Utica last year, batted .362 and led the league in stolen bases. Sawyer—the fellow who made Richie a center fielder—was rewarded for such managerial sagacity last July. The Phils signed Eddie as Chapman's replacement.

Sawyer was a stranger to the majors, but he knew everything about Ashburn. Eddie was talking to Bill Meyer, the Pittsburgh manager, the morning after Ashburn bunted the Pirates out of a tight game.

"There's one consolation," Meyer remarked. "He isn't twins."

"That's what you think," Sawyer replied. "He is, but her name is Dona."

▸ RACE-TRACK MELODY

It was not a good violin and the man in the wrinkled suit played it very badly. Yet every morning at 11 o'clock when the man in the wrinkled suit fiddled in the courtyard of the large New York apartment building, windows opened and dollar bills fluttered to the pavement. The music-loving tenants wrapped their offerings in white paper and the man in the wrinkled suit had no trouble following the currency in its erratic descent.

Now there lived in the building an excellent violinist who collected only union scale and was envious of the daily good fortune enjoyed by the man in the wrinkled suit. At 10 o'clock one morning, the union-scale violinist stepped into the courtyard and played Carmen Fantasy. It was strictly Isaac Stern, but the windows remained shut. Financially, the performance was a flop.

Promptly at 11 o'clock, the man in the wrinkled suit appeared. He scraped half a dozen notes. Windows banged open. The downpour of dollar bills commenced. Piqued and curious, the union-scale violinist retrieved one of the offerings—a piece of notebook paper twisted around six dollar bills. There was a signature and the notation: "Bright Jewel across."

▸ COMFORT ON THE FAIRWAY

Ellery Rausch and Clarence Gerberich were supposed to quit playing golf three years ago—doctors' orders. Instead, they bought a secondhand automobile seat, welded it onto the front of a motor scooter, and they've been playing ever since—on their golf scooter built for two.

Ellery and Clarence loll comfortably up front, holding their clubs while a rear-drive caddie steers them down th fairway. "What you spend on gas, yo save on shoes," Clarence points out.

The Rausch-Gerberich model stimu lated golf-scooter production at Aurora Illinois, country club. Eleven othe members now own scooters. There i even a superscooter which accommo dates a foursome and a refrigerato

Recently, the super scooter tarried at trap near the 16th green. Pedestrians o the 17th tee heard somebody say: "Hol my beer for me, will you, Harry?" Ther was a pause . . . the pitch onto the gree . . . another pause . . . "Thanks, Harry.

Jack Murray, an air-line pilot, made major contribution to the advancemen of scooter golf when he attached a te strainer to a sawed-off mop handl Murray uses the handmade scooper upper on the practice fairway. Afte smacking 50 balls, he hops on his scoote and retrieves on the run.

What with 11 scooters operative an numerous others in production, Auror is scarcely the quiet, restful little cours Dutch Harrison envisions as the perfe retreat for a tournament-weary pr Dutch, an easygoing pro, likes thos little towns down in Arkansas. Dutc

"What a wonderful age this is. We could fly from New York to Chicago in the time we've been waiting for our bus!"

COLLIER'S — GLENN R. BERNHARDT

talked Jimmy Demaret into a week hibernation a while back, but t Arkansas solitude bothered Jimm Finally, on Saturday night, he sai "Isn't there someplace we can go for little excitement, Dutch?"

"Why, sure," Harrison replied. "W can go down to the barbership a watch a few haircuts."

▸ WHO'S QUITTING?

Despite Governor Dewey's popular in the Presidential polls, Mr. Truman somewhat encouraged by a report fr his former campaign manager, Bob Ha negan. At the All Star Game in St. Lou Hannegan (who resigned from Truma Cabinet to become owner of the Car nals) overheard two American Leag fans talking.

"Well," the first fan said, "we've w 10 outta 14 from the National Leag but we're mighty weak this time. W Williams and Newhouser hurt, thi don't look so good."

"Yeah," the second fan agreed. "Th National Leaguers are in a spot like Republicans. If they don't win this ye they might as well quit."

The American League won, 5 to 2.

THE END

See the Underground Fairyland

Carlsbad Caverns *via* Santa Fe

Santa Fe is the only railroad to Carlsbad for Carlsbad Caverns National Park.

Daily Pullman service direct to Carlsbad, New Mexico, from Chicago and Los Angeles

Carlsbad Caverns, in the Guadalupe Mountains of southeastern New Mexico, rank with the Grand Canyon as one of the two or three great natural wonders of the world

But like trying to describe the Grand Canyon, it is impossible to picture in words the silent grandeur of Carlsbad Caverns—where sunlight has never reached since the dawn of time.

Formations frozen in stone

Fantastic formations frozen in stone, such as Rock of Ages, Chinese Temple, and Lady at the Organ, meet the eye at every turn.

The ceiling has disappeared under millions of stalactite pendants. Grotesque stalagmites, weighing many tons each, rise from the floor. And the tremendous size of this underground fairyland (temperature, 56° the year 'round) is almost unbelievable.

For instance, the "Big Room" alone is 4,500 feet long, 625 feet wide, 300 feet from floor to ceiling. No photograph yet taken reveals more than an infinitesimal part of its glories.

The way to see it

Plan to visit Carlsbad Caverns via Santa Fe this fall or winter, so you can enjoy an unhurried exploration of *all* parts of the floodlighted Caverns open to the public. U. S. National Park Rangers will be your guides.

Santa Fe provides daily Pullman service from both Chicago and Los Angeles direct to Carlsbad, New Mexico, where motor coaches meet the train for the 27-mile ride to and from the entrance to the Caverns.

Let us send you an illustrated brochure that gives full details on how conveniently you can include this world-famous underground fairyland in your trip to or from California via Santa Fe. Just mail the coupon.

R. T. Anderson, General Passenger Traffic Manager
Dept. CL-3, 80 East Jackson Boulevard
Chicago 4, Illinois

Please send me your illustrated brochure, "Carlsbad Caverns," and tell me how easily I can visit this wonderland on my next trip to or from California.

When Ice went on Wheels Better Food went on Tables

In 1878, a new kind of train sped out of St. Louis. Its cars were loaded with barrels of Budweiser kept cold and fresh by ice-filled compartments. Thus, the brewing industry had its first refrigerator cars—and Budweiser had begun its journey toward 'round-the-world fame. Later, in the 80's, the refrigerator car made it possible for all parts of America to have fresh meat, fruits, vegetables and other good things of life.

Today, the delicious foods from far and near that make your table inviting need one thing to highlight their flavors. Golden, bubbling Budweiser brings out the fine flavor of food without losing its own distinctive taste. Every sip tells you why it is something more than beer—a tradition in hospitality.

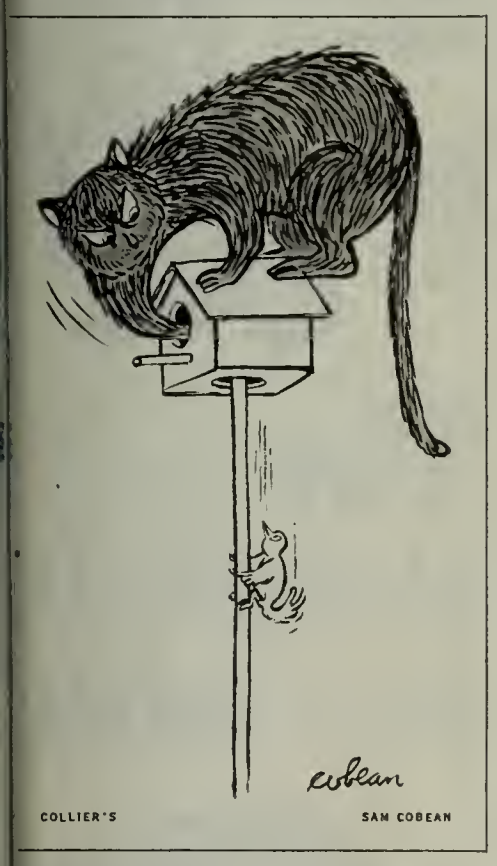
SILENT WITNESS



Continued from page 27

I almost had to grin at the situation. Al had practiced doing the hoarse whisper so that no one on earth could have told the difference. There wasn't much of a trick to it. And Helen was getting the number, so she'd swear it was I who answered the phone when she called me back.

I heard him say, "Okay, Dave. What did you want me to do?"

And Al would be croaking, "Look, I can't find my keys—the ones with the identification tag. I've looked all over. It's the bunch with my office key and the one for the vault and a duplicate ignition for the car. I may have left them in my office. Run in and take a look, will you? I'll hang on. Maybe the top drawer on the left . . ."

I was standing just behind the door as he entered. He heard the sound as I pushed it closed, and swung around toward me. That look on his face when he saw me, I'll never forget. It was almost comic, until it froze into something else. I'll never forget that either, along with a lot of other things that happened in the next few seconds. I had my hands on his windpipe, my knee in his stomach as he lay on the floor, his eyes bulging

ut and a bloody froth oozing out of the orners of his mouth. . . .

We stayed like that until the last convulsive tremor was out of him and my ngers were pressing into soft, inert, unesisting flesh. There hadn't been a sound nd he hadn't been out of his office long nough to make Helen wonder. I got up, ook the keys out of my pocket and put iem in the desk drawer.

I was down the back stairs and into the ar in a few seconds, driving out toward rentwood Heights. I didn't use the main oulevard, so it was a lot longer going irough the off streets. But there was no pecial hurry now. If a call came, Al ould continue to use the voice, and I new I had plenty of time to get home efore the police would be giving me a ttle visit to find out what I knew and hether I heard anything funny over the lephone when I was supposed to be lking to him from five miles away.

I left the car out in front and let myself to the house. Al rose nervously as I ime in but I told him to keep his shirt n. He certainly had nothing to be nervus about. Neither of us had. I asked m if there'd been any calls since that ne, and he said no. He had called back after he'd hung on for a long while, just as I had told him to, but he kept getting a busy, which meant that the phone was still off the hook or that Helen was already in contact with the police. Everything was so perfectly logical, I almost believed it myself.

"All right," I said. "Beat it. They can be here any minute now. And don't telephone. I'll call you."

He got up, shuffling a little. "How—how did everything come off?"

"Fine, thanks," I said. "Make it fast."

I watched him through the window as he started his car and drove off. Then I went into the bedroom, got out of my clothes and into pajamas and bathrobe and crawled into bed with a book.

IT WAS a long wait. I figured they'd be around in about twenty minutes, but it must have been a good two hours. They got the full story from Helen, about the calls and the keys and everything—God bless her for listening in! She had waited about five minutes at the phone, then gone into Larry's office and through to mine. She didn't scream or faint or anything. Just called the police.

I could see them through the window as they came up the walk, three of them. One, a tall, gaunt fellow, paused a moment to put his hand on the hood of my car which was parked in the driveway. I had to smile. If I had used it, the radiator might still have been warm. That was another reason I'd taken Al's car. I got up and opened the door in answer to their ring.

"I'm Inspector Manning," the tall one said. "Sorry to bother you, Mr. Jarvis, when you're sick."

"Come in," I said. "Is anything wrong?"

I brought them into the bedroom, apologizing for its appearance and for my condition as I lay back on the bed and drew the robe over me.

"This is more or less routine," Manning said as he took in the room, "but there was a bit of an accident at your office this afternoon and we thought you might be able to help us a little."

"What kind of an accident?" I asked.

"That's a pretty bad throat you've got there," Manning said.

"It'll be all right," I said. "Maybe another few days—"

"That's what Dr. Winters told us."

I looked at him sharply. "Dr. Winters? I don't understand. Why did you—?"

"Another routine check," he said. "All in relation to the—accident."

"I wish you'd let me know what you're getting at," I said gravely.

"Blakelock was throttled by a homicidal maniac."

"Larry? Murdered?"

He nodded. "In your office. There was something about keys—"

"My God!" I said. "I told him to look—and then I waited and waited—"

"Tell it from the beginning," Manning said. "Your office girl might have missed something and we'd like to get started."

I sat down and gave myself a few seconds as if to get it all together. It was only natural with a shock like that. Then I gave him the whole story in sequence.

For a minute, I almost wished it didn't make such complete, impregnable sense. There wasn't a hole in it big enough for an electron. By the time I'd finished, my voice was really little more than a faint whisper.

Manning was looking at me. "By the way, Mr. Jarvis, I should have introduced you before." He indicated the other two men. "Sergeant Burke—and this is Dr. Braddock."

"Dr. Braddock?" I said slowly.

"Take a look at this throat, Doc,"

Straight from a laundry research laboratory comes this fact: *The hotter the water, the whiter the wash.*

And now you can *get* hotter water! Get it *faster, cleaner, cheaper,* too. Because *now you can get a Ruud,* the Gas water heater with the Monel* tank and the new Ruud Temperature Dial.

Designed to keep pace with today's automatic washers, Ruud water heaters bring you all the hot water you want, hot as you want it. Ask your Gas Company, Plumber or Dealer to show you Ruud-Monel. 99.1% of owners say they'd recommend it to friends. Write for free literature and special report on laundering temperatures.

1. Get HOTTER Water! With Ruud's new Temperature Dial, you just *dial* the temperature you need—down when you want it down—up when you want it up . . . all the way up to 180 degrees for whiter white washes on wash day!

2. Get it FASTER! Ruud heats with Gas—any type, including LP-gas. That means quick heating, no waiting!

3. Get it CLEANER! Ruud's tank is *solid Monel.* It can't rust, even at the highest temperatures . . . always sends you hot water that's *sparkling-clean!*

4. Get it CHEAPER! Ruud's thrift-design saves you money. So does Gas, the economy fuel. So does your long-lasting Monel tank. Pocket your savings year after year!

ALL THE HOT WATER YOU CAN USE! Ample supplies for *every* household use, all around the clock, every day in the year. And you'll have it—*when you want it*—*with* RUUD-MONEL!

NOW YOU CAN Get a RUUD GAS Water Heater with a Rustproof MONEL Tank

Manning said. "Maybe there's something you can do."

So they weren't even trusting Winters! That was all right with me. Even better this way. But the thing I couldn't understand was why they were digging so deep. I knew they were coming out to ask questions. After all, I was the last one who spoke to him alive—or that's what they thought. Or didn't they? The way they were going at it looked like they were trying to crack an alibi, to find one thing, one little discrepancy. Why were they pushing *me?* Why were they on *my* tail?

THE doctor set the lamp to reflect the light into my throat from the circular mirror he had slipped over one eye. I gave him a nice big ahhh as he held my tongue down with a depressor. He looked a long time. Then, "It's a beauty, all right—membranes swollen and badly inflamed."

"I'm doing everything I can," I whispered. "It's lasting a long time."

"Yes, it is, isn't it?" Manning said. Then he got up suddenly. "By the way, could I use your bathroom a minute?"

"Second door on your left," I said, indicating the hall.

I knew he was going in there to look things over. For some reason, in spite of all the evidence, he still wasn't buying the laryngitis theme. Maybe because that's what cemented it all together so nicely. But again, I was safe. He'd find the empty bottles of gargle lined up on the glass shelf over the basin—even the big one they delivered this morning—I sat up sharply. That had gone down the drain, too! I had done it automatically. Maybe that was a mistake! The date—today's date—would be on the label. That was a lot of gargle to be used up in a few hours! But the chances were that he wouldn't notice.

I watched his face when he came back. I couldn't detect a thing. It seemed more blank than thoughtful.

"We won't keep you much longer," he said. "Just a couple more questions. Did you hear anything odd or suspicious when you talked to him on the phone the second time?"

"Not a thing," I said.

"Do you know anyone who might have had a reason for doing it?"

"No," I answered. "He was well liked by almost everybody. Oh, he'd have an argument with a customer occasionally."

"Business arguments?"

"Mostly," I said.

"Just what kind of a business are you in, Mr. Jarvis?" He threw it away as if it meant absolutely nothing and I didn't like that.

"We've got the Coast agency for a big house handling vitamin products."

There was a pause, a couple of beats too long. Then he said, "Just vitamins?"

"Just vitamins," I answered.

Manning said, "I see." He fumbled in his pocket for a cigarette. "Smoke bother you?" he asked.

No, the smoke didn't bother me, but something else did. Someone had talked. Larry. I was pretty sure of it. Probably while I was away sick. I didn't get to him in time. He must have given them the whole set-up, probably in an anonymous letter, and alibi or no alibi, they were following the green line. But I was in the clear on that part of it. Motive isn't enough when a guy's five miles away. And after all, maybe those beats were only in my mind. Maybe it was just an innocent question. . . .

"How did you two get on?" Manning was asking. "Any—unpleasantness?"

He knew about that anyway from Helen so I keyed it right. "We had battles I guess—but nothing serious."

"I see," Manning said again. He took a long draw on his cigarette. "That leaves us pretty much in the dark—for a few days."

I looked at him curiously. "For a few days?" I repeated.

He nodded. "Time is always of the utmost importance. Most criminals are apprehended within the first twenty-four hours. If you don't get them by then, they've got the statistics on their side." He shrugged. "In a few days—when we'll know definitely—"

"I don't think I understand," I said.

He smiled a little. "In every crime of this kind, there are two witnesses—the fellow who did it and the fellow who got it. The first one won't talk and the second one can't."

"I still don't see . . ." I started.

"That's what usually makes it so tough," he went on. "But in this case, you got kind of a break. Only thing is, we've got to wait until he's conscious. Might take another day or two." He turned to Sergeant Burke. "Call St. Luke's," he said.

Burke went to the phone on the night table and gave a number to the operator. The sweat lay across my stomach like a wet sheet and I could feel the drops starting to gather on my forehead and trickle down in front of my ears. But Manning wasn't looking at me.

"You said—you said he was dead." My voice was almost inaudible, but he heard it.

"No," he said, rubbing his chin. "He was attacked and throttled. Awfully close, I grant you, but we got a Pulmotor fast from the fire department and then rushed him to the hospital."

Yes, it could have been fast, all right. The firehouse was right next door.

The man at the phone was talking: "St. Luke's? Room 702, please. I want to talk to Sergeant Denby."

"Sorry I misled you," Manning was saying. He smiled apologetically. "We do it that way sometimes to watch the reactions."

The man at the phone said, "Hello, Denby? This is Burke. How is it?" There was a little pause. Then, "Good . . . I'll tell Manning. He's with me now. . . . Well, sure, but he'll be able to write, won't he?" He hung up and turned to Manning. "Still unconscious—maybe for another day or so—but out of danger."

"Fine," Manning said.

"He won't be able to talk for a while," Burke went on. "The vocal cords are badly lacerated. But the moment he snaps out of it, they'll give him a pencil and paper."

Manning turned to me. "Funny, isn't it? Both of you having voice trouble at the same time." Then he got up, crushed the cigarette into an ash tray and stood facing me.

"Well, do you want to wait until he writes it or will you talk now? Might help you a lot in a case like this. And we've got a whiz at dictation in the Central Office."

He helped me into my clothes.

I LOOKED at the typewritten sheets the police secretary handed me and turned through them rapidly.

"Seems to be all there," I said. "What do I do now? Just sign it?"

"Sign it is all," Manning said.

I took up the pen and signed *David Jarvis* along the bottom of the last sheet.

Inspector Manning picked up the papers and read the first few lines aloud: "I thought I'd better make the call from the office of the telephone company. I had called exactly at three and there were a lot of booths there. . . ."

He folded the sheets carefully and put them in his inside pocket. Then, he looked down at me. "It was very neat, all right. Very neat."

I looked up at him. "It would have been the perfect crime if I'd only killed him."

Inspector Manning paused for the fraction of an instant.

"It was the perfect crime, all right," he said. "You did kill him."

HOW TO KEEP OUT OF TROUBLE

Continued from page 28

husband and wife who speak perfectly good English actually do not speak the same language. For this reason *semantics,* the science of meaning, plays a prominent role in the new course. What do words really mean? If a man says, "Let's be fair about this thing," just what does he mean? Is his notion of fairness the same as yours?

"If we are going to get along with nations like Russia, we must understand her and not be annoyed by words used," Donham told one of his classes. "We should realize that other nations are equally irritated by words used by us."

Diplomat Balks at a Definition

Shortly before George C. Marshall became Secretary of State, Professor Donham met with a State Department official and asked him, "Why do you use the word *democracy* so much?"

"Oh, that's a very important word," the diplomat replied.

"The Russians use it quite a bit, too," Donham pointed out.

"Yes, indeed. A very important word," the diplomat affirmed.

"But do you think *democracy* means the same thing to Stalin that it does to us?" Donham asked.

"Well—" the diplomat demurred. He didn't answer the question. He simply repeated: "We've got to use *democracy*. It's a very important word."

Donham reminded the uneasy statesman that so long as democracy meant one thing to our State Department and something entirely different to Stalin, its use "simply concealed disagreement behind a surface façade of agreement."

Donham was glad to see that when Secretary Marshall stepped in, one of the first things he did was to define democracy so that no one in the world could have any doubt about just what it meant to the U.S.A.

Another leaf we might pluck from the Harvard book is the "concept of the total situation." Many a human has turned a simple problem into a towering difficulty by working on part of the situation instead of all of it.

Donham tells of a man who was terribly injured in a plane crash and found himself in a hospital with seven specialists going to work on different parts of his body. They strapped him and drained him and braced him and injected him and drugged him, until the poor man was more miserable than when he had been dragged from the wreckage.

He called in all his specialists at once and said, "Each one of you is a great doctor. But each of you is working on the part of me he knows about, without considering *all of me.* Not one of you is really interested in *me.*"

He then hired a general practitioner who was able to keep the specialists working in relation to the *total situation.*

Trouble lies in ambush ready to pounce on any of us who plays only part of a situation when he should play all of it. Mr. A, for example, refused to allow his wife's sister to come to their house. Strictly speaking, he was right. She was a shrew. But—the rest of the situation was this: Mr. A's wife was very fond of her sister. She got terribly upset over the conflict, and her relationship with her husband became dull and spiritless. The whole marriage was soured.

Mr. A, of course, was the loser. Far better to have surveyed the *total situation* and tried to improve his relationship with his wife's sister, or simply steeled himself to the fact that shrews exist, and thank goodness his wife wasn't like her sister.

But conversely, the Harvard savants tell us, problem situations can be turned to our own advantage if we keep an eye peeled for the extra bits and pieces that make up the total situation. Professor Donham tells his classes this story:

"In a poker game two players early showed their playing to be superior to that of the others present. As the game progressed, one began to win more consistently than the other. Afterward, when the winner was asked how he accounted for his success, he replied, 'Simple. Every time my opponent had a good hand, his Adam's apple moved up and down rapidly.' "

He was simply playing the total situation! In the bedrock business of solving a problem, Harvard has a good deal more than theory to offer. Just what should we do when trouble comes our way?

There are two steps to take, Harvard tells us. Take them, one at a time.

The first step is *diagnosis.* "We must start clinically, as a doctor does," Donham advises. "Our job is to gather all the facts on the threatening situation. We must do a lot of 'creative listening.'

"We have found, experimentally," Donham reports, "that if you can get a

man talking freely, getting things off his chest, it helps him in all sorts of ways—it relieves tensions, brings them out in the open. You discover that something has been bottled up, and unless you get it out in the open it continues to bother."

We must avoid moral judgments. Just size up the situation as it *is*. Never mind the *rights* and *wrongs*, because until the diagnosis is complete we haven't the slightest scientific basis for calling anything *right* or *wrong*.

The second step is *action*. Human Relations does not sit back on its professorial posterior and simply reflect. It acts firmly and decisively.

Professor Donham and his group never allow students to go into the action phase until they have spent a solid first semester on diagnosis. The professors want to "destroy the habit of looking for simple, predetermined answers to complex human problems." They deplore our all-too-native habit of "acting without thought."

Donham thinks it would be a good idea if we went around business offices and took down all those stern little signs which say, "Do it now!" He vastly prefers the signs which the International Business Machines Corporation has sprinkled through its buildings. They simply say, "Think."

Another pitfall of the action stage is sweeping generalizations, threats, ukases and the like. Donham tells his students, "Try not to stick your neck out by saying that the next time something happens, such and such a penalty will be imposed. It is an awfully hard thing to live down. Keep some loopholes for yourself and you will save yourself a lot of trouble."

Time is the vital factor in the action stage. Use all the time available, Donham counsels. When a lawyer has a problem he may have a month, or even a year, before any action is necessary. He would be foolish to cast the die in 24 hours and waste all the rest of this time.

A Lesson in Creative Loafing

Professor Donham, in his vastly productive seventy-one years, has avoided a good deal of trouble by what he calls "creative loafing." He likes to put his problems in the back of his mind and go off to his cliff-top home on Cape Cod and forget about them. Weeks later, after letting his eyes rove over the sand dunes of Bassing Harbor and drinking in the tart air of Pleasant Bay, he returns to work.

"The problems I put in the hopper when I went away are sifted and clear when I get back," says he.

Donham attributes the phenomenon to the two kinds of thinking human beings do. One is *concentrated*. When we're on top of a problem we concentrate on it, and the more we do that the more we see the problem and the less we see of the world around it. The second kind of thinking is *syncretistic*, to use George Elton Mayo's term. Here we relate the problem to everything around it. We begin to see the forest as well as the trees.

Action often comes as the self-propelled result of accurate diagnosis. The Harvard researchers warn us not to keep saying to ourselves, "What shall I do?" Rather they would have us say, "What is the problem? What are the facts?"

As Donham tells his students, "Keep your minds elastic. Facts develop in ways that should make you want to change your techniques and change your action . . . Life is like that."

Harvard got into the Human Relations business by having just that kind of elastic mind. The plunge was made by George Elton Mayo, who recently retired from his professorship at the Harvard Business School. Mayo went to the Hawthorne Works of the Western Electric Company, in Chicago, in the late 1920s to conduct research on the productivity of workers. He was struck by the inescapable fact that productivity had little to do with lighting, air, lavatories, lunch rooms, etc., but a whale of a lot to do with workers' *attitudes*.

So in 1928 and 1929 Mayo plunged into what he called "the twilight zone where things are never quite what they seem." He and his team interviewed 21,000 workers, spending half an hour or more with each. Surface appearances were shucked off like husks of corn. One worker admitted she disliked a supervisor because he reminded her of a stepfather she despised. Another said his speed of work had nothing to do with the management; it was governed solely by his co-workers. "I don't want them to call me a rate-buster if I work too fast, or a chiseler if I work too slow," he declared.

The Harvard Business School, under Dean Donham, became extremely human-relations conscious after Mayo's discoveries. Donham put a good deal of the theory into a book, Education for Responsible Living, in 1944, and found that one of his most avid readers wa Harvard's President James Bryant Co nant. Conant challenged him to put th theory into practice by starting a Hu man Relations course at Harvard, an Donham launched the three-year-old ex periment at the college in 1945, integrat ing it with the long-run research at th Business School.

Harvard considers it a roaring succes and hopes to continue the course on widening scale. Donham himself goes t Colgate University this fall to aid in similar Human Relations program ther

After thousands of years of lovin and hating one another, of building gre works in peace and pulverizing them i war, the human race is finally gettin down to fundamentals. *How to get alon with people. How to keep out of troubl* These, many wise men believe, are th keys to tomorrow.

Look Who's Talking!

By GURNEY WILLIAMS

YOU'LL pardon me if I seem to go around talking to myself, enunciating words as though addressing a backward child, making Donald Duck noises and nursing a split lip. Most of my friends understand this because they know I recently bought a wire recorder and began to invent new uses for the gadget.

1

Just to fill you in, a wire recorder is about the size of a table radio and has a small hand microphone through which sound is magnetically recorded on very fine wire. These sounds, unfortunately, may be kept indefinitely or played back any number of times; or, happily, they may be erased and the wire used again.

One of the first things I did with this arresting device was hide it in the bookcase and secretly record a cocktail party conversation. This experiment showed (1) there is nothing scintillating about small talk, (2) guests won't believe they said what they said, (3) no conversational

3

gem is ever heard by anyone until it has been repeated six times (after which nobody cares) and (4) this type of recording, played back twelve hours after the last guest has extricated his car from your hedge, is the best deterrent for overindulgence since the invention of gin and orange juice.

This test also proved that playing back cocktail talk without editing it can be hazardous. A lady guest confidentially told my hidden microphone her husband was a hopeless jerk while the hopeless jerk was out in the pantry getting her

5

another lemon phosphate. I unwittingly played back the remark and the husband showed such signs of irritation that his wife's eyes wouldn't focus for some hours afterward. Later I found out how to erase certain words and phrases from recordings, a procedure which has since averted seven other divorces and at least twenty-two fist fights.

Interviewing guests in the manner of an inquiring radio reporter keeps you on safer ground but takes some ingenuity. Handed a microphone and asked to say something, the average citizen blurts:

"What shall I say? Ha, ha, ha. Uhhh—are you recording this, yak, yak. Well, I don't know *what* to talk about, ha, ha. Oh, shut it off and let me hear what it sounds like! Duh!"

To avoid this—as well as the danger of the glib type who would rather drool into the mike for twenty-five minutes than leave glass rings on the piano—you should be prepared with stock questions such as: "What is your name, won't you speak a little louder and why don't you go home?" That's how I got the cut lip.

But probably the most insidious of all possibilities for the recorder is the so-called Wire Network by which I keep in touch with friends and fellow wire enthusiasts from coast to coast. Since be-

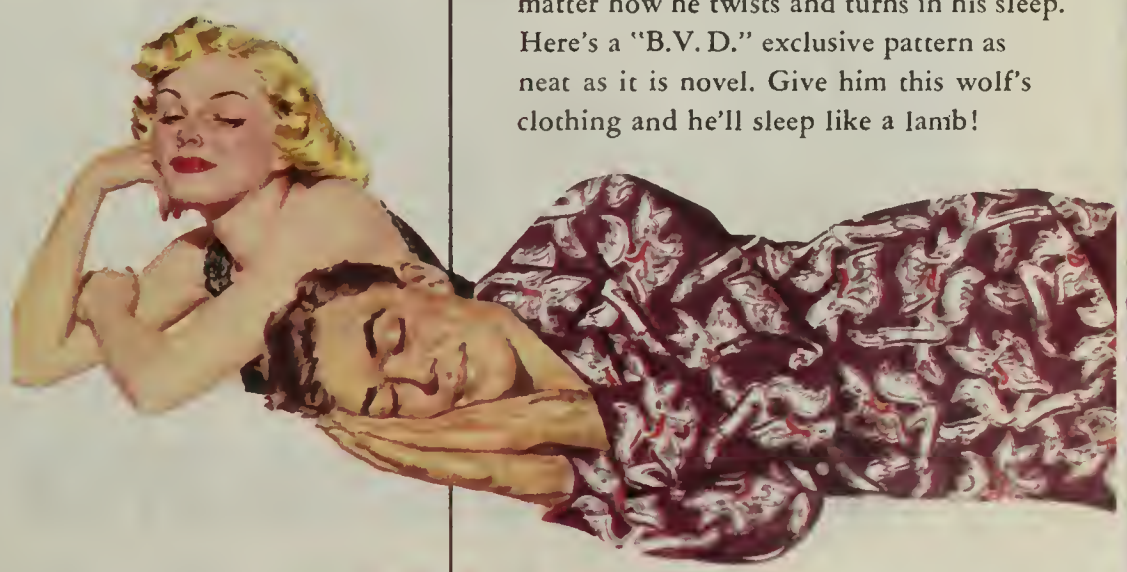
2

coming entangled in this web I have given up music, photography, playing ball with my young son and keeping the house in repair.

Spools of wire come by mail from all directions—and go in all directions. Dinner is ready, the dog has to be let out. I haven't written a check for the groceries, the boiler has burst. No matter. I've got to finish this half-hour program for Harry, 500 miles away, who has virtually wrecked his own

4

family life trying to entertain me with personal insults, trick sound effects and his favorite records (all of which I have in my own collection). Incidentally, this hobby settles once and for all the question of who talks the most, male or female. I have yet to hear a spool of recording wire on which more than 10% of the recording has been made by a female.



Having recorded speeches, sermons, symphonies, the cockpit noises of a DC-6, weddings and the screeches of birds at 4:00 A.M., I wish I could quit, but it's got me. My wife says if she rushed into one of my talking sessions with the news that the attic was afire, I'd undoubtedly drag the recorder out to the front porch and capture the thunderous arrival of the firemen. I probably would. Mrs. W. ought to be able to get the small fry and the insurance papers out of the house without *my* help. ★★★

IT HAPPENED TO A DOG

Continued from page 17

came out an inch. "Why do you think I bought him?"

Dave fidgeted. "He's a lot of dog for a girl . . ."

"Don't you think," Nancy suggested, "that might depend on the girl?"

Dave nudged me with his toe. I urged that we get some food while it was hot. On the way to a table I whispered to Dave, "I can't tell whether she's giving you the business or not."

"Guess not," Dave said. "Damned if I don't think she likes that crazy dog." He looked at me forlornly. "I've got to buy him back."

THAT'S what Dave thought. But Nancy wouldn't be budged. First, Dave said he'd made a mistake, he really needed Buster to run in the quail dog stakes. He didn't have any other dog with enough go. Nancy said she was planning on running Buster in those stakes herself.

Then Dave said the dog needed bigger country to run in. He would take him to Canada with the rest of his string next week. Nancy asked how about that setter that won at Grand Junction a couple of years ago. He was trained and conditioned in the South, wasn't he? Then, gradually, Dave began to reveal Buster's history, and his reason for selling him to Nancy. He offered to take a loss if she would sell Buster back to him. Nancy smiled and shook her head. She knew she had Dave over a barrel, and she was enjoying it.

"Are you afraid I'll make a winner of one you spoiled?" she teased. She winked at me. "Buster is just a big sissy. All he needs is intelligent handling."

Dave was caught in his own bear trap. All he could do was squirm. And from the way he looked at Nancy I guessed he would do most anything to get on the right side of her. I didn't blame him; if I had been twenty years younger I'd have done handsprings myself to catch her attention.

All the rest of that week, while he got ready to leave for the Canadian prairies with his bunch of field trial prospects, Dave tried to get Buster away from Nancy. But Nancy said she was counting on Buster to keep her company through the summer when all the interesting people would be away. Dave blushed like a little boy. He asked me, confidentially, to keep an eye on Buster and try to keep Nancy from taking chances with him.

Nancy drove into my yard a couple of evenings later. Dave was there; he had come to say goodby before he left for the prairies. Buster was on the front seat of the car beside Nancy, looking as guileless as an old redbone hound. Nancy got him out and posed him: she didn't even have a lead on him. She spoke affectionately to him, gently pushed his head around straight when he turned it, stood behind him with just the tips of her fingers under his tail. She put on an act of showing the dog off to me, but it was obviously Dave she wanted to be impressed by Buster's new tractability. I asked to see him move. Nancy placed a slip lead on his neck and clucked to him. He took two steps toward the shrubbery and froze in a high-headed, dramatic point.

"What's in there?" Nancy whispered.

There was no need to answer. From the blueberry hedge a mother guinea hen, followed by a dozen quarter-grown chicks, scurried across the driveway. Buster jumped. Nancy held tight to the lead, but it might have been a thread for all the effect it had. The guineas took to the air like partridges with Buster grabbing for their tail feathers. Nancy's calls only spurred him on. The guineas cleared the fence beside the barn; Buster drove straight into it. It would have broken the neck of any ordinary dog, but it just added to Buster's determination to eliminate that family of guineas. He shook himself, and started past the barn at a purposeful gallop. I saw tears in Nancy's eyes.

"He won't get away," I assured her. "There's fence all around the yard."

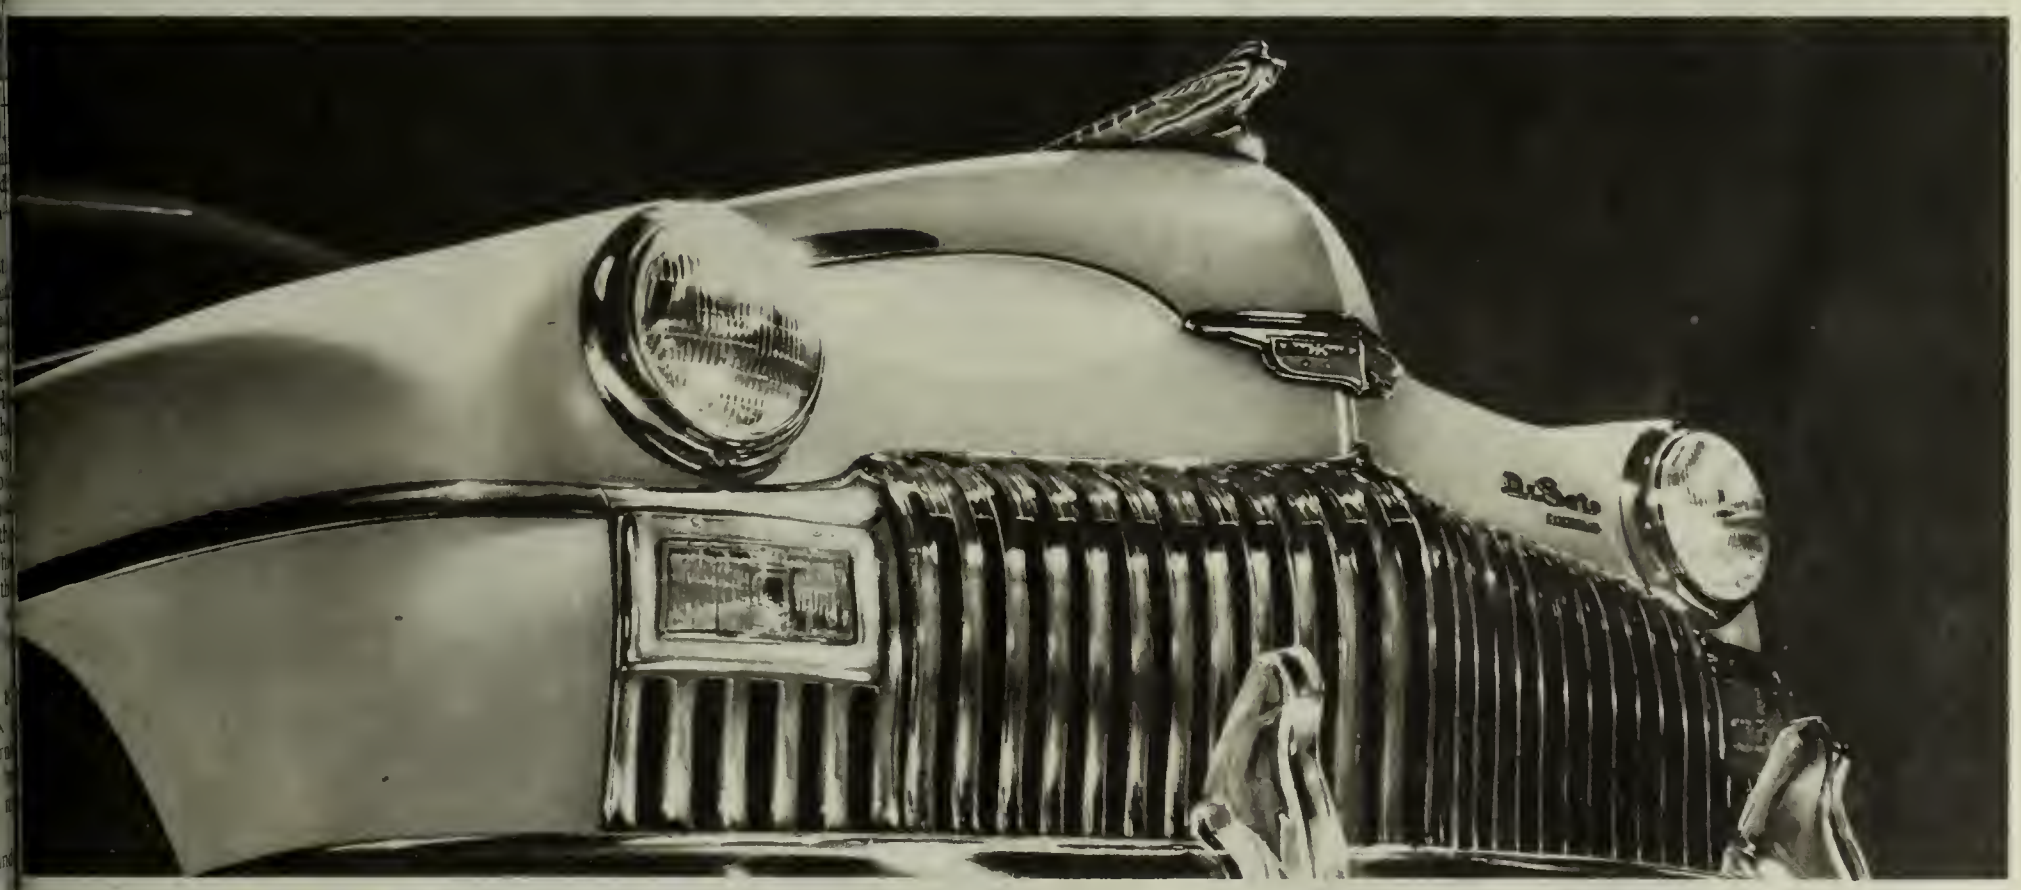
"You don't know Buster," Nancy said. "He can climb out of a well. He'll kill every head of stock on the place before you can say, 'Great Day in the Morning.'"

We all ran after him. At the end of the barn there was a gate with bars spaced just far enough apart for a small dog to squeeze between. Buster was squeezing when we got there, struggling to spread the bars. He got through just as I dived for him. Luckily, the slip lead was still on him; it caught on a bolt in the gate and tightened. Immediately, he calmed down. You would have thought he had no other interest but Nancy and me. He wagged his tail and grinned at us. I knew then what Dave meant when he said Buster was too smart to train.

Dave did a good job of restraining himself; there wasn't a trace of a grin showing on his face. He just looked at his watch and said, "Time for me to be on my way. See you in a couple of months."

Nancy scowled as she watched his car go down the driveway. She looked long at Buster. "This boy's education will really start tomorrow," she stated. She spoke softly and deliberately, through clenched teeth. I was glad I wasn't Buster. But I was glad too that I wasn't the one who had tackled the job of making a biddable bird dog of that grinning too wise renegade.

I FOUND out that summer how cunning and patient a determined woman can be. It looked like a one-sided contest. Each move Nancy made was solved by Buster in one lesson. He would co-operate so well Nancy was sure he was bending her way. Then, as soon as she relaxed, he would give her the slip and go off on a killing spree. She admitted she would have to start further back in his education.



She combed the county for the biggest, ugliest billy goat she could find, and put him in a dog-tight yard. She anchored some barrels on their sides in the yard so a dog could take refuge in them. Then she put Buster in with the big goat. He took one look, and headed across the yard toward the advancing billy, evidently aiming to meet him head on. Just before they met, Buster crouched low, jumped, and hit the goat on the shoulder. His teeth flashed, he shook his head once, there was a snap, and the goat turned over. Buster grinned at us as if to say, "Got any more goats? This is fun."

"I had a letter from Dave Storrie today," I said casually. "He'll be back in a few months." Nancy was stubbornly silent; the muscles at the corner of her jaw tightened. I went home to do my chores.

The first break came by accident, and I was there when it happened. Nancy had tied a gauze muzzle around Buster's mouth so she could treat him for threatening ear canker. She left him chained at the corner of the house while she went in for the medicine. A game hen with a clutch of tiny chicks ran past, and Buster lunged at them, pinning one chick under a front paw. The old hen went into action. She flew in Buster's face, spurred him, rode him and beat him with her wings. For the first time in his

"There is nothing better in the Market."

SEVEN WORDS THAT SET A STANDARD

WHEN George Garvin Brown created Old Forester 78 years ago, he did so to set a standard for fine Kentucky bourbon. Today, under the third generation of the Brown family, the label still carries the simple statement in the founder's original handwriting: "*There is nothing better in the market.*" And so true are these seven words that the whisky itself has become the choice of those who enjoy the finest.

fe Buster's all-conquering teeth and ws were useless to him. He gave in and ung his head to take his punishment. ancy nodded, her eyes narrowed.

The late goat pen became the home rounds of a succession of fighting hens ith their chicks. Buster, wearing a out muzzle, shared the pen with them. e learned respect and tolerance. Regnedly he would hie to a barrel and ay, his head inside and only his tail nd rear legs sticking out. The chicks ved him. They pecked at him, hopped n his back, finished feed he left in his sh. Soon he could be left with them ithout his muzzle.

Next, a new goat came to try where e first had failed. This time Buster had s muzzle on. When the goat advanced allengingly Buster showed discretion: e ran to the nearest barrel and ouched inside it while the goat beat a attering tattoo on it with his sledgeammer head. Nancy beamed. I wonered. He might forget these lessons hen he was rambling free over ten thound acres of open country.

Nancy had thought of that, too. I met r one day driving to the abandoned illips plantation. There was a half-ile-square deer pen on the plantation, nced with eight-foot link wire. She ured it would be Buster-proof, and ere were some quail in the enclosure.

When she turned Buster loose in the n he took a half-dozen jumps, stopped, d looked unbelievingly at Nancy. It d been so long since he had run without having to drag a heavy plowline it ok him a minute to get used to freem. Nancy hit the whistle twice; Bus- came to life. I saw then what Nancy d been daydreaming about: the big g floated through the broomstraw with high-headed style of a spirited range llion. He had class, the kind of class t makes a dog man hold his breath.

He raced straightaway down the edge the lot. While he was still ten rods m the end Nancy called and blew a g trill on the whistle to turn him. ster started to turn automatically, then ightened and deliberately raced away. didn't see the fence, camouflaged by dweed and trumpet vine; he hit it h the full force of his seventy pounds. looked around guiltily when he reapred, but went on hunting full tilt. lfway across the lot he jammed into a utiful point.

held her horse while Nancy walked to try to get her hands on him. There s no hurry; he was frozen and had no ntion of breaking. Nancy stroked , and pushed against his rear to help make him stanch. After she had snapped a rope on his collar she tossed her whip into the bushes ahead of him, at the same time sputtering through her pouted lips to imitate the whir of quail wings. It worked. A covey of twenty-odd birds flipped over the fence to a tangle of bamboo briar and myrtle.

"A hundred more lessons like that," Nancy said, "and maybe he'll be a bird dog."

"They don't hold field trials in pens," I objected.

Nancy smiled. She said that if she wasn't smarter than Buster she deserved to lose. But she had a scheme, she said, that she thought might make Buster forget all about his killing tours. I said I'd have to be shown; bolting and killing were well-developed passions in Buster.

AS SOON as Buster would hold the deer-pen birds for a quarter-hour, Nancy tried a trick with him that was new to me. She let him go in the pen and purposely stayed back. When she felt sure he had birds she talked in a loud voice to let him know she was near, but she didn't go to him for several minutes. Then, without saying a word to him, she snapped a lead on his collar and pulled him off his point. She took him back the way he had come for about a hundred yards, turned him loose and urged him to go back to his birds. Buster acted as if he didn't understand such doings, but he did stand the covey again halfheartedly. On his next covey find Nancy repeated the performance. This time Buster raced back to his birds and pointed stylishly. Nancy was jubilant.

"You've trained him to report the birds?" I said.

"Sort of," Nancy replied, "and the main hope is that he'll learn to like going back to his birds more than going off on a tour of sin. I have a hunch he learned his bad habits as the result of being lost on point."

The trick took hold. Within two weeks Buster would leave a point to find Nancy and lead her to the birds. Actually, he seemed to be more excited about going back to birds than he did about finding them in the first place. Nancy decided it was time to try him out in open country.

We cast him off in the pine woods; if he bolted there we would have a fair chance of running him down. We held the horses back, letting Buster get way ahead. Then we stopped and waited. Fifteen minutes went by, then half an hour. No Buster. Nancy looked worried. We had a smoke and moved ahead a little. I guessed it was about time to

GREYHOUND

start a dog hunt, and I was just beginning to say so when we saw him coming. Nancy was positive he was reporting. I wish I had a picture of her face right then. Buster waited for us, then turned and dashed to a lespedeza patch at the far end of the woods. He had birds, all right. Nancy stroked him some before she flushed the covey. Buster never moved. Nancy went back to him, got down on one knee and talked to him and hugged him. And I heard her mention Dave's name.

NANCY kept working Buster all that summer, and her hopes were high the day we drove to the Rocky Point members' trials. I noticed she had on new whipcord breeches and a well-tailored jacket that looked as if it had been designed more for smooth looks than for rough wear. Buster was big time, she knew; she'd spent nearly six months working him to a fine edge. If he didn't blow up and revert to his old ways there wasn't likely to be another dog there to top him.

The first person we saw as we arrived at the trial grounds was Dave Storrie. Nancy did a quick retouching job on her hair and face while he was walking over to our car.

"Hello, Miss Nancy," he said. "I hope your health is as good as your looks are. I've been needing to see you." I had never seen Dave so happy.

"Good morning, Mr. Storrie," Nancy replied. "I'm well, thank you."

This polite reserve didn't fit in with the anxious care she had just taken to have every hair in place.

"I expect I'd better see about getting my dog entered," she said to me, and got out of the car.

Dave was eager. "I was hoping to have a chance for a good long talk," he urged.

Nancy looked at her watch. "First brace is scheduled for eight," she said.

"Would you be free to have dinner with me at the inn tonight, Miss Nancy?" Dave asked.

"We have such a busy day ahead of us . . ." Nancy explained. "But thank you, just the same."

Dave watched her walk to the field stewards' tent. There was new confidence and pride in her bearing. "Miss Nancy doesn't forgive easily," Dave said. Then he noticed Buster in the back of the car. "Great gosh," he gasped, "is she running that animal today?"

"That's why we're here," I said. It was Nancy's party; I felt it would be more fun to hear Dave find out details from her. "How's your Scooter dog shaping up?" I asked.

It was the right question. Dave was so enthused about Scooter and how he had developed, how he ranged and looked on point and how well he handled, that he didn't notice Nancy come back. She stood, listening, until Dave stopped for air.

"It sounds as if a beginner wouldn't have a chance," she said. "Especially with a dog that couldn't be trained."

"I remember you said it depended on the girl," Dave admitted.

Nancy went to the car, opened the door and came back to us. Quietly she said, "All right." Buster jumped down and came to her and sat. He turned his head once to sniff Dave and then acted as if he had never seen him before.

"A steady dog," Dave said. "But will he stand birds?"

"It took quite a while to get him to like hunting again," Nancy goaded. "Somebody must have tried to train him not to hunt."

"Okay," Dave grinned. "Give me both barrels. I know I asked for it. But I'm still willing to buy him back and give you a profit."

"Money couldn't buy him," Nancy said simply. . . .

The stewards got the drawings of the braces done quickly, and called for the first pair. Dave was lucky; Scooter was in the first brace. He would have all the advantage of the early morning cool and damp, and he would be well rested if he were called back to run in Second Series. In our members' trials we try to have the winning dog actually run against the dog that's placed below him. It seems fairer, if the decision is close, and it avoids a lot of squawks.

I had rented a horse so I watched that first brace. Dave hadn't exaggerated; Scooter was on fire. He wasn't as big as Buster, and he didn't have the same magnificence when he was pointing. But he judged his cover well, handled birds confidently, and had wings on his heels. When the judges ordered the brace up Scooter looked as if he could have run at the same crazy pace all day.

Buster didn't go until midafternoon. It was too hot for running dogs, but Buster never paid any attention to weather when he was down with another dog. I heard Dave whistle appreciatively as he watched Buster break away, and he called, "Good luck," to Nancy. It was a good race; Nancy's dog found four coveys to his bracemate's two, and outclassed him completely in handling singles.

The judges asked to see Buster and Scooter run together. They had scored them all-even; they would let the dogs settle it themselves. "You can uncross your fingers, Nancy," I said. "It is working out the way you wanted."

The judges were ready; we headed the dogs and let them go. They started out like whippets. The way they raced each other for a couple of hundred yards I wondered if brotherly jealousy had raised its ugly head; they would race right out from under judgment if they didn't start hunting soon. Then they reached birdy cover, split and hunted independently. I saw Buster slow just a speck at the edge of a gum thicket, and his tail circled faster. Nancy called, "Point!" almost before he stopped skidding when he put on the brakes.

She dismounted and walked ahead of the dog as the judges came over the rise. She flailed the bushes, and fired a blank from her revolver when the birds burst out. Buster was steady to shot and wing. As she waved him on I heard Dave's voice from down the hill: "POINT!"

The country got rougher as we proceeded; the cover was so heavy handlers and scouts spent most of the time looking for the dogs. Each dog had five productive finds, and if there was any difference in their scores I couldn't tell it. But time was running out. One more covey find by either dog would certainly decide it. And that was when it happened.

BOTH Buster and Scooter had been out of sight for several minutes; they were getting dangerously close to being called lost. Dave started up one ridge, Nancy and I scoured the opposite hillside. With only a few minutes to go, we heard Buster crashing through the canes in a branch bottom below us. When he came in sight he seemed to be running aimlessly.

"He's looking for us," Nancy yelled frantically. "He has birds somewhere."

We ran our horses toward him; he spun and raced back through the swale and up the ridge Dave was on. Once he looked back to make sure we followed. We were still following when we heard Dave shout, "Point!"

Nancy and I got there at the same time the judges did. Scooter had birds locked up tight in a picture-book point. "Well," Nancy said to me, "that's that." She was fighting hard to hold back the tears.

Dave had ridden close to the judges. I heard him say, "Miss Nancy's dog had these birds . . ."

Nancy and I moved nearer.

". . . my dog located them after Buster backed off and went looking for her," Dave was saying.

I looked at Nancy. The tears were past controlling now, but there was a big smile on her face, too. I turned away. For the first time I noticed Buster. He stood down the hill a few rods, backing Scooter as stanchly as if he hadn't known before that birds were there. Giving credit when competition is keen isn't easy—even for an honest bird dog. What I was witnessing, I knew, was out of the ordinary. My voice sounded louder than I meant it to when I turned and said, "There's a gentleman." Nancy nodded in agreement. But she wasn't looking at Buster; she was looking straight at Dave.

When I saw Dave after he got home from the Southern circuit I kidded him about having to marry Nancy to get Buster back. Dave grinned. "Best deal I ever made," he said proudly.

THIS FASTENING METHOD "GROWS" GARDENIAS 6 TIMES FASTER

Improving on Nature, florists now fasten gardenia leaves to make corsages better. One of the largest growers upped his production SIX TIMES with Bostitch stapling machines. Workers are happy and costs are down.

OTHERS SAVE WITH BOSTITCH

Furniture maker staples plastic strips over rattan joints more neatly and securely at 30% lower cost with Bostitch tackers. *Bottle-cap manufacturer* cuts carton-sealing costs in half with Bostitch Autoclench staplers. *Market basket maker* also halves costs by Bostitching handles and rims.

YOU CAN SAVE, TOO

Bostitching offers you better, faster, lower-cost fastening of combinations of wood, metal, cloth, paper, plastics and other materials. The chances are that one of the many hundreds of Bostitch machines will fit your requirements exactly. 275 field men in 112 key cities in U.S. and 11 key cities in Canada are ready to apply 50 years of skilled Bostitch research and fastening experience to your fastening problems.

Ask Bostitch for suggestions that will make your production "grow", too. Send coupon today.

CONFESSIONS OF A RAILROAD COP

Continued from page 49

"This is it," I phoned police headquarters. Within three minutes a police superintendent and I had set up emergency headquarters in the station's Long Island Plaza and posted men to barricade all entrances.

Reinforcements fought their way in as pressure of the crowds increased, and 500 of New York's finest soon had the throng under control. The crisis then shifted to the subway platforms, where every train left people nearer to the platform edge. I saw several fall between cars or pitch onto the track within inches of the third rail before our frantic calls got through and trains ceased stopping at Penn Station. But no one was killed and few were seriously injured. Most of our casualties in the Big Snow came, ironically, from heat exhaustion.

Dinner with President Taft

People, singly or in crowds, have been my lifework. Looking back over the great and near great I've met, it's the homely human traits that stick in my mind. President Taft once invited me to dine with him on the Presidential car. The thing I remember most vividly about this kindly man was the speed with which he devoured the most enormous steak I ever saw.

After Harding died, I rode on the train that took Calvin Coolidge to Washington. It was a solemn occasion, and for the first hour of the trip the new President was silent. Finally I heard him announce to no one in particular but in a voice that could be heard throughout the car: "Don't feed any of those railroad people if I have to pay for it."

My favorite of them all was Franklin D. Roosevelt. One night, to win over a die-hard Republican friend of mine, I took him down on the platform where the Presidential car stood waiting for an engine change. We could see the President playing solitaire, alone except for Fala, his devoted Scotch terrier. We watched the pleasant scene while F.D.R. made a couple of quick moves and paused. Then the President took a quick peep at the top card of the deck.

"I told you," hissed my Republican friend. "He even cheats on Fala."

It was no use pointing out that my friend and I were peeking too.

No matter how dignified or aloof they are, most people will unbend with a friendly cop. The austere Princess Martha of Norway once sent me a new hat (mine is usually pretty battered) and invited me to Norway. "You'll own the place in a month, Jim," she said.

But Penn Station kept me too busy and too interested for me to want to leave it. As lieutenant, I was head of a private police force organized in three 12-man shifts.

The huge arcaded city-within-a-city I patrolled covers 28 acres of mid-Manhattan. Half a million people go through it every day. It's connected with the outside world by tunnels—four under the East River, two under the Hudson. Part of my job during the war was guarding the floodgates installed against the threat of air raids or sabotage. The tunnel entrances are all below sea level and, without the gates, a break in any of them would send river waters crashing through the station and most of Manhattan's subways, conduits and subbasements.

A red light flashing just over the main information booth means trouble somewhere in the station. Whenever I was on the prowl, it meant getting in touch with my office fast. I still find myself reaching for a phone whenever I see a light blink.

"Jim, an accident on track 17 . . ." It might be a drunk—or a perfect lady who tripped in her high-heeled shoes. We have them every day, and there's a hospital and staff doctors and nurses to take care of them.

"Number 8 reports a death, Jim . . ." The station has its own morgue, too, and since most state laws require stopping the train for an inquest, porters generally "discover" deaths after the train has reached New York, where station police are permitted to remove the bodies. There was generally some evidence of a pitiful solitary struggle against death in the night.

In one berth I examined, a woman had used lipstick to scrawl a quick farewell on the window. The single word she wrote was "Love."

"Two men and a couple of dogs to see you, Jim," my sergeant said over the phone one day. It wasn't a gag. It was the Federal Bureau of Narcotics, acting on a tip that dope was coming in on the Mexico City through car. I joined them.

As the passengers filed out, there was a low growl, followed by cries for help. The dogs were snarling over a man they'd downed just as he was about to go up the escalator. We removed $300,000 of narcotics from the bags he carried.

These dogs—"dope hounds"—are used regularly. I have never known them to make a mistake. To test them, one of our men sealed marijuana in Cellophane, hid it in his wallet and walked by the dogs. He was promptly mauled.

Railroads are plagued by every known variety of theft. At various times I've tracked down everything from an engagement ring to a tank car full of bonded whisky which mysteriously had turned to water somewhere en route between Peoria and New York. The problem was to find out where the switch took place.

One swallow was answer enough. Nobody who has ever tasted Schuylkill River water could mistake that savor of hydrogen, chlorine and old sandals that gushes from every tap in Philadelphia.

Then there's the man who boards the swankier expresses with an empty suitcase, and stuffs it full of fur coats just before a stop. It's the passenger's responsibility, not the railroad's, which stands ready to check your valuables en route at no extra charge. But, movies to the contrary, there is surprisingly little crime aboard either day coach or Pullman. It's the station itself you have to watch.

You may not be aware of it but you can't spend much time in Penn Station without being watched. We suspect you, not of being a thief, but a sucker. As soon as you catch your train we lose interest—provided you haven't left your baggage or your babies. We collect an average of 700 lost items a day, and you'd be surprised at what we find—artificial limbs, for instance. It's hard to imagine how the owner could forget them. But we pick up an arm or a leg from Pullman berths every week or so.

How do we spot the crooks in a crowded station? A man's face will tell you something. The crooks' voices and smiles, the way they walk, are ever so slightly false. If their gaze isn't shifty, it's likely to be too hard, too steady. A crook who's served time is easiest to spot; even six months of prison mark a man for life, just as a beating makes a cur of a dog. The way people react to arrest tells something, too. The innocent man usually loses his head. The professional thief whines, "Aw, gimme a break."

Unattended luggage draws thieves as honey draws grizzly bears. We try to keep an eye on it for half an hour, then check it in the parcel room. When the breathless passenger rushes in the story is always the same: "I just stepped away for a minute and it was gone."

Those metal baggage lockers you find in every station have been a godsend to the bag thief. Placing his loot in the nearest locker, he strolls to the station bar, orders a drink and summons a redcap. He hands the key with a dollar bill to the porter and directs him to carry the luggage to a cabstand, where he will be waiting for an easy getaway.

The lockers are opened every 24 hours and the contents removed to the parcel room. Every collection yields its pile of stolen goods, knives, guns and narcotics, a running diary of city crime.

The only locker crook you passengers have to look out for is the fellow who hangs around ready to give you change when you don't happen to have a dime. Always helpful, he inserts the dime himself, palms the key and hands you a phony. The moment you're gone he removes your bags and ducks into the nearest subway—unless we nab him first.

The vulture among thieves is the confidence man. "Helpful Harry" was typical: He always picked frail old ladies.

"Did you drop this?" he'd ask a victim he'd followed to a quiet corner.

As she would open her bag to make sure, this guy would grab it, knock her unconscious and saunter away. We got our first clear description of Harry last year from Mrs. Minnie Mills, eighty-seven, of Los Angeles, after finding her unconscious under a stairway in Penn Station. Later she died, but not before identifying her assailant. We spotted him ducking into the subway and immediately phoned Inspector Peter Hogan, my opposite number at Grand Central Terminal. Within the hour, Helpful Harry was on his way to jail and today he's serving a 20-year homicide charge.

Crook's Ignorance Betrays Him

Once in a while, a cop is lucky enough to catch a con man in the act—like the time I noticed a man bending over an elderly invalid in a wheel chair. He was taking the old man's pulse—with his thumb! Anyone who's had experience with doctors knows they take the pulse with the index and middle fingers. I caught this impostor with the goods, some $500 removed from the invalid's wallet while "checking" his ticker in the guise of a railroad physician.

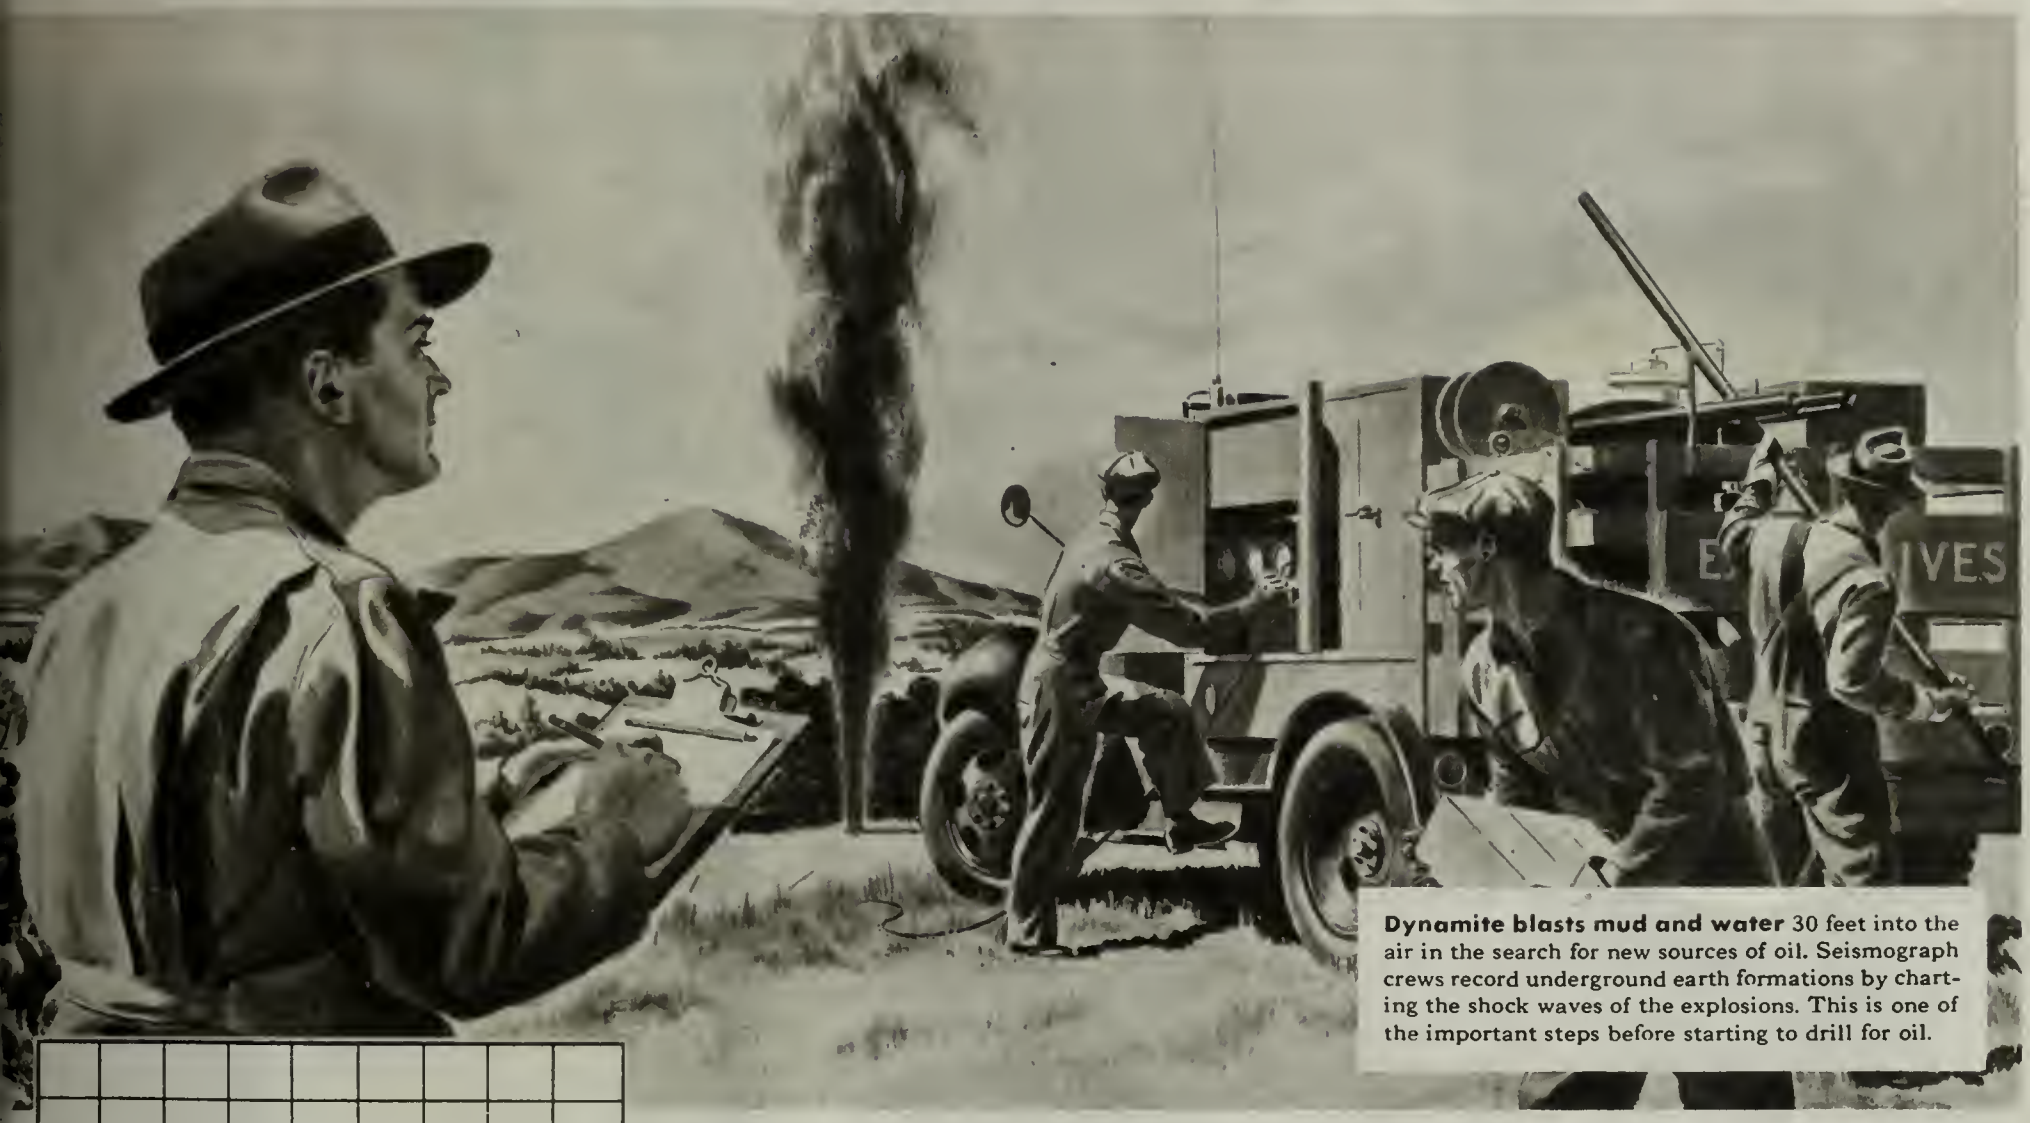
I think pickpockets take their graduate courses around the Penn Station ticket windows.

The "dips," as we call them, generally work in threes. "A" lifts your wallet, often after slitting your coat with a razor to make it easier. The wallet passes quickly to "B," who hands it to "C," who gets lost fast. "A," the virtuoso of the team, is the one you grab in the unlikely event you feel his touch. His "Go ahead and search me" is a masterpiece of outraged but patient dignity.

As a cop I've spent most of my life looking for trouble. So if I've painted a lurid picture of travel pitfalls, please remember I've dug up more skulduggery in an average day's work than you're likely to experience in a lifetime of travel. The railroads are freer of crime today than ever before. But for all that, here are a few pointers for your next trip:

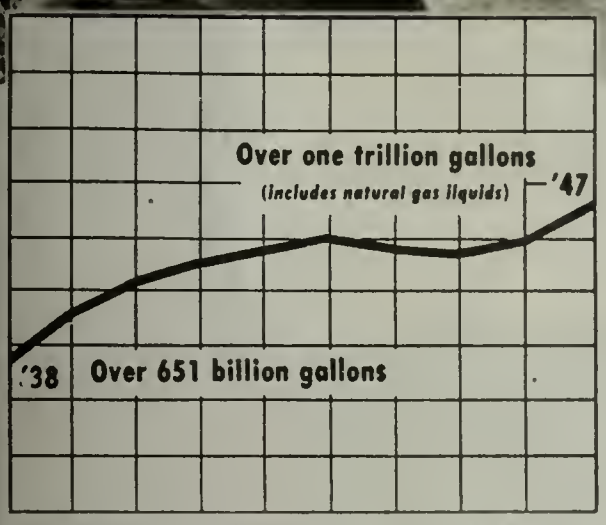
1. Remove your ticket money from your wallet before entering the station. Don't keep your ticket with your money.

2. Rely only on redcaps to carry your bags. They're all investigated, and I've never known a wrong one. Many are doctors, ministers and students.



3. Carry a minimum of cash. Use travelers checks instead.

4. Ship your valuables in baggage checked through on your ticket.



5. Avoid "Helpful Harrys." Mother's rule about never speaking to strange men goes double in stations.

THE END

HOW 34,000 OIL COMPANIES SERVE THE NATION AS...

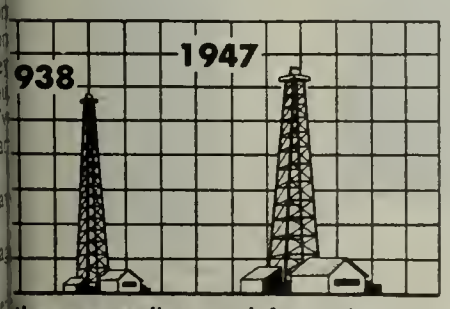
Dynamite blasts mud and water 30 feet into the air in the search for new sources of oil. Seismograph crews record underground earth formations by charting the shock waves of the explosions. This is one of the important steps before starting to drill for oil.

THE SEARCH FOR MORE OIL gives America greatest reserves in history, as over 13,000 producing companies uncover new sources of oil. Oil reserves are produced as rapidly as possible without causing waste of our future oil supply.

Oil reserves reach all-time high

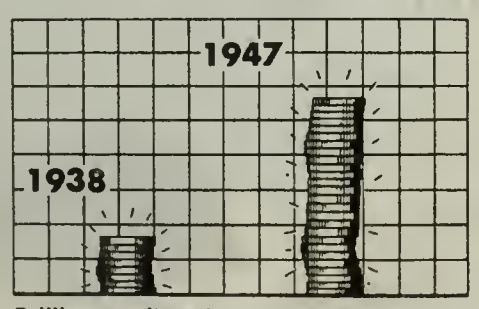
Greatest Drilling Activity in History

Boosts Current Production to New Peaks . . .



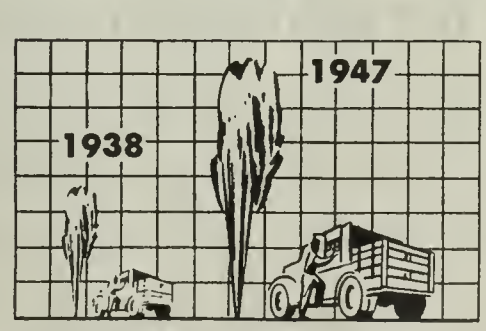
Increases Nation's Future Supply!

AMERICA is now using *more* oil products than ever before—yet our *underground* proved reserves are at the highest point in history! Yes, the oil industry has been doing a two-fold job—keeping you supplied with ever-increasing quantities of petroleum products, and at the same time working night and day to see that important reserves are maintained for your future use.

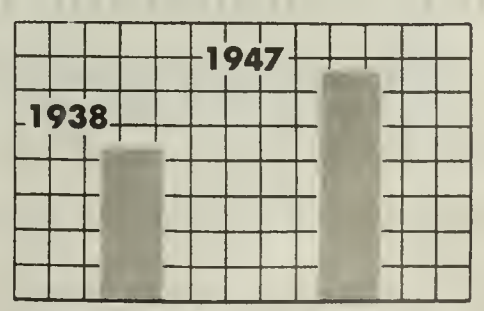


Aided by the latest scientific instruments, exploration crews search swamp and mountain, desert and ocean, seeking underground formations that indicate where oil might be hidden thousands of feet beneath the surface of the earth. Last year, their search for *more oil* led to the completion of approximately 18,000 new producing wells . . . helped make 1947 a record year for oil production. Over 77 billion gallons of oil were produced in all — *and at the same time a trillion gallon underground reserve was maintained!*

Every branch of the industry is working round-the-clock to see that you get gasoline for your cars and planes . . . lubricants for industrial uses . . . fuel for farm tractors and trains. As more petroleum products are delivered to you this year, be sure to use them *efficiently*. Oil is energy for America. Oil means more comfort, better living, greater convenience . . . for *you*.



OIL INDUSTRY INFORMATION COMMITTEE
670 Fifth Avenue, New York 19, N.Y.



the never-ending search for petroleum, new ls are being drilled every day. There are now re than 430,000 producing wells in the United tes, compared to 369.640 in 1938.

Drilling an oil well is expensive business! The average cost of drilling a well today - *triple* what it cost in 1938—is estimated at $70,000 . . . but some wells cost more than a million dollars.

Exploration crews pioneer the search for oil . . . use latest scientific equipment to locate oil and guide drilling operation. Since 1938, number of exploration crews has more than doubled.

America's total petroleum output goes higher each year . . . is now at the highest point in history. Over 77 billion gallons of oil products were produced last year . . . a 53% increase over 1938.

There's something to be said for both sides...

This side of the fence, you see a super-luxurious leisure coat in the finest, softest suede.

On the other side — an inexpensive wool jacket built for hard work and hard wear. Rich suede and rough-and-ready woolen share one important quality feature: *both* close smoothly, perfectly, with the Talon slide fastener. For the same Talon fastener that's an established custom in custom-tailoring is so inexpensive — so widely used — you'll find it in jackets at *every* price!

Whatever you buy — whatever you pay — get the extra value of the Talon slide fastener.

THE QUALITY SLIDE FASTENE

BILLIE BURKE—HER STORY

Continued from page 18

baby." One of my earliest memories is of Mr. Bailey's catching me up in his arms, tickling my nose with his great red beard, and calling me "Little Billie."

Billy and Blanche Burke would have done well to accept Mr. Bailey's offer. A few years later Billy tried touring the country with his own circus, a small affair, but the crowds stayed away and the enterprise folded. I remember vaguely that we had frugal days in New York, that my father worked small-time engagements, but then, with incorrigible optimism, he organized a new troupe and headed for London. I was eight years old.

Billy's entertainment was called "Billy Burke's Barnum & Great London Circus Songsters." It was billed as "Containing a Collection of the Latest and Best Songs of the Day as Sung by America's Greatest Clown with a Vast Collection Set to Music Expressly for This Work." But that too was not successful. Billy was soon playing the music halls, singing his songs. I think he did pretty well, but he was never a star.

A Question of Christening

It was during this period, when we had diggings on Kennington Road in one of those dreary London flats in which the landlady fetches your mutton on a tray and your bath in a bucket, that I met with the Reverend Mr. Kishborn at St. Margaret's. What with traipsing around the United States and moving to London, my religious education had been neglected. I had not been baptized or even officially named. I told the handsome curate that I wanted to be named "Billie," for my famous father. "There are so many things I like about the British. Most of all, I think, I love their sense of humor. A Britisher will understate you always, deadpan as a stage butler, but laughing inside all the time. The Reverend Mr. Kishborn who must indeed have been astonished already by the improbable child that I was surely, with gilt-red hair swirling around my shoulders and my little piping voice, accepted me and my request blandly. I explained that I was afraid of going through life as "Ethelbert," or "Bertha," or "Thelbert," all of which I thought were absurd names for a redheaded child, and couldn't I please be called "Billie" after my father?

The Reverend Mr. Kishborn put his tongue in his cheek and asked me for all the names in my family. I told him. Then he said, "But won't you be named 'Mary,' just for me?" Why, I was delighted, of course. I would have been named Gorgonzola, just for him. And that is how the name of Mary William Ethelbert Appleton Burke is registered at St. Margaret's, solemnly attested by the Bishop of London. I wish John Drew had known all that.

London was cold and harsh in winter. Trying to make your way through the fog was like pawing through hanging damp blankets. But, ah! when June came, when the hedgerows were green in the suburbs, when boys and girls punted on the Thames, when Piccadilly and Kensington Gardens blossomed with flowers and nursemaids, and those pink-cheeked, clear-eyed British girls! There's something about fetching up a girl in a fog, scrubbing her in a tin tub and feeding her on mutton. It makes her beautiful.

We walked in Chelsea sometimes on Sundays, looking at the great houses. I remember that Billy Burke said this was the section of London where everybody lived and nobody was ever born. He said even the dogs barked with a British accent.

I snubbed my nose on the windows of the smart shops in Mayfair, followed the lamplighters around as London's dusk fell, listened nightly for the crashing peal of the great bells of St. Paul's where I was later confirmed. There were no planes overhead in those days to frighten a London child, not even an automobile to run her down.

In the evenings sometimes, or on holidays, Billy Burke would take me in his great swivel chair and we would gyrate wildly around, singing "Paddy Duffy's Cart" at the top of our voices. He told me endless stories, made little jokes, and mimicked all the great figures of the day. I know now that I owe him a great deal. It was all fun and clowning, but unconsciously I was learning how to make people laugh.

I went to Mrs. Bailie's school (where I was called "Ethelbert") and sometimes went backstage on Friday nights to see Father work with a comedy mule. It seems very curious to me now, but I was never stage-struck. I was not even interested as a child in going to the theater. I was a shy, wistful sort of moppet who never in this world would have got ahead if it had not been for my mother.

She decided that I was going to be an actress. Now, Mother had no theatrical background whatsoever. She paid little attention to the circus or to the stage. I showed absolutely no precocity or talent—except, perhaps for a trick of mimicry which I inherited from my father. But this determined woman decided that I was going to be a great actress. Or a great opera star. Or a famous dancer.

It distressed Billy Burke. I remember that I huddled on the sofa, frightened and whimpering while they quarreled about whether I should become a celebrated actress or not.

"She doesn't want to, she hates it, she is shy and retiring, you will ruin her," Billy Burke argued.

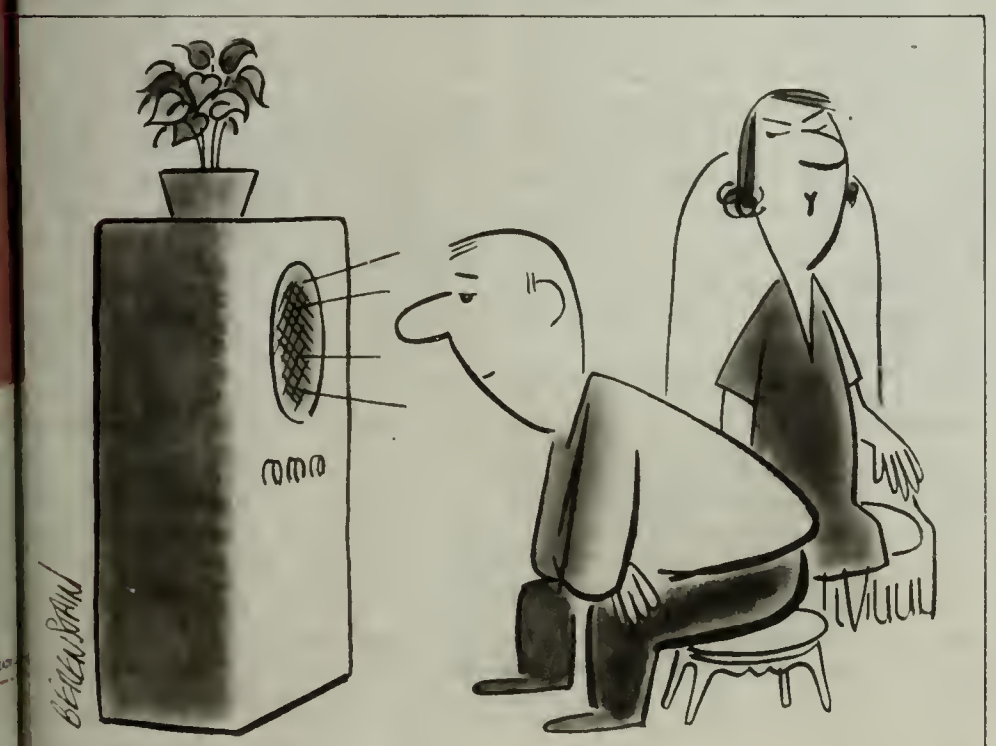
But my mother stuck out her firm, small chin and announced that I was going to become a star. She wasn't sure what kind. Apparently, it made small difference to her.

As for my father's objections, she treated him precisely as she always treated me—as a child.

Trying to inspire me, Mother dragged me to see Ellen Terry and Sir Henry Irving in a great production of "Robespierre." I was as apathetic as a cabbage. I dreaded the notion of getting up on a stage and speaking a piece.

Oh, some fantastic things have happened to me, some amusing things, glamorous things, happy things—mostly happy things—and some sad and tragic things, very tragic things—but I might as well face it. Even today I am the clinging-vine type. I'm not an enterprising woman. I *enjoy* clinging.

Operatic Career Is Abandoned



But to school I went, to learn how to act. I had a divine singing teacher, Madame Louise Dauste de Fortis, who called me "an enchanting little person" and offered to finance half the expense if Mother would send me to Italy to study for opera. But by this time Mother wanted quicker action, so my grand-opera career was tossed overboard. Possibly Mother had a definite goal. If she did, she never divulged it. I studied elocution from Rosina Phillippi, ballet dancing from Professor D'Aubin, who finally discarded me because I never could get up on my toes. He was very sweet and never made love to me.

Yes, I began to experience that kind of thing early. I suppose that is what my mother saw—that most men are impelled to reach for a redheaded girl if she is reasonably pretty, and shy, to boot. At my age now, I have no false modesty; a good many men have reached for me from time to time. Some didn't when I hoped they would.

At any rate, I crossed London by bus in those days to take my lessons, with wet straw up to my knees in the horse-drawn vehicles, bumping along sadly to learn how to be an actress. Sometimes I went by cab, when we were flush. The hansom cabs were wonderful, their drivers the comedians of the world. They had their lap robes, flowers in their buttonholes, and held their whips like scepters, condescending to the multitudes. I recall one old fellow who often drove me. One day he yelled an especially gay greeting to a confrere, looping his long whip into a noose and waving it at him.

"Do it to cheer 'im up," he chortled, leering at me. "You see th' noose? 'Is brother was 'anged the other dye. Cheers 'im up, y'know." And he would grin at his friend and waggle the noose.

My first opportunity to be an actress on the stage came when Mother wangled me a chance to sing some little songs—

"... The score is 4 to 2, and it's only the first inning of the first game of this Sunday's double-header ..." STANLEY BERENSTAIN

"coon songs," they were called then—at Berkhansted, across the river from London. I was fourteen. I did a few poor little imitations, sang my ditties in a dejected chirp, and tottered to the wings. My first audience hooted at me. It was so awful and scary.

I didn't cry. I was simply frightened and glad to get out of it. But my indomitable mother took me in hand, taught me the next afternoon to put my songs over with full voice (my voice was always small) and made me go on again.

I wish I could report that my first real taste of theatrical success, a full burst of applause, inspired me to reach for the heights. It didn't. I was merely a willing little girl, not so badly scared now, doing what her mother told her. I did *not* want to be an actress, even when the audiences applauded and called me back for bows and encores.

My next engagement was up in Sheffield at some forgotten theater where all I had to do was lie on a rock with my red hair carefully arranged to look careless. The act was billed as "The Sleeping Beauty and the Yellow Dwarf," and I was no contribution to the drama.

Then I worked at the London Pavillion for 10 pounds a week. I cannot imagine at what cost of beseeching, promising or threatening my astute mother got me this engagement, but this time I sang my small songs with confidence and had enough sense to smile at the audience. Indeed, I was getting a little saucy and mischievous, learning to flirt with the people, now that my terrors were gone. It was a lucky thing.

Five-Pound Role in a Musical

Leslie Stuart, who had done Floradora, was writing a new show, The School Girl, and he sent word that he had a small part for me. My mother accepted before he could catch his breath, although the salary this time was only five pounds. Stuart took me to see George Edwardes, the producer, and immediately these two began to mutter and to build up a mystery. It was something about a song I was to sing, called Mamie, I Have a Little Canoe.

Charles Frohman, the great American producer, had one of his most famous actresses in this show, the celebrated beauty Edna May. There was also Marie Studholme. The game was not to let either of these two jealous beauties hear my song, which was suppressed all during rehearsal.

I was not allowed to sing the canoe song until the dress rehearsal. It was a simple but catchy tune, done with pantomime, as if four of us younger girls were paddling a canoe. Inexperienced show girl that I was, I hadn't the slightest notion how it would affect the Misses May and Studholme.

These sophisticated ones instantly knew the song for what it was—the hit tune of the production. Both threatened to resign immediately, sulking in their dressing rooms like offended queens. What conniving went on backstage at the Prince of Wales Theater, what cables popped across the Atlantic between Frohman and his beloved star I never knew, but there was a bitter controversy. Still, Edwardes and Stuart won out and the show opened the next night.

Do not tell me that the English are cold, impassive people. They roared their applause, stamped, yelled, and whistled for the canoe song. It was like a tidal shock smashing across the footlights after my rather quiet number. I fled, forgetting to curtsy, bumping into guy ropes, and fell gasping into the arms of our stage manager, Mike Malone.

"They hate me!" I sobbed. "It's awful! What are they doing?"

Mike grabbed me by the wrists and jerked me to my feet like a doll.

"Get on stage. Sing it again," he ordered. I gasped that I couldn't.

"Stop it, you silly little redhead," Mike said. "Get out there before I slap you." He raised his big hand and was about to do it, too, when I ran back on stage. We discommoded that whole opening night with bows and encores.

The School Girl ran for more than two years and I was a celebrity. I remember my excitement when I discovered that Ellis & Walery's, the most fashionable photographers of the West End, had their windows full of my pictures—and that they were selling right along with those of Lady Randolph Churchill, Queen Alexandra, and the beautiful actress Gertrude Millar. I was eighteen years old, and the year was 1903.

Instead of being called "Copper knob," I was now dubbed "The American Flapper." I have not consulted Mr. H. L. Mencken, but I think this is the origin of the term "flapper." Certainly, my red hair flapped, not by theatrical design, but because I was too lazy to fasten it up. I rather liked it that way, too.

London was enchantment then, and I was deliciously aware too that it was full of interesting sin. This was not for

"I'd love to go to the movies with you, Gerald, but I can't get a baby sitter"

COLLIER'S — NED HILTON

me, for I was a pious child whose mother waited in the wings and escorted her home after every performance, but my little friends Polly and Percival, who sang the canoe song with me, used to whisper to me of some of the fancy goings-on I couldn't help but see.

All the beauties of the day were in The School Girl. I remember Clarita Vidal, famous and smick-smack, who posed as if she were made of wax, with just one expression of sheer beauty. The Maharaja of Cooch Behar came nightly in an elegant coach with his great white turban dripping with jewels and his hands full of gems to pay court to Edna May. The toffs of London stood at our stage door and escorted my friends to the Savoy, to Romano's, or to the Café Royale for a cold bird and a bottle and who knows what sophisticated revelry. But I never saw it. I went home with Mother, wondering.

By this time I was becoming aware of some of my possibilities and some of my limitations. I knew that I would never be an opera star, or even a musical-comedy star. My voice was too small. Leslie Stuart encouraged me, but he had no new play in which I might have a chance.

Meantime, while I fretted, my best friend, Polly, and I were enormously wicked in The School Girl. We used to take orange peels, slice them to represent teeth, and when our chance came to turn our backs to the audience, stick them in our mouths and grin at Edna May while she sang her song. Also, for sheer cussedness, we would step out of our shoes during a number and leave them on stage for other players to trip over. Miss May complained sweetly but ineffectively. Mike Malone would gri and threaten to suspend us. But w were the hit of the show and we knev it and we continued to make orange-pee faces at poor Edna, who endured u somehow and had long since generousl forgiven me for the canoe song.

I dreamed then of fashionable gentle men drinking champagne from my slip pers, but if this tribute was actually eve paid to an actress I never saw it. In onl a few years, however, my red slipper were being stolen. I was closer to sta dom than I knew.

A Contact with Charles Frohman

I had a queer little meeting wit Charles Frohman, who was to mean s much to me later in New York. He wa going to take The School Girl to Ame ica, and I wanted to go with it.

One day I was lunching with a bea at the Carleton Grill. He was my fir real beau, an Irish boy, with a commi sion in the British navy, a resoundir title and a castle in Devonshire, and loved him desperately, of course. W talked of getting married, but I put hi off, with an eye to becoming a star, a we were arguing fondly about that wh Mr. Frohman came in with a friend. S without stopping to think, I popped in my big hat, trotted over to his tal and stood humbly by until he notic me. I guess I quavered.

Frohman had the greatest stars of t day under contract—Maude Adar John Drew, E. H. Sothern, and Jan Hackett, great names like that. was a small, round little man with strong, protruding lower lip and co pelling eyes. He had virtually no s tem of communication. He spoke unpunctuated telegrams. Yet Somer Maugham, Sir Arthur Wing Pinero a Sir James M. Barrie adored him a wrote their best plays for him. It tc me years to understand why.

Mr. Frohman told me coldly tha could go to New York with the co pany. "But Edna sings the canoe son he added.

I went trembling away, for The Sch Girl without my song was no show all for me.

I suppose I owe everything to Fr man. I even owe him that chilly re tion, for I stayed in London and worl with the great star and producer Charles Hawtrey. Hawtrey put me i comedy called Mr. George, which tur out to be a wretched play for him bu delight for me. I had dreamy, expens clothes, the designing of which Hawt himself supervised: organdies with l set in; pastel-blue taffeta around shoulders, and a parasol, with a dashing hat.

Hawtrey mounted his productions v enormous distinction, selecting ev

Joe Vaughn "knows his onions"!

1. Joe Vaughn and his brother run a food store in High Point, North Carolina. Maybe not the *biggest* market in town—but you'd find it one of the best! Joe's plenty shrewd, but never "sharp." He takes pride in giving his customers the most he can for their money. "But," says Joe, "I wonder if a lot of business firms, today, aren't making too much profit."

2. That same thought is often expressed by thousands of other Americans. Perhaps you yourself have thought that manufacturers' profits are too high. In a recent nation-wide poll, a great many folks guessed that industry's profits take a pretty big chunk of the sales dollar. Then they were asked what they thought would be a *fair* profit for industry to make. Most of these same people said *from 10 to 15 cents* out of each dollar of sales.

3. How does that check *with the actual facts? Government figures show that industry averages less than half that much profit!*

4. So you see, industry's profits are a lot less than you may have thought. And remember, about half of what industry does make is plowed right back into business to help pay for the development and progress that produce more goods, more jobs, and greater security for all . . . That's how the "profit system" works to help give you and all other Americans the highest standard of living on earth!

piece of china, every piece of furniture himself. But he himself looked pretty awful, poor fellow. He was a large man, with big beautiful brown eyes. He was a rascal, very cavalier with the girls, attractive as a man could be. But his period costume didn't happen to be flattering to him.

Sir Charles frightened me, in a not unpleasant way. There was a big scene, which fetched down the curtain, in which he unwound my wide Greek scarf, leaving me in nothing but my chemise, backstage in darkness.

My maid was always stationed in the wings to rush to me with a dressing gown, which she did with a desperate lunge every night. I would stand there, shivering and curious, blushing all over, wondering what would happen if Sir Charles got there first. He never did. But I think he tried.

I owe him so much. He coached me (properly attired) for hours. He patiently taught me every nuance, how to walk and how to sit, and how to act as if I had not come from musical comedy, and the play was a hit. When Charles Frohman sent for me in 1907, to be John Drew's leading lady in My Wife, I had already arrived on the London stage and I came to America with Hawtrey's blessing, promising to return the next season. Billy Burke, my father, had died in 1906. He used to say, "I'll see my baby's name in lights on Broadway yet."

Definitely a Grand Entry

I arrived in New York rather grandly with a beautiful new Italian car, a Scotch maid, and an English chauffeur. I had begun to appreciate the glitter of show business, to take attentions for granted, as the young always do. It was some time before I knew frustration and sadness and what it was to be perishingly in love with a man who could have any beauty in New York for the beckoning.

I was surprised by the way an American play was put together. At the first rehearsal, I turned to Mr. Drew and asked him:

"Mr. Drew, is this the way you want me to enter? Where would you like me to cross?"

Mr. Drew was astonished. "Dear child, do it any way you like," he replied.

To my amazement, a small man named William Seymour, who seemed to know all about the theater, was actually telling the great John Drew how to speak and where to stand. In London, the great actor-managers like Hawtrey or Wyndham always supervised every meticulous detail, placed the cast, changed their lines, and supervised the sets. It seemed odd that a great artist like Mr. Drew should take direction from anybody, but I soon learned American ways.

This was the play that made me a star overnight, but to tell the truth I didn't know what had happened. The opening was no trial. Mother had coached me so thoroughly in my lines, as she always did, that I knew them upside down and sideways. Mr. Drew was as casual about a New York opening as if he were merely stepping over to the Players to shoot a game of pool. All through the play he murmured extraordinary asides to me, tomfoolery and ribaldry, and we waltzed gaily through our three acts, almost laughing.

There were twenty curtain calls—or thirty. We bowed and scraped and simpered at the audience. Mr. Drew was in a hurry to get off because the lovely Margaret Illington was waiting for him, that tall, dark, Indian-esque beauty who was married to Dan Frohman and then to Major Bowes. No one blamed her for loving John Drew. Everyone did.

And so, with all this nonsense, I honestly did not realize the big applause was for me and that I had been born in New York that night—a new star.

We went on tour with My Wife, and it was a series of parties from Chicago to San Francisco. In San Francisco, we entertained what seemed to be all the officers of the Pacific Fleet, which was anchored in the Bay during the trip around the world ordered by Teddy Roosevelt. Daily we went aboard ship for luncheon, and daily Uncle John became seasick.

The next year, Frohman took me away from Uncle John. I missed him. He was gallant and funny. (Although I had begun to have callouses in my cheeks from my biting to keep back laughs on stage.) Still, it was pretty wonderful to be starred in my own play, Love Watches.

Suppose I spare you a recital of all the plays. Still, for reminiscence's sake, there was W. Somerset Maugham's Mrs. Dot, Suzanne, The Runaway, Sir Arthur Wing Pinero's The Mind the Paint Girl, Pinero's The Amazons, Maugham's The Land of Promise, and Caesar's Wife, and Jerry. Remember? Jerry was the one I wore the pajamas in.. Mrs. Dot was the one I lost the slippers in.

I wonder still what became of all those slippers. I kicked one off every night, coast-to-coast, and they were collected in fierce scrambles by college boys. I wonder if some middle-aging family man remembers today what he ever did with Billie Burke's red slipper.

I was earning more than $50,000 a season, a fine fortune in those days, had an estate at Hastings-on-the-Hudson, a Rolls Royce, a nice Packard for my mummy, and went to Europe every summer for my clothes. I would take Mother to a spa, and visit Paris and London to select my clothes for the coming season.

Often on summer evenings I would meet Frohman and James M. Barrie in the *Bois* where we would dine, and then sit sipping ices at a little table, looking at the ladies' legs. It was a game this amazing pair would play, with me as referee.

They would pull their shabby black hats low over their eyes, these two short dry little men, and stare at the curbstone where the girls alighted from the *fiacres*. They could see only their ankles, and the object was to guess by the ankles only whether the girl was a lady, a cocotte, a blonde, a brunette, a show girl, or what. Charles Frohman seldom missed. Poor Barrie. He purred and mumbled and guessed, but when it came to judging women by their ankles, he never got things right.

There was a strange affinity between these paradoxical men. Frohman was not a formally educated person, and he had so little to say. He talked like this: "Barrie—write play—me—Maude Adams." It was the same with Pinero and with Maugham and Haddon Chambers and all the others. They did their best work for Frohman, though how they understood what he wanted is a mystery. It is an odd thing to say, but there was in the hard-crusted Frohman a kind of Peter Pan quality, a pixyish sort of thing, and sublime artistic integrity, which appealed to these literary geniuses. Barrie, I know, lost nearly a million dollars backing Frohman ventures in London.

But when David Belasco was putting on sensational productions merely to make money, Frohman was starring Maude Adams and E. H. Sothern, Pauline Frederick, Ethel Barrymore, John Drew, and presenting plays of great distinction, like Barrie's What Every Woman Knows. Frohman was a strange genius, of whom I shall have more to say.

A Touch of Barrie Whimsey

James Barrie was a Scot, but I recall no Scottish accent at all, only a little purr, and his shy sweetness. One afternoon he brought me home from a walk and as I took off a wrap there was Barrie suddenly behind me, very close.

"May I kiss you?" he whispered.

"Why, yes, of course," I said. I was amazed. I had never been asked before.

So Barrie kissed me, gently and quickly, about an inch from my left ear, a meager little Scotch kiss, then fled in terror. We were always good friends but he never asked me again.

New York shocked me, after London. I did not know that women actually drank whisky, and often too much of it. Besides, I preferred champagne or absinthe frappés. But Frohman was the inventor of the star system. He permitted me to be seen in public very little and wouldn't even let me go to other plays when I was not working for him. Still, you meet some very interesting people in the theater. One was a grand old gentleman—Dr. Samuel Clemens, better known as Mark Twain.

Mark Twain would come to my dressing room often when he was depressed and rub his great shaggy white mane against my red hair. "We redheads have to stick together, Billie," he would say. Another Twain line was, "Truth is the most valuable thing we have, Billie—let us economize it." I always expected him to say something funny, but he never did. He was sad in those years after "Livvy" and his beloved daughter died, after his financial collapse, and after his great artistic powers had gone.

It seems the Frohmans used to play billiards with him at the Players. One evening I overheard them talking about Mark Twain.

"He doesn't win enough, he's unhappy," said Dan Frohman.

"Let's let him take every third game," C. F. suggested. And they did, in spit

COLLIER'S "Madam, would you kindly remove your hat?" GERALD GREEN

There's a thrill in accomplishment

Bonneville Dam

Many people raised their eyebrows two years ago, when they heard that men who were great builders of dams, movers of mountains and builders of ships were about to create a completely new car.

When it came from Willow Run, it startled the conservatives, and it delighted those who rejoiced in abundant roominess and solid riding comfort. It changed the thinking of an industry.

Now—in only two short years, these cars are proud possessions of a quarter million owners, who have driven them over two billion miles on every kind of road. These cars have stood up to what their engineer-designers knew they would do. They have proved their dependability. In style, they are *the most-copied cars in America.*

America fell in love with them on sight. And demand was so great that Kaiser-Frazer had to smash production records time after time. *Cars are now being precision-made faster than one every 45 seconds!*

The new Kaiser for 1949 is *more* than a great achievement in engineering design. It is a great car —*road*-proved, *style*-proved, *value*-proved. Kaiser-Frazer Corporation, Willow Run, Michigan.

THE 1949 KAISER DE LUXE

Why don't you drive a 1949 Kaiser and find out?

of the fact that Mark Twain was meeting them every day in court in a bitterly contested lawsuit.

My contract with Charles Frohman was verbal, never a scrap of paper. I had agreed to work for $500 a week and not to marry for five years. I was perfectly happy about this, though I was not forgetful of my Irish naval officer, and was tempted—a little—by Enrico Caruso. But one day Maxine Elliott came up to Hastings to see me.

Of all the beauties who were important in my life, including Marilyn Miller, Olive Thomas, Lilian Lorraine and all the Ziegfeld Follies choruses—and I mean all of them—Maxine was the loveliest. And she was the only one who did not threaten me. Indeed, she did me a financial favor. She asked me how about my contract with Frohman.

"Why," I said, embarrassed, "there isn't any contract. Frohman doesn't have a contract with Maude Adams, either, or with any of his stars. But he never misses paying me my five hundred a week," I added crisply, very business-like.

"My dear," said Maxine. "You know I work for Lee Shubert. Now, Shubert would be very happy, I know, to pay you fifteen hundred dollars a week, under a long-term contract."

There was a thundering scene when I reported that to C. F. "Spy," he spat out. "Trying to steal you. All right. Fifteen hundred. Plus 10 per cent of gross. Only five hundred cash. Rest in bonds. Investment for you."

Delightful Enrico Caruso

When we took Pinero's The Mind the Paint Girl to Boston I met an extraordinary person named Enrico Caruso. The great tenor was at the top of his form then, both vocally and romantically. He came to the theater every evening he was not singing, and every night there would come hurtling down from his box an enormous bouquet of American Beauty roses, vastly to the amusement of the audience. I finally met him at luncheon.

Immediately after that, he began to come to my suite at the Touraine to fall on his knees and beg me to marry him.

"Leesten, my leetle red mouse," he would plead, "I seeng you the most lovely aria in all music," and he would fill his great lungs and pour forth golden notes in such crescendo that the whole apartment trembled.

We walked often around the bay, where his first concern was to see if his "Mi-mi" was well. He would open his great throat and let the notes soar, then announce smugly, "Ah, my Mi-mi, she is well."

I am afraid I mistreated this wonderful man. I thought he was a great mischievous baby, to be teased. Usually when I had dates with him I brought along a half dozen Harvard boys who took turns being my fiancé. They ate all of Caruso's spaghetti and inhibited his rather overpowering brand of Latin love-making, though their presence hardly ever stopped him from proposing several times an evening. Who knows how it might have turned out!

It was that delightfully written play, Mrs. Dot, which introduced me to Somerset Maugham. Years later, I visited his handsome home in London. Over his mantelpiece was a small picture of me in a beautiful frame.

"Do you know that interesting young woman?" he asked. "I will tell you who she is. That is the woman who gave me this house. We really made quite an extraordinary pile of money out of that play, you know."

Somerset Maugham was a handsome man in 1910, as he is today, for that matter. He is known as an English novelist, but to me he was French, because he was born in Paris, and because of his elegance. He wore swallow tails and striped trousers, piping on his coat, smart gloves, a stick, and a gray top hat. And he had great, beautiful brown eyes. Ah, yes, Mr. Maugham, so you did, and I was a little in love with you, to, sir.

But I owe Somerset Maugham a great deal more than many delightful evenings and three good plays. Somerset Maugham took me to a New Year's party in New York in 1914 that touched off the most extraordinary series of events in my life. I should say, perhaps, that my life started from that evening.

I had given a rather lavish New Year's party for the Forbes-Robertsons, who were sailing for England, and when it was over, Maugham suggested that we look in at the Sixty Club costume ball at the Astor. We enjoyed dancing and it seemed like an idea full of fun.

The Man in Evening Clothes

We made quite an entrance. I came down a grand staircase at just the right moment. Anna Held, strange and dark, foreign-looking and utterly beautiful, turned and stared at me. She had just split with Florenz Ziegfeld, Jr. The eyes of the men in the party even turned away from Gertrude Elliott, who was the prettiest woman there. And at the foot of the steps, not in costume, but slim and tall in fresh evening clothes, stood a man.

He had a Mephistophelean look. His eyebrows curved up in the middle, whimsically. He was very dark and satyrical and proud-looking. Maugham and I swept by and began to dance.

I remember the orchestra. Freddie Zimmerman, a society figure, was marshaling the Paul Joneses. The dark man took me in his arms and began to dance, expertly, smoothly, while I chattered. Perhaps I should have put this in before. I always chatter. He never said a word, but he touched me with his knee, a little signal to turn. I thought this was a wicked thing to do, but I rather liked it.

There was another Paul Jones very soon, and there was my dark man again. And another Paul Jones, and my man again. Without a word.

Someone spoke to him. "Hello, Flo," a girl said. "I thought you went home."

You must believe me. I had never been to the Follies, though by this time Florenz Ziegfeld had such stars as Nora Bayes, Sophie Tucker, Mae Murray, Leon Errol, Ann Pennington, Fannie Brice, Bert Williams and George White all working for him.

I knew about Florenz Ziegfeld, Jr., though. His reputation was most dangerous where women were concerned. I saw Anna Held's great puzzled eyes watching us as we danced. I knew, too, about the affair with Lilian Lorraine, whom Ziegfeld always loved.

Flo Ziegfeld was, shall I put it, *careless* about women. He was as famous for this in New York, I suppose, as he was for his Follies. I had never met him on Broadway, chiefly because Charles Frohman kept me away from him: Frohman despised Ziegfeld as much as Ziegfeld despised Frohman.

As Mark Twain advised me, I shall economize with the truth. I was confused. I was, and I knew it, desperately and foolishly falling in love with this strange man, with whom I felt a sudden strange oneness. It seemed that he had danced me into a new, glimmering world of swirling emotion. Yes, I knew Flo Ziegfeld was dangerous to women, but even if I had known precisely what tortures and frustrations this man would bring me in the next eighteen years—this man with eyes that alternately smoldered or turned to swords' points—I should still have gone right on falling in love.

If by now you've fallen in love with Billie Burke as we have, rejoice with us that the second installment, equally enchanting, follows next week.

They fit! They fit! They fit! They fit! They fit!

MT. ROCK COATS 15 HAND STREET ROCHESTER,

"It's not how I talk,
it's what I say...
They fit!

That's why they feel as good as they look!"

There's something unusual about a goat talking. And plenty unusual about the Mt. Rock coat story he tells. *They Fit. Fit*—smartly, comfortably, amazingly.

They fit because they have extra width from here to there, keeping the lapels flat, smooth, and neat.

They fit because they have extra depth from here to there, making the collars snug, the shoulders smooth.

They fit because they put you in the middle of your coat where you should be and want to be. Like this:

GABARDINE . . . It's always fair weather in this wonderful, wearable fabric. It makes the kind of coat that makes you swagger a bit. Light, warm and always wearable.
Ardsley's exclusive all-wool gabardine, $70—with all-wool zip-in lining, $82.50. Other Mt. Rock Coats are priced at $50 to $125. Send for don herold's book, "This Man Just Had A Fit." Write Dept. C-1.

MT. ROCK COATS

15 HAND ST., ROCHESTER, NEW YORK

FEATURING EXCLUSIVE FABRICS BY *Ardsley, Cerey, Continental and Worumbo*

You wouldn't put in anti-freeze with the drain open

by don herold

You gotta get your car ready first.

Anti-freeze is insurance. You can insure this insurance by PREPARING your car for the anti-freeze.

You should first have your service man tighten hose connections, check thermostat, and clean the cooling system clean as a whistle with NOR'WAY* CLEANER or NOR'WAY QUICK FLUSH to make sure your anti-freeze circulates freely.

Then have him put in NOR'WAY STOP LEAK if there are any signs of leaks to make sure you don't lose your anti-freeze and run the chance of freezing a radiator or motor block.

And you can now give MORE THOUGHT to choice of anti-freeze, itself. CSC offers two excellent kinds: NOR'WAY, an economical type—it takes less than of any other type to protect your radiator against freezing—and PEAK*, a permanent, all-winter type. Both contain an efficient anti-rust.

See a dealer who handles these fine NOR'WAY products, and let him be your cooling system doctor this fall.

Behind this fellow are the resources of Commercial Solvents Corporation, who have developed these products friendly to your car's cooling system and your bank roll.

THE TREE OF HEAVEN

Continued from page 21

but Hugh seemed to understand: he looked at her deeply and shook his head once, as though he could not find words for answering. He did not believe much in words anyway, knowing other ways to convince, and now his arms came round her.

Barbara thought of her friends in Davenport with proud contempt. She had gone far beyond their stingy maxims: Keep a man guessing, never put all your eggs in one basket, never let a man be sure. It was as though—and perhaps they had their reasons—they considered men adversaries to be outwitted, wielding doubt as a weapon against superior strength, turning it like a mirror in the sun to daze and puzzle the opponents.

"God, I love you." He almost groaned the words against her ear and she, opening his jacket to put her arms around his waist, held him close and repeated his words to him. They made this declaration to each other often, always with a mingling of pride, helplessness and wonder at having discovered the power that lived within the hackneyed phrase.

How terrible, how parsimonious and pathetic *not* to put all your eggs in one basket, *not* to let a man be sure, Barbara thought. Instead of guarding equilibrium she had contributed everything she had to achieve this state of marvelous imbalance. She had often heard that no relationship can continue at such a blissful angle of distortion: It must adjust itself or be destroyed. Naturally it would never be destroyed, but Barbara found it equally difficult to believe that it would ever descend to the passive and habitual.

Sometime during this delirious period the tree beyond the window began to obey the season. It burst out suddenly in small stiff cockades at its twig ends which gave it a cramped festival look. Each warm day these cockades grew larger, becoming brushes, plumes, and finally big flat parasols of leaves. They were tender as cambric and when the wind blew, it was like many draperies rustling, as though some large and gentle deity were strolling past the window.

ALL through the summer when Barbara returned from the office and the hell-baked streets, the tree gave an illusion of latitude, of country, of release, all its fronded parasols turning in the hot evening breeze as she and Hugh sat in the window watching it.

"In China, where it comes from, they call that the tree of heaven," Barbara said. "You might guess that it would come from a land where life is poverty-stricken and tenacious."

"And from a philosophical land," Hugh agreed. "Where they know how to make marvels out of next to nothing."

"It doesn't take so much to make a marvel. Two people together, that's all it takes," said Barbara, who did not mind being sentimental.

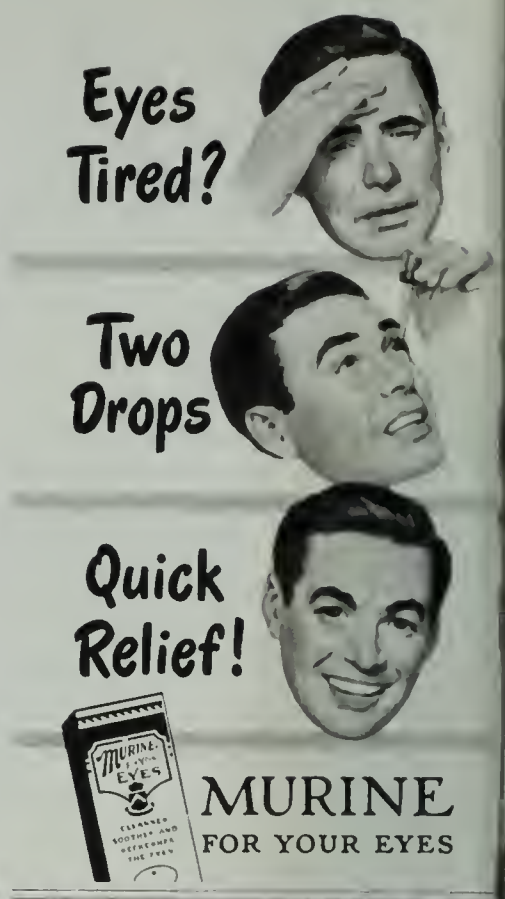
All through that summer they went to the country on Sundays. They lay on many beaches and walked through many fields and woods, often turning to each other suddenly, kissing, pressed together, murmuring, all alive to each other, every sheltered or secluded spot that they came upon rousing in them simultaneously the need to demonstrate their love. Barbara would always remember everything about that summer of intense heat and intense love, with its shifting backgrounds of sea and meadows and shaded rooms and the green tree in the window.

In the autumn she went home for a week, begrudging every moment and resenting her parents' lien upon her time. She viewed them and her friends from a great distance, seeing them smaller than life-size and trivial in their interests and romances. She was vague yet haughty with them, engrossed in love, and often they found her irritating. It was a relief to everyone when she returned to the city.

In the autumn one remembered that the city was an island. The wind that crossed it smelled often of docks and rank water, the air seemed vigorous, still salted and stirred by its recent contact with the sea, and overhead, sometimes, one saw gulls flying. The season which in the country was a stately and elaborate withdrawal into silence and sleep was, in the city, a time of gathering excitement; a new page was turning, and promises, or at least hints, were in the air for everyone. Barbara and Hugh came into each other's arms as though they had been separated by years and by continents.

THE second winter was different from the first. Barbara got a promotion and had to work harder. Hugh, too, seemed to be busier than before. Sometimes two or three days went by without their seeing each other, but they talked often on the telephone and sometimes wrote notes. Yes, it was different—Christmas passed, the heart of winter was upon them again and spring far off. What had happened to all the hints and promises of fall?

Barbara hurried to work each morning as she had a year ago, and if she leaped the curbs less often, still she was happy. She supposed that her relationship was "settling" at last; and now it was possible to understand and even to accept the term— She knew him better now, far better than she had. She had learned the things that it was well to know about a future husband: that he was sometimes rather stuffy about being teased, that it pained him to lose an argument, that it was wiser not to call him too often at the office, and better when he called her not to let him know how anxious she had been to hear from him.



These characteristics, since they were Hugh's, seemed to her more endearing than not and she learned how to deal with them skillfully, and with tenderness. Little stratagems, like little strands of smoke, crept over a condition which had seemed, at least, to be clear of any reservation. What she did not realize, or would not admit, was that where strategy exists there must, somewhere, be fear—

That was a long harsh winter. February seemed as long as seven Februaries. The sky was dense and swollen, and great bitter winds poured through the streets. The ailanthus tree quaked and rattled beyond the window. Barbara could hear it out there at night when she was alone, working or trying to read. She was alone rather often, and when Hugh was with her he seemed—only now and then—remote, a little different in some subtle way. She struggled silently against asking the important question, and eventually asked it.

"You seem changed. Is anything the matter?"

He looked at her rather coldly for a moment. Then he laughed. "Nothing's the matter, silly girl. I'm tired, I guess. I've got a ton of work on my neck." He stroked her forehead with the warm palm of his hand, but she was only partly reassured. What had been an unconscious fear had now crept out of its hiding place to become a conscious nagging little doubt.

March carried not one hint of spring and April was mean. Oh, if the summer would come, Barbara used to think; oh, if the days would only be warm and soft again, all the hard knots of anxiety, the

cold prodding knuckles, would be melted away— Certain years, certain periods of our lives that were intensely felt, are preserved, after a passage of time, as distilled essences in the memory. From the great amorphous litter of remembered words, visions and sensations, the pure essence of our responses is extracted and the flavor retained forever. By these flavors we know now that such a time was more bitter than we thought, and that another one was sweet or strange that seemed prosaic in the living.

Barbara thought of the summer that had ended months ago and found that it had been distilled: It emerged in her recollection glamorous, glittering, tender and exciting; sweeter, painfully the sweetest, of all things she remembered— Oh, let the summer come, she thought, let the warm days begin! It must, it must be lived again.

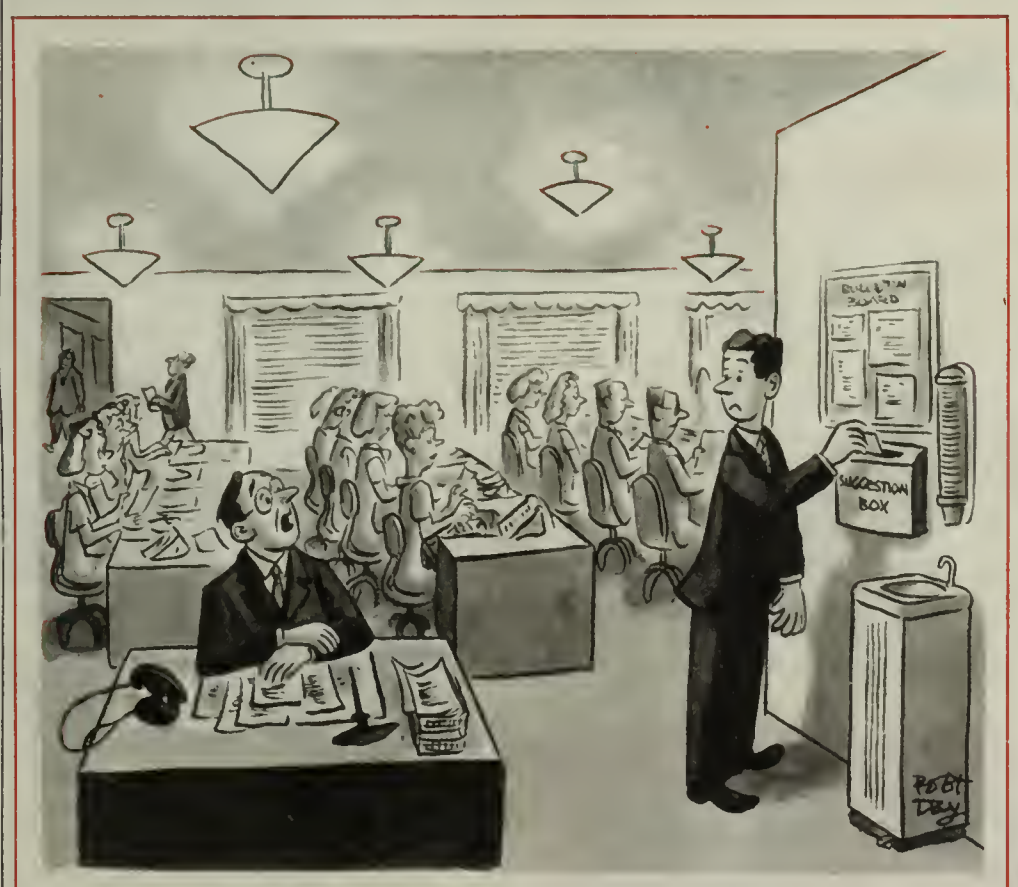
But when May came at last, mild and beautiful, she was unable to take pleasure in it. During a period of weeks the little doubt had grown immense, a bottle-genie shadowing the world, and she could not escape this shadow anywhere except in Hugh's presence, and often not there.

She was fatigued by the debate, the argument, that was taking place inside her all day long. She was herself the argument, being alternately now the negative and now the affirmative answer to the same unvarying question. When she was able to exist as the affirmative answer she was wild, reckless, feverish with joy; and when she became the negative answer she was a stooped and haunted creature: she could not stand up straight and her breastbone hurt her. What would happen to all this love of hers? she wondered. There was love in all her veins; she was full of the wine of love. If it could not be poured, if he no longer wanted it, it must ferment inside of her, it must spoil, turning to vinegar, until she was corroded and destroyed by its imprisoned action.

In the most utter submission of her life she turned her head and spoke against his cheek. "I love you. I would die without you."

He, after an instant, a tiny pause, pressed her shoulder and said, "Do you think I don't love you?"

That satisfied her for the moment, yet later when she considered it, she knew that a year ago, even three months ago, he never would have answered such a statement with a question. The genie's shadow fell across the day, and the painful tedious argument began again.



But it had never really been an argument after all: From the very first whisper of doubt the outcome had been assured. The incorruptible appraisal system at the heart of her perceptions—which was so often ignored—had pointed to this for many weeks. Yet still, though knowing, she could not accept it as the truth. Until he said the words, actually told her that he was finished, through with loving her, she must be harnessed to a persistent and ungainly hope that sprang up clumsily at the wrong moments, destroying things, irritating him and driving him into further silence.

The tree was now in full leaf. She noticed it one evening when she came home from work, leaning her forehead against the glass which was not as cool as she had expected. The new leaves brushed and rustled softly in the air. How dirty they were already! On their green surfaces there was a dust of glinting particles and she saw for the first time that on one branch, enclosing the terminal twigs, there was something that looked like a veil of soiled tulle. Inside of it, among the damaged leaves, a languid populace was moving.

Barbara drew back from the window half repelled, half gratified. Where formerly she had found rewards she now found maledictions, and these seemed to her to be well-earned and justified. If she was incapable of holding love, then it was right that ugliness should be ignited wherever her eye fell, breaking forth from all things with the sly vivacity of fire—

THE next time she looked at the tree, days later, its corruption was far advanced. The skeleton leaves were draped in musty shrouds, and new shrouds were in the weaving. Large and lusty, the ugly hairy denizens strolled and devoured. She was shocked into momentary action: it seemed outrageous to let the damage go on. But the landlady was away on a visit, the Park Department would not attend to a tree on private property, the florist had no one to send, and her zeal went down in apathy.

She had not heard from Hugh in two weeks. Each evening she and her telephone were involved in a silent battle of wills. Twice she lost, but when she dialed his number there was no answer—She hated the indomitable jetty instru-

ment, and when she sprang to answer its ringing and heard only the voices of her friends she hated them as well. She had many enemies besides the telephone: all couples holding hands, all people kissing in the warm evenings, the postman who brought only the wrong letters, her own reflection in any mirror, and every caterpillar in the ailanthus tree.

Only of Hugh she could not make an enemy. In spite of his unexplained neglect and change of heart, in spite of the craven withdrawal into silence where there should have been explanation or honest admission, in spite of all this which she recognized perfectly well, she was unable to think of him as an enemy. Convinced that the failure was more than half her own, she did not think: What did I do that was wrong? She thought: What am I that is wrong? She was torn, committed, humbled past repair; her emotions were a howling wilderness of longing and self-reproach.

The third time she succumbed to the telephone's domination she found him at home.

"Why, hello, Barbara," he said. He sounded surprised. Why?

"I'd like to see you, Hugh."

"Why, sure. Of course. Tomorrow sometime?" How false and uncomfortable he sounded.

"All right, tomorrow. About five fifteen? Here?"

"Perfect. I'll be there."

"Goodby, Hugh."

"Goodby, darling."

SHE was trembling when she put down the receiver. Ah, what an arid little interchange, and yet in spite of everything the large awkward hope lumbered to its feet like a herd of cattle, trampling and lowing. It forced her off her course to such an extent that she bought a new dress for the occasion, bought roses for the apartment and tilted the blinds to hide from view the tattered tree beyond the window.

And all of it, of course, was done in vain. Their encounter was more miserable than she could have foreseen. Hugh was gay, bright, full of chat: Keep the whole thing light was his idea. Yet he looked troubled, almost scared, glanced often at his watch and seldom at her and there was nothing light about him. He was no one she had seen before. Barbara's voice sounded strained to her own ears. Now that he was here, acting like this, she could not speak to him as she had wished; she fell in with his idea, making conversation without value, and they were like two people in a play, amateurs, poorly organized and cruelly self-conscious.

"I've got to go, I'm sorry, Barbara. I have an appointment in twenty minutes at Ninety-second Street."

"Oh, I'm sorry."

"I forgot all about it when I talked to you—"

"Oh, that's perfectly all right." His mouth felt like cardboard as she smiled. This was how things ended; even for her.

From habit she walked down the stairs with him and out to the front steps. Now that he was all but free, he could afford to linger for a moment. He looked up at the tree.

"My God! What's happened to it?"

"Webworms. They started days ago, weeks ago. Horrible, isn't it?"

"But can't something be done?"

"The landlady's still away. I tried everyone, everything—" His concern, his participation in her mood led her on an impulse. She put her arms around him, close, in the bright outdoor daylight. "I tried everything. Oh, Hugh. Hugh—"

Within her arms he stood motionless, polite, but with his own arms at his sides. In his stillness she could sense the urgency of flight, and his heartbeat was like the walking of a stranger, someone she could never know; who, if she confronted him, would fail even to see her. She dropped her arms.

"All right, you're released," she said bitterly. "You can go now. But why couldn't you say the words? You used to love me and now you don't. Why couldn't you say it? It would have been better."

A sudden compunction came over him: it was obvious that he wished to be remembered in the light of grace.

"Barbara, Barbara, I'm so sorry. Don't be hurt. Let me try to tell you—it's not in any way your fault, it's mine entirely, it's just that I—that things don't seem to be—" But it was no use. He would not bear the truth. His glance fell from her face. "What are we making a scene about? I'll be calling you when things loosen up, Barbara. It will be all right then, really it will."

"Never mind," said Barbara, and went into the house.

She turned once, looking back through the grillwork of the front door. If he should still be there, watching her—but he was not there. Of course not. Even now he would be halfway up the street, sweating, no doubt, mopping his brow, but free again, free as air.

She went back into the dusky liv

"Your speech sounds very good, dear, but couldn't you say 'Wallace' with more of a hiss?"

room, seeing his glass and hers, the untouched dish of *canapés*, the unbearable roses in the vases.

When she went to open the blinds to the hot late-afternoon sunshine something tickled her neck. Abstractly she put her hand up, touching something tiny, furred, *alive!* Frantic, panic-stricken, she plucked it off and flung it to the floor. The caterpillar lay there writhing, adjusted itself, searching out directions with its weaving head, and started to riffle away along the floor.

"No, you will not," said Barbara, and with one fierce stamp of her foot all the components of a striving, demanding, goal-ridden life were crushed to a slimy stain of green, and she burst into tears.

SHE now found out what it was like to live from hour to hour. Carefully, with concentration and caution, she built each hour upon the one before it, like somebody constructing an edifice of matchsticks; but if she made a hasty move, looked away, even sighed, down would come the whole thing, and she would have to start all over again. At first it collapsed several times each day, and at night it was all over the place—she did not see how she would ever get it together again—and in the morning she was filled with pain and boredom at the task ahead of her. But as time went on it stayed together pretty well, though she did not dare subject it to the mildest test.

The summer was burning hot. She worked harder and longer than she had ever done before, staving off the bad time when she would have to go back to the apartment. As she came down her street those bright, brassy evenings, she could see the tree in front of her house leaning out over the iron fence, wrecked and corrupted. Hung with tattered snares, nearly destitute of leaves, it crackled, it stirred visibly with the movements of its despoilers.

At night when she lay in the living room—her bedroom was stifling—she could actually hear them feeding out there, a tiny crepitating sound of industrious and ceaseless greed. In the morning the pavement beneath the tree was filmed with pellets of greenish-black excrement— But when they had fed for several weeks the first caterpillars began to depart from the tree; small rippling dabs of fur that escaped death under heel or wheel climbed the stone walls, even invaded the houses. Barbara plucked them from the picture frames, from the curtains, and one hot night she found one strolling across her pillow—If I get through this summer I can get through anything, she thought.

Love died like the nerve of a tooth, outraged and haranguing in its prison. It did not wish to die but clung tenaciously to its life for a long time, and the pain was so intense that one felt that if one could get to the heart of it, concentrate on it, examine it unsparingly in the instant of its happening, one might possibly be able to understand it, and then it would change from pain to something else.

She was awakened one morning by a sound: curious, rural, staccato. A sound of finality, therefore melancholy. What does it remind me of? Barbara wondered, lying in her bed— ("Oh, my orchard!—my sweet, beautiful orchard!" Lyubov says. And then in a few moments, the stage is deserted and there is the dull sound of an ax)— Remembering, Barbara sprang from her bed and ran to the window.

The landlady in a long faded house coat was standing on the front stoop calling commands to a colored man. "Look out, don't let it fall this way!" she cried. "Don't let it break the windows. Now wait! You better wait a minute till that lady gets past."

"Oh, what are you doing?" cried Barbara, leaning out of the window. It was easy enough to see. Already there was a deep blanched bite in the tree trunk.

The landlady turned her pale-gray face up to Barbara. "Look at the thing! Just filthy. That's the first thing I said when I got home last night: I'm not going to put up with these *worms* ever again, I said. Go on, Harold, get it done and out of the way before people start going to work."

Clop. Clop. Clop. The tree trembled mortally and the caterpillars flew from it like heavy drops. Then it broke, hesitated in space, and fell with great despair and grace across the iron fence and pavement beyond.

"Chop it up now, Harold, chop it up," neighed the landlady eagerly. "If we store it in the cellar it'll dry out; make good firewood next winter. Hurry up, Harold, get it out of the way."

Barbara drew her head in.

Oh, how different her room was now! How queerly light! It showed up the soot that had clouded the ceiling corners, and altered the color of the walls. It looked so strange, not like the same place at all.

I'll have to get it painted, Barbara thought. I'll make it another color, yellow maybe, or maybe white. I'll change the furniture around too, and put up other pictures.

"It will be a different place," she said aloud. "All different, all new, completely changed."

She caught sight of her face in the mirror and it was the same tiresome melancholy face that it had been for months; nevertheless as she looked at it she repeated her words: "All different, all new, all changed."

Perhaps after a while there would be some truth in them. For the first time she was willing to believe so.

Headlines in Footwear

Men shouldn't buy shoes haphazardly. They're too important a part of the wardrobe. There should be some care and thought devoted to the selection of socks as well. So—Collier's gives you an "in" on the season's newest footwear styles. The shoes are all smart, practical and comfortable. So are the socks, selected here to go with them

For Evening Wear

Patent leather is the proper favorite for all occasions when evening clothes are worn. The dress Oxford (shown horizontally) is equally suitable with dinner jackets or tailcoats. There has been a slight but noticeable return to the patent-leather pump (shown vertically) and more than a few men prefer the subdued black kid, which blends well with the grosgrain lapels of many dinner coats. The correct and luxurious hose, for all types of evening wear, are the plain black all-nylon fine rib as illustrated

For Town Wear

At the left, above, the traditional and conventional black calf wing-tip shoe for dress-up or formal types of business wear. Next, the smart, leather-soled brown suède with medallion toecap, appropriate for town wear with casual clothing. And at the right, the durable wing-tip brogue in cordo-calf for all-occasion and all-weather wear. Proper hose for this group of shoes include, in the same order—nylon-ribbed hose with embroidered clock; a genuine 6-by-3 ribbed anklet, of wool and cotton; and a links-and-links English-style ribbed anklet, of wool and cotton

DRAWINGS BY ALVIN PIMSLER

For Sportswear

From the top down, the monk-front shoe which carried over its popularity from military to civilian wear. Next, a plain-toe blucher, liked equally for its comfort and neat appearance. At the bottom, the universally favored moccasin, or so-called "loafer." The one shown, with a strap, is dressy enough for town wear with informal clothes. The hose, left to right, include the all-wool, hand-framed Canadian Argyle, treated to resist shrinkage; a hand-knitted pure wool Argyle design; and an all-wool links-and-links bold basket effect, with nylon-reinforced toe and heel

For Country Wear

There is almost no limit to the wide variety of shoes now available for country or leisure wear. They provide the utmost in comfort and the ultimate in styles. They range all the way from the most casual zephyr weights, which have come out of California, to the sturdy knockabout brogues which will withstand the roughest treatment. One example is the crepe-soled brown reverse calf, with three-eyelet strap and buckle. It's smart, stalwart and comfortable as an old glove even on the first wearing. A fine choice of hose, for this type of shoe, is the all-wool, hand-framed, full-fashioned cable-stitch sock as shown. It is imported in a wide range of dark and pastel shades

"Thank goodness, we can afford to live here till our house is rebuilt!"

THIS FAMILY *MIGHT* HAVE HAD TO CAMP OUT!

You see, a fire took the roof off their house, and they had to find temporary quarters *in a hurry*. Expenses here are going to run far above normal...for rent, meals, laundry, service, etc.

Fortunately, when they bought insurance to cover their house and its contents, they included Hartford's ADDITIONAL LIVING EXPENSE INSURANCE. Now it will pay these extra living costs until their home can be rebuilt.

Make sure *you'll* be covered if a fire or windstorm wrecks your house! Hartford's ADDITIONAL LIVING EXPENSE INSURANCE can be written as a separate policy or by endorsement to your fire insurance contract. And you don't need to wait till your present policy expires. Have your Hartford agent or your broker take care of it right now!

UNLUCKY NUMBER. It's the staggering number of Americans disabled by auto accidents last year...32,000 were killed! In the name of humanity—and your own safety—drive carefully!

DEATH HAD STRANGE HANDS

Continued from page 15

official business. But he had a week's leave before the impending transfer to Paris."

"When was he last seen?"

"An arabana driver remembers taking him to the neighborhood of Dr. Fadan's house Monday evening. He had often driven him there." Chafik twisted his *sidarah*, the black forage cap worn by civilian Iraquis, then frowned at his hands. "The hotel switchboard operator remembers that a lady telephoned him earlier. She had a foreign accent and was distressed."

"It was probably Naomi Fadan's answer to his letter." Ellsworth picked up Lebrun's letters and looked at the attached translations. "... Do not choose death," he quoted. "That's the devil of a thing to write."

"There can be several interpretations, sir—"

"I can see only one." The Chief Inspector's voice was hard. "The woman's constant refusal unbalanced him. I'm surprised he didn't kill her Monday. Was there a quarrel? What does the servant say?"

"He is very loyal to Madame, sir. But after persuasion"— Chafik coughed discreetly— "he informed me his mistress sent him on an errand and told him not to hurry back. Therefore he did not see Lebrun."

Ellsworth said, "The husband was away, too. But obviously Lebrun went to the house in answer to the telephone call and received a final 'No.' He went off somewhere to brood. Came back last night—"

"Sir?"

"Damn these crimes of passion! I always feel sympathy for the poor, ruddy murderer." The Chief Inspector thumbed tobacco into a pipe with a large bowl. "Lebrun was hanging around when Fadan went to the hospital. Went in and strangled the woman, as he had threatened in his letter."

Smoke from the Chief Inspector's pipe drifted across the desk, and Chafik daintily moved his chair. "The letter, like the fingerprints, disturbs me," he said in his precise English. "I am not happy."

"It's a clear case. We know Lebrun's motive, and the fingerprints prove his guilt."

"Fingerprints confuse me—"

"Dammit, Chafik! Bertillon's system is infallible—"

"Only God is infallible." The little man's dignity silenced the Chief Inspector. "But I do not doubt Bertillon. The fingerprints were those of Lebrun. We have both the right and left thumbs. The small finger of the right hand, and two other fingers of the left. All were exceptionally clear. And yet—"

Chafik's voice became thin. He spoke now, as if thoughts were escaping on the wings of words.

"Why were both hands smeared by lipstick? Was not one hand enough to silence the lady's cries? And why the thumbprint?"

"You mean the one on the cheek?"

"It was as sharp as if rolled on. A signature of death. So the kings of Babylon put their triumphant seal to a warrant of execution. So does a flourish of drums conclude the arrogance of martial music." The little man heard himself and rose in confusion.

Ellsworth looked at him with amusement. "Don't weave a fowler's net and get yourself snared," he said. "The little mysteries will be cleared up when we catch Lebrun."

"I do not like mysteries, sir. There should be no doubt in one's mind when one touches the shoulder of the accused man."

CHAFIK put his hand to his mouth and sucked the blister raised by the cigarette burn in Dr. Fadan's study. It was on the point of bursting, and irritation made him forget his manners and his usual salaams when he left the Chief Inspector's office.

He stood for some time outside the door looking for a way out of the labyrinth of his mind.

At last he announced conversationally to the empty corridor, "I am very foolish. Lebrun strangled Naomi Fadan in an excess of passion. It is not an unusual murder—"

Suddenly he was aware of physical relief. The blister on his forefinger had burst. He examined it with satisfaction but was disturbed by the untidiness of the dangling fragment of skin. Carefully, he cut it away with the folding scissors in his pocket manicure.

And suddenly, a monstrous patter took shape. He looked at the injured finger, at the piece of skin, and ran down the corridor to his room.

He said breathlessly to Sergeant A

"The Navy was going to use it for launching purposes"

Westminsters

...THE SOCKS THAT WEAR

They're All-American Favorites... The Westminster line-up for Fall, ready now at leading stores. Westminster brings you distinctive new versions of your favorite patterns—Argyles, duo-tone and solid ribs, stripes and clocks—in SHRINKPROOF wool, finest lisle, rayon and nylon mixtures. And this you can bet on—every pair of Westminster Socks will wear and wear *and wear* because they're knit of tested, top-quality yarn, with extra-strong reinforcement at toe, heel, foot and top.

Westminster

dullah, "The fires of Hell have lighted the darkness!" Taking the telephone, he dialed Dr. Fadan's number and spoke with the servant, then cradled the instrument. "Only the dead wife is there," he said. "The doctor is at Hinadi. He rides horses."

The tall sergeant made a soothing gesture. "He seeks relaxation, sir—"

"I can never relax," Inspector Chafik said bitterly. He held out his hands. The fragment of skin from the blister lay in the right palm. There was a crimson patch on the left forefinger. "What do you see, Abdullah?" he asked.

"Sir, I observe you have injured your finger. If you will permit me to apply a bandage—"

"The hurt is within me, Abdullah. Let us go to Hinadi."

BELOW the military barracks at Hinadi, a suburb of Baghdad, was an agricultural district irrigated by a loop of the Tigris. There were no big houses; only the settlements of the *fellahin*, mud hovels roofed with flattened gasoline cans. Beyond, the land merged with the wilderness of gray sand surrounding the city.

At the edge of the desert, and shaded by a few ragged date palms, were Dr. Fadan's stables. The approach was a narrow road ending in a high wall. The gate was open, and Inspector Chafik left his car and picked a dainty path across the yard.

A hut adjoined the stable building. A middle-aged man, whose coarse gown was molded by the wind to his sturdy body, stood on the flat roof of the hut, intently watching something in the distance. He turned when Chafik climbed the ladder and joined him.

The man said, "The master rides. He is out there." He pointed with a brown finger at a cloud of dust which rose sluggishly on the horizon. "Satan rides Satan," added the groom, and spat.

"You speak without respect," Chafik said sharply. "Was that why your master discharged you?"

The man gave a sullen look. "There is no justice," he muttered. "He sent me away for nothing. I, Hassan, who served him faithfully for many years. The Bedouin dog he took in my place—"

"You saw the new groom?"

"As a shrouded corpse carried to the grave." Hassan flung out his arm in the direction of the dust cloud. "Look!" he shouted.

The rider had turned and was streaking across the flats to the stables. The horse, unusually large for an Arab, pulled viciously against the snaffle. The powerful legs had the drive of pistons as the brute came into the yard at full gallop.

Hassan said, "God the Merciful! God the loving-kind—"

The frail man in the saddle twisted the reins with a giant's strength, turned the maddened horse, forced it to its haunches in the middle of the yard. When he let it rise, shivering but quiet, he struck it between the ears with clenched fist, and shouted, "Know your master, you devil!"

Chafik followed the groom down the ladder and said quietly to Fadan, "The hashish eater who flies with the eagles today crawls with the worms tomorrow."

The doctor looked down and his flush of triumph slowly faded. He said, "What?" in a distant voice, and dismounted, throwing the reins to Hassan. For a moment he covered his eyes and then turned wearily to the Inspector. "What brings you here? Has Lebrun been found?" he asked.

"I have come for information."

Chafik gestured toward the hut. They entered the single room, furnished with a broken chair, a native bed, a few straw mats.

Dr. Fadan said, "I have already given you all possible information."

"I wish to know more about the groom who died."

"The groom? As I told you, he was an old man who had a heart ailment. His death was from natural causes and I issued the certificate accordingly. There is nothing to add."

Inspector Chafik broke the seal of a fresh packet of Ghazi cigarettes, selected one for the doctor, offered it with a bow. "Who were the corpse washers?" he asked.

"The corpse washers?"

"We of the Moslem faith bury our dead with minimum ritual. But the body is cleansed for the earth's embrace. Who washed and shrouded your groom?"

Fadan limped out of the light of the doorway before he answered, "I did it myself. I was obliged to stay here because of the horses, so I usefully employed my time preparing the poor old man. He had no relations or friends in Baghdad." His voice became shrill, complaining. "But you ask peculiar questions—"

"I ask you another. Where were you when Madame telephoned Lebrun at the Semiramis Hotel on Monday evening?"

"I told you I was here—"

Chafik said, "The groom was the witness and the groom is dead. It would have been possible to return secretly to the house and overhear the conversation. And I remember the seclusion of the driveway to your house. How well screened it is by trees."

Fadan put his back to the roughcast wall. His hands were in his pockets and his dark eyes were fixed, staring. He said, "Are you suggesting I waylaid my wife's lover when he called on her Monday night?"

"It is you who say he called on her," Chafik said in a soft voice.

"Do you think I killed him? Was it his ghost that came back last night and strangled Naomi? Have you forgotten the fingerprints?"

Chafik said, "It would disturb my excellent assistant, Corporal Yacoub, if I asked him to fingerprint a ghost. But he is very successful with corpses—"

Fadan whispered, "I hear you."

"Sometimes," continued the Inspector, "we take from the river a body so decomposed that there are technical reasons why identifying fingerprints cannot be taken in the usual way. Yacoub applies science." Chafik drew at his cigarette. "Yacoub removes the skin from the finger tips and fastens it to his own with a quick-drying cement. He then rolls not his own prints but those of the dead person."

Fadan whispered again, "I hear you."

"The subject is ghoulish. It did not enter my mind until a blister burst on my finger. Don't you think, Doctor, that your wife met death by very strange hands? Am I not justified in exhuming the remains of the poor old friendless Bedouin who died here of heart failure?"

The man against the wall moved suddenly. His hand, weighted with an automatic pistol, slipped from his pocket and swung upward.

"I confess to your ears because your tongue will soon be silent," Dr. Fadan said. There was no anger in his voice, only tiredness. "I struck down my wife's lover in the driveway Monday night and brought the body here in my car. You have correctly summarized what followed. The guilty were justly punished."

Chafik looked steadily at the muzzle of the gun, at the finger crooked on the trigger. He said, "Before I make my salaams to the Recording Angel permit me to say you do not know yourself. The man who rides a Satan on four legs and shouts with the joy of his victory, does so to conquer his own physical inferiority. Your mind, like your leg, is crippled, Dr. Fadan. It was this complex, not justice, which drove you to double murder."

He saw the trigger finger tighten, the staring eyes dilate. Involuntarily he raised the puny shield of his hand.

CHAFIK was talking rapidly now. "And it was so unnecessary," he said. "Naomi was always faithful to you. She refused Lebrun's attentions. She rejected him as lover—"

"You lie!" Dr. Fadan said violently.

"My soul may soon stand before God. Can I lie now?" The little man watched the sweat stream down the quivering face of the murderer. "I could pity you if you had not planned so devilishly. You discharged the groom so you could install the body of Lebrun as groom. You arranged the operation as an alibi reasoning correctly that a man who had just given life would not be suspected of death. My pity is for the sick who will be denied your healing hands which turned to murder."

"Faithful--" Fadan whispered.

"Lebrun's letters prove it," Chafik said.

He saw the gun waver. He saw the tortured eyes darken with horror. And the Inspector turned slowly and walked to the door. He could hear the horse neighing in the stables, and the clatter of Hassan's bucket.

"Do you remember Othello?" he said over his shoulder, and quoted quietly in English:

"'I kiss'd thee ere I kill'd thee: no way but this,
Killing myself, to die upon a kiss.'"

Inspector Chafik went from the darkroom into the sunlit yard. He put his hands behind his back and stood watching a kite hawk which hovered on the wind with ragged wings. The immense silent desert, arched by cloudless sky, conjured eternity.

When the shot came he turned and looked with compassion at the body fallen in the doorway. "May I be forgiven but sometimes it is better this way," he said.

THE END

"Yes, it is marvelous; but of course I don't understand it at all. . . . I've never even understood the telephone" JOHN RUGE

OF MICE AND MOLLY

Continued from page 11

one would have guessed that he was a naturalist.

He had already published three books —somewhat the same sort of thing that Audubon turned out—and was slowly working his way through the animal kingdom.

So far he had written Our Little Brothers in the Air; Our Little Furry Friends; and Our Friends, the Wasps. All good, solid stuff.

During his stay at the Inn he hoped to complete the fourth book in this series, Making Friends with the Mollusks.

At the same moment that Bill stepped into the lobby of the Sea View Inn, Gwendolyn Marsh raised her hand to swat a mosquito. Few girls were better equipped to do so. A practiced athlete, Gwendolyn had a keen eye and a smooth forehand that had so far kept her remarkably free from mosquito bites.

Using a modification of her cannonball service, pivoting at the hips and keeping her eye on the mosquito, Gwendolyn started the down stroke.

AT THAT moment Bill dropped two suitcases, two tennis rackets and a bag of golf clubs, stepped forward and gently grasped her wrist.

"Now, now," said Bill. "Now, now, now, now."

Gwendolyn stared at him, transfixed. "What the devil do you mean, 'Now, now, now, now, now'?" she demanded, outraged.

"As a naturalist," said Bill, quietly, "I cannot stand by and see this tiny life destroyed."

"Oh, you can't, can't you?" said Gwendolyn.

"No," said Bill, "I can't. A mosquito is one of God's creatures. Has as much right to live as you or I."

Gwendolyn was about to remark that this was certainly true in Bill's case, when Bill smiled. He has a nice smile and it softened Gwendolyn.

"But he's biting me," Gwendolyn pointed out meekly.

"She," corrected Bill. "The males don't bite."

"This one," said Gwendolyn coldly, "thinks he's a female and is biting me anyhow."

"You can prevent her from doing so," Bill said hastily, drawing on his extensive lore of nature lore, "by holding your breath. This causes your pores to close tightly around her schnozzle, or proboscis, rendering her helpless. In addition, she is held prisoner, unable to escape until you permit it by breathing again."

Fascinated by this scientific information, Gwendolyn drew a long breath and held it. Just as she was turning blue in the face the mosquito staggered off heavily, barely able to fly, with the biggest load a mosquito ever took aboard.

"And I hope it chokes him," said Gwendolyn. . . .

From this simple beginning, romance burgeoned and blossomed. Both Gwendolyn and Bill were excellent athletes. Though of slighter build, Gwendolyn had almost as many muscles as Bill. At golf, tennis or swimming they were evenly matched.

There is a strong spiritual bond between a man and a girl whose backhands consistently nick the base line. Prior to Bill's arrival, Gwendolyn had been playing tennis with one of the boarders, an elderly gentleman who played very poorly but overcame this handicap by killing Gwendolyn's good shots out, and there was an unquestioned improvement.

When he was not with Gwendolyn, Bill devoted himself to his work, taking long walks along the shore, and either pur-

chasing live bait and giving it its freedom or hanging from a rowboat with his head under water while he made observations of marine life.

Meanwhile, life at Sea View Inn underwent a remarkable change. Such was the force of Bill's personality that old boarders were seen walking slowly, heads bent, to avoid stepping on ants. Plates of cream were set out for cats. And not a few of the more social-minded boarders found themselves nodding pleasantly to horses.

This dreamy state extended even to Molly, our landlady's beautiful daughter. A warmhearted girl, Molly was naturally kind to animals. But there were several odd incidents which I attributed directly to Bill's hypnotic influence.

She was, for instance, extremely proud of her kitchen garden. Vegetables, under Molly's capable hand, flourished until they well nigh resembled the pictures on the seed envelopes.

I happened to be present when, standing among her precious tomato plants, she called Bill out of the house.

"Bill," she fluted. "Come see the perfectly darling little cutworm."

Naturally, I was stunned. The relationship between Molly and cutworms had been, heretofore, strictly that of squasher and squashee.

As Bill came into the garden, he was, of course, concentrating on cutworms. Naturalists are trained observers, and when a trained observer is asked to look at a cutworm, he looks at a cutworm. He does not—as Bill did not—notice whether a girl has golden brown hair—as Molly had—or deep, sea-blue eyes. Like all scientists these days, Bill was a specialist. Good on bugs. Only fair on girls.

"Where?" he said, looking around for the cutworm.

"Right there," said Molly, pointing. "See? He's cutting through the stalk of this tomato plant, just like a tiny woodsman. Soon it will be lying on the ground, dead. Like those two other plants."

"And you don't mind?"

"Mind?" Molly smiled sweetly. "I only wish I could help him somehow. It must be very exhausting work for such a small cutworm."

ODDLY enough, I did not at once realize that Molly was in love with Bill. I suspected it the following morning, however, when I caught her in the kitchen mashing the lumps out of his oatmeal with the potato masher. Also, as I sat next to him at the breakfast table, I noticed that his toast had butter all the way out to the edges, while my own had the customary smear in the center.

As an old friend I confronted Molly with this evidence, and she gloomily admitted that Bill had captured her heart. However, according to Molly, Bill gave her about the same amount of attention that he would give a grubby little man selling insect repellent.

"Practically none," said Molly plaintively. "He doesn't even notice me."

"Nonsense," I said. "Of course he does."

"No, he doesn't either," said Molly sadly. "Then, of course, there's Gwendolyn."

"Prut," I said. "What about Gwendolyn?"

"Well, I'm not clever or sophisticated like Gwendolyn. And I'm no good at golf or swimming," she said in a low voice. "Or tennis."

"Mere accomplishments," I said cheerfully. "A man like Bill looks for something more than good passing shots in a wife. The Australian crawl," I said, "isn't in it with a sweet, lovely nature."

Privately, however, I was forced to admit that a love affair in which one party was unaware of the existence of the other

I Wear False Teeth

yet my mouth feels fresh, clean and cool

No "DENTURE BREATH" for me*

*"I know that dental plates that feel hot and sticky are a warning sign . . . so I soak my plate in Polident to avoid Denture Breath."

Mrs. C. W. A., Dayton, Ohio

WHEN plates taste bad—feel hot and heavy in your mouth, watch out for "Denture Breath", the oral disturbance that comes from improper cleansing. False teeth need the care of a special denture cleanser —POLIDENT. Safe, easy, quick, Polident leaves your plates feeling clean, cool and fresh. No fear of offensive "Denture Breath".

And remember, Polident keeps your false teeth more natural looking—free from offensive odor, too. For a smile that sparkles, for a mouth that feels cool, clean and fresh—soak your plates in Polident every day.

Polident comes in two sizes—regular and large economy size—available at all drugstores. It costs only about a cent a day to use, so get a can of Polident tomorrow, sure.

NO BRUSHING

Soak plate or bridge daily—fifteen minutes or more—in a fresh, cleansing solution of Polident and water.

party was bound to move slowly. I thought a moment.

"Tell you what," I said, struck by an idea, "you might gain his love by extending yourself to be even kinder to animals. Start a Sunday Breakfast Club for Centipedes, or something of that sort."

She shook her head hopelessly. "Gwendolyn is trying that angle. All put on, of course. At golf," she said tremulously, "she never putts until she has helped all bugs out of the cup with a blade of grass. And yesterday she wouldn't use her fast serve for fear of injuring some gnats."

"Telling blows," I admitted. "I wouldn't have believed her capable of such treachery."

There was a short silence.

"Speaking of treachery," I said thoughtfully, "what about framing her? A few spiders, dead of unknown causes on the sun porch. Her initialed handkerchief found near by—"

"Oh, no! We couldn't."

"Well then, look," I said. "Bill is a scientist. All great men owe everything to their wives. Well-known fact. Why not start early? Help him with his work, I mean."

"But how?" said Molly.

"Oh, lots of things," said I. "Put paperweights on his notes so they won't blow around—"

"But they don't blow around."

"Well, open the windows so they do blow around, *then* put paperweights on them. Keep his pencils sharpened. Wash his microscope. Get him some—what are those things he's studying?"

"Mollusks."

"All right. Get him some mollusks."

"Good idea," said Molly. "I'll do it."

THAT afternoon, about an hour after lunch, Bill was on his way out the front door, with his tennis racket tucked under his arm, when Molly staggered in the back door.

"Oh, Bill," she called. "I've brought you a bucket of clams."

He came back and helped her lift the bucket to the kitchen table.

"I happened to be out on the mud flats," gasped Molly, "and as I had this bucket with me I thought you might like some clams to study."

"Well, well," said Bill, peering into the bucket. "*Venus mercenaria.* Or," he explained to the laity, "young quahogs." He beamed. "Thanks, Molly. Only I wish you hadn't gone to all that trouble."

"It wasn't the least trouble," said Molly. "I'm really fascinated by mollusks and so forth. I've often thought I'd like to study them myself." . . .

Molly was shelling peas when I came into the kitchen and spotted the cherrystones.

"Nice-looking mess of eatin' clams," I observed hungrily, raising my voice to make myself heard over the clacking of my taste buds.

"Yes," said Molly. "Aren't they?"

I had my hand in the table drawer, fishing for the oyster knife, but the tone of this remark brought me up sharply. Its lack of enthusiasm, in the presence of a bucket of cherrystones, was unlike Molly, who is nearly as rabid about sea food, especially clams, as I am.

"Something wrong?" I asked.

"No," said Molly, glumly. "Nothing wrong. Except that those aren't eating clams. They're looking clams. We can't eat any."

"But why not?"

"Because," said Molly, "they're the ones I got for Bill. To study. Your idea. Remember?"

"Oh, is that all?" I said, relieved. "In that case I believe I'll eat one or two. Several. Half a bucket. The other half bucket is for you, of course. Bill's book will merely come out one day later."

"We can't. They have to go back to their folks," said Molly bitterly.

I started violently.

"Folks! Clams have no folks," I said.

"Hah!" said Molly. "Tell Bill that."

"How could clams recognize each other?" I said. "They're all clam-shaped."

"Explain that to Bill," said Molly.

There was a short pause.

"Has he seen the bucket?" I asked.

"He has."

"But not counted them?"

"No-o-o."

"Ah!" said I, triumphantly, pulling two chairs up to the table. "Then suppose we have a small one apiece."

"Oh, we mustn't," said Molly. "Oh, no. We can't. Can we?"

We had a small one apiece.

"Not bad," said Molly.

"Wonderful!"

"Nice and fresh."

"Lovely! Was the tide coming in or going out?"

"Coming in."

"The best time to get clams."

"Or it may have been going out."

"Equally good. My, such a lovely juice."

"Tang of the sea."

"Yes."

"Wouldn't want salt on these."

"No. Not salt. Pepper, perhaps."

Molly got the pepper.

"We've eaten quite a lot," Molly said

COLLIER'S "Remember now, you asked for it!" MISCHA RICHTER

IT TAKES $20,265

TO KEEP A MAN WORKING ON THE RAILROAD

Yes, that's what it costs the railroads to provide each and every one of their 1,350,000 workers with the "tools" of his trade.

Behind the engineers and stenographers, the purchasing agents and ticket agents, the track walkers and tower men . . . everybody who works on the railroads . . . is an investment of more than 27 billion dollars.

These dollars . . . about $20,265 for each employee . . . have provided the tracks, the cars and engines, the repair shops and all the other "tools" which make it possible for American railroad workers to move the greatest volume of traffic the world has ever known . . . with maximum safety, efficiency, and economy . . . and to earn the world's highest railroad wages.

Railroads are being continually improved. More powerful locomotives, freight cars of increased capacity, luxurious streamlined passenger trains, heavier rail, reduction of curves and grades, new signals that increase safety and efficiency—all are being added as fast as materials become available.

To continue to improve America's greatest mass transportation system, the railroads should be allowed to earn enough to supply their workers with even more productive "tools." Only in this way—combining the resources created by the pooled and invested savings of millions of persons with the skill of railroad men and management . . . will the railroads be able to keep on furnishing the low-cost transportation that is essential to the life of the nation.

ASSOCIATION OF AMERICAN RAILROADS

ten minutes later, peering into the bucket.
"Do you think Bill will notice?"
"Highly unlikely."
"Well, then. One more apiece."
At this point I had an inspiration.
"Let's put some crumpled newspaper in the bottom of the bucket," I suggested. "It will lift the clams up higher and look like more."
We spent some moments in rearranging the bucket's contents.
"Why, it looks like a brand-new full bucket," said Molly, happily. "Just pass me that knife, will you?"
We settled down to eating clams. Several times we ate too many and had to add more crumpled newspaper.
"Let's have just one more each," said Molly, finally, "and that's all."
On putting my hand in the bucket, however, I found it to be filled mostly with crumpled newspaper. After some scrabbling around I found one clam.
"Only one clam left," I reported. "The bucket seems to be full of crumpled newspaper."
"One clam?" repeated Molly, horrified. "We've eaten all the clams?"
"Except this one," I nodded, plying the oyster knife. "Here, you might as well have it."
"Oh, no. I couldn't. You—"
At that moment there was a clatter on the front porch, and the front door opened.
"Oh, Lord," said Molly, wringing her hands, "it's Bill."
A chill came over me like a wet bathing suit. Trapped! At any moment Bill would appear to claim his little chums, his clams. I thought wildly of rushing out to the mud flats, gathering another bucket of clams, and rushing back. Not enough time.
"Tell him it was a mercy killing," I urged hoarsely. "Clams despondent—friends gone—their lives hopeless—"
Molly shook her head.
"I've got it," I whispered. "The clams died in their sleep—happy, peaceful—"
"Do you smell clams?" asked Molly suddenly. "Here, let me smell your breath."
I haaahed at her.
"Heavens!"

MOLLY darted into the pantry and reappeared almost at once. I noticed that her breath smelled quite strongly of cloves.
"Here," she said. "Chew these up." And she gave me a handful of cloves. I stuffed them into my mouth as Bill drove up.
His manner as he greeted us seemed a trifle reserved. I had shifted my position to block him at the doorway, hoping to obstruct his view. But I got the impression that he was squinting over my head at the kitchen table, where lay a scene reminiscent of the worst orgies of ancient Rome.
Fortunately, I had had time to concoct a fairly plausible little story involving a rival naturalist. (This rival naturalist, envious of Bill's success with clams, had been hanging around the place in old clothes, watching his chance. Work of a moment for this rival naturalist to slip in, study the clams, eat them, and make good his escape.)
"Hawo," I said, speaking with difficulty on account of the cloves. "Hab a good tennis gabe?"
"Satisfactory," said Bill, shortly, "except for the rain."
"Raib? Wha' raib?"
"The same rain you see just beyond the window."
"Is it raibing?"
"It is."
I swallowed some cloves.
"Ah," said I. "That accounts for your coming home early."
"Yes," said Bill. "But what accounts for that pile of clamshells on the kitchen table?"
"Clamshells?"
"A rather large pile, or mound."
"Are you sure they're clamshells?" asked Molly, uneasily.
"Quite sure," said Bill, frostily. "I have devoted some time to the study of shellfish, and I have advanced to the point where I can tell a clamshell when I see one." He walked over to the table and sat down. I sat down too, and inspected the shells narrowly.
"Looks like the work of a rival naturalist," I hazarded. "Come to think of it, I saw a ruffian-looking character skulking around the outside of the house, carrying a microscope—"
I broke off as a piercing, undulating scream came from the front part of the house. It was the kind of scream ordinarily heard only in horror films, when the heroine happens to run across one of the doctor's experiments that got loose.
"Gwendolyn!" cried Bill, springing up. "Something has her!"

THE workings of Fate (continued the captain) are inscrutable. It is a curious coincidence that the same storm that chased Bill and Gwendolyn home early from the tennis courts should also have been the instrument that brought Jennie to Sea View Inn.
Jennie was a field mouse, and she was trotting home through the sand and tough sea grass, hoping to reach her nice warm burrow ahead of the oncoming storm. This was a matter of some urgency because Jennie was pregnant, and had been for three weeks; which is about par for field mice. Moreover, full responsibility for the forthcoming family would be hers as her no-good husband (a mouse whom her mother had warned her about) had taken up with a low hussy-mouse and was now living in the broom closet of one of New York's most expensive hotels.
The first big raindrops spattered down as Jennie came opposite the Sea View Inn. The front door was open. Many field mice, confronted by such a dilemma, would have wasted valuable time squeaking and running about. Not Jennie. Without any hesitation she scuttled up the front steps, through the door, and into the big hall.
On her left was a small writing room with a large desk against the wall. Jennie trotted under the desk, clambered up in back of the drawers, and settled herself amongst the post cards in the second drawer.
Very cozy—
An hour later, Gwendolyn, having decided to send post cards to several people who were rather hoping for salt-water taffy, pulled open the second drawer. Out hopped Jennie.
It was at this point that Gwendolyn screamed, and Bill bounded into the writing room, closely followed by Molly. Gwendolyn was perched on a chair. Jennie, sensing a lack of cordiality in Gwendolyn's attitude, left by way of the double wicket formed by Bill's and Molly's legs.
"Kill it," bellowed Gwendolyn. "Kill it!" Then, apparently feeling that these directions were not explicit enough, she dredged up from somewhere deep in her consciousness the ancient war cry in the battle between anything small that moves, and man.
"Hit it with a shovel!"
I remember thinking that, one way or another, Gwendolyn had apparently developed some sort of aversion to mice. And, glancing at Bill, I could see that he thought so too. He stared dazedly at Gwendolyn. Romeo might have stared in about the same way if Juliet had suddenly pushed him off the balcony.
"But, Gwendolyn," cried Bill, figuratively picking himself up, "you love mice!"
"Not me," said Gwendolyn, breathing heavily, "I hate mice."
"But you told me you loved mice,"

DEMUTH

Absorbent Filter Pipes

The ONLY FINE PIPES with this Absorbent, Changeable Filter

Changeable, absorbent filter reduces nicotine, tars, flakes, juices; improves tobacco aroma; cools and cleanses the smoke. Change filter when discolored. Box of 25 refills with each pipe.

IMPORTED BRIAR ROOT

WD C

DEMUTH GOLD DOT
Handcrafted pipes with rare natural grain in virgin color. Hand-rubbed finish. 14K gold band 30 shapes. With pipe bag and gift box.
$10

DEMUTH ARISTOCRAT
Beautiful light mahogany finish. Convenient Shur-lock screw mouthpiece insures tight, perfect fit. 30 shapes. In handsome gift box.
$5

ROYAL DEMUTH
Smooth or finely etched pipes in mahogany or walnut finish. Fine rubber or Ambria mouthpieces. 42 shapes. Handsome gift box.
$3.50

argued Bill, puzzled. "Their bright, beady eyes—"

"For that matter," said Gwendolyn, "I told you I loved wasps."

"Don't you?"

"Not so you could notice it," said Gwendolyn, descending from the chair and moving warily toward the front door. "Furthermore, since my two-week vacation is up tomorrow, I might as well tell you that from now on I'm swatting mosquitoes again. I only stopped swatting them because there wasn't another decent tennis player around."

"Is that so?" said Bill, warmly. "Well, in that case our engagement is off."

"What engagement?"

"Our engagement to be married."

"But we're not engaged."

"I was thinking of asking you," said Bill, with dignity.

"Had you done so," said Gwendolyn, "I would have told you that while I deeply appreciated the honor, you could go soak your head. Besides," added Gwendolyn, pulling open the front door, "I am already pledged to another. I am engaged to Harold L. Proctor."

"Harold L. Proctor?"

"Of Proctor Exterminating, Inc."

The door closed.

IT WOULD be natural to assume that, having been spurned by Gwendolyn, Bill would be heartbroken. During the past two weeks, her many lovable qualities—her cannon-ball serve, her crisp fairway shots, her powerful, flat backhand—had twined their way around his heart. Yet, even as the door closed, he was conscious of a certain relief. What one wanted in a wife, Bill reflected, was not the Australian crawl, or a good backhand, but a sweet, gentle nature.

He turned away from the door with a now-where-was-I-oh-yes-those-clamshells look on his face, and I thought it wise to call attention to the mouse, which seemed to me to be acting with considerable *sang-froid*, in view of the fact that we outnumbered it three to one. Instead of hurrying to the coal cellar, and there shivering thankfully for a narrow escape, it was boldly peering at us from the dining-room doorway. Obviously a mouse which would brook no nonsense. I am not ordinarily nervous around animals but I received the distinct impression that it was about to charge.

"Don't worry," said Bill. "I am accustomed to handling all kinds of animals. If necessary, I will get the thumb hold on it."

"The thumb hold?" I inquired. "What's that?"

"A technical hold, much used by veterinarians," explained Bill. "You stick your thumb in the animal's mouth and it can't bite you anywhere else."

"Ingenious," I said, impressed.

"Hold still," whispered Molly, suddenly. "Here he comes!"

Sure enough, the mouse trotted briskly down the hall, passed between us with a preoccupied air, entered the writing room and disappeared under the desk.

This extraordinary behavior was immediately explained by the reappearance of the mouse over the front of the drawer, holding in its mouth what I at first took to be a piece of strawberry, or possibly raspberry, salt-water taffy.

"Babies!" said Molly

"A mother," said Bill, reverently.

"Good Lord!" said I.

Jennie, obviously following a carefully worked-out plan, hopped down and trotted off, carrying the baby by the scruff of the neck.

On inspection, two more babies were found, sleeping on a pile of brightly colored post cards depicting a bathing beauty of rather extreme development and bearing the legend, "I LOVE MY WIFE BUT OH, YOU KID!" The baby mice were greeted warmly by Bill and Molly.

"Aren't they cute!" cried Molly.

"Aren't they!" said Bill.

"So pink!"

"Yes!"

"So tiny!"

"Yes!"

"Such little feet!"

"Yes!"

"Did you ever see anything so cute?"

It developed that neither of them ever had.

"What next?" I asked cautiously. It had occurred to me that standard procedure as regards mice found in desk drawers probably would not be followed. Molly's attitude was definitely pro-mouse, and of course Bill drew no class distinctions whatever between himself and mice. All kinfolk, so far as he was concerned.

"We'll build them a house," Molly decided promptly. "The poor little things."

I felt slightly at sea.

"A house?"

"A small house," Molly explained. "Out of a box."

I saw a new light dawn in Bill's eyes. A sort of pleased, surprised look, as if he had just been stung by one of his favorite wasps.

"We'll put the mother and everybody in it," Molly prattled on happily. "And some cotton, so it will be nice and soft. Or a blanket. No—my old quilted robe will be just the thing. I can buy another one for myself. Now let's see. What else? Oh, yes. Food, of course. Lettuce, toast, oatmeal, corn—"

"Water," suggested Bill, softly, turning his head toward Molly. As they were standing side by side he spoke practically into her hair, and in the process of breathing in to replace the air expelled in saying "water," he caught a whiff of her perfume. He breathed deeply. It was an elusive, haunting scent, subtly suggesting soap, plus, Bill decided, a hint of cloves.

He was drinking in this odor, with his nose as close to her hair as he considered polite, when suddenly he got goose pimples. His breathing became asthmatic and his heart, which a moment before had been ticking off the seconds as regularly as anybody's, moved into high gear. Love, like a five-pound sandbag, had come to William.

"Molly," he choked, "will you go swimming with me tomorrow?"

"I would like to," said Molly, regretfully, "but I don't know how to swim."

"I will teach you," said Bill.

"AND that," concluded the captain, "is the story of the mouse you just saw go in that doorway—one of Jennie's babies, now grown to a sturdy, useful mousehood. In gratitude for having brought the two young lovers together (for Bill and Molly are now married) they were given the run of the house."

"Bill and Molly?"

"No. The mice. As you are an animal lover yourself, you will enjoy meeting them."

"The mice?"

"No. Bill and Molly. Though, of course, you will meet *them*, too. When you do, notice how glossy their hair is. It's really surprising how clean they keep themselves."

"Bill and Molly?"

"No. The mice."

The young man stirred uneasily in his rocker.

"Altogether," summed up the captain, "your stay at Sea View Inn should be a most enjoyable one. The climate is salubrious in the extreme. At home, for instance, I am troubled with my throat which becomes husky from too much talking. Down here at the seashore, on the other hand, I can talk all I want with no ill effects."

"On yourself, you mean," muttered the young man.

Collier's believes...

THIS MUST BE STOPPED

IN NEXT WEEK'S COLLIER'S Amy Porter begins the story of the firetrap schools to which we send our children.

The record is not reassuring. In the United States and Canada we have seven school fires every day. Seven is, of course, the daily average. Every day the menace continues.

Few communities have done what common sense and the National Board of Fire Underwriters tell us is essential if our children are to be protected. We are negligent because no spectacular sacrifices of children have recently been made. Those communities that have seen children burned to death in combustible schools are more alert.

A dreadful catastrophe is one way of arousing public opinion to take the necessary steps for self-protection. Forty-five years ago Chicago suffered the worst theater fire on record, so far as the killing of children in peacetime is a measure.

When a stage curtain of the Iroquois Theater burned, hundreds of children died. The building was intact but six hundred and two women and children were trampled to death.

The consequence is that Chicago is now and has been during the past 45 years a pioneer in the protection of theaters against fire hazards. Surely we do not require that kind of stimulation to persuade us to insist that our school buildings be made safe for our children.

We suggest that you read Amy Porter's two articles and then find out what is the situation in your own schools. Go to your parent-teacher association.

Talk to your child's teacher or the principal of his school. Ask some fire-insurance agent to give you the facts if he has them or can get them from the Underwriters Laboratories. Talk to your firemen.

Possibly you will learn that your community is the exception and that all possible is already being done to avoid the hazard of fire. Maybe too you will learn that your school and your child are exposed to the common danger. If so you can do something about it.

Ask your board of education to mend the school building in the interest of safety from fire.

Possibly your board of education is willing to make these improvements if it is convinced that public-opinion will support the expenditure.

In case your board of education is hesitant, go again to your parent-teacher association, to the service clubs in your community, to your newspaper and to all others willing to co-operate in a good cause.

With such backing you will find it easy to persuade school trustees who are properly sensitive about not spending public money recklessly.

But whether it is easy or hard to stimulate local authorities to action, we must insist that whatever is necessary be done to render safe the buildings into which the law requires us to send our children for schooling. . . . W. L. C.
